Foreword	xi
1 On the contributions of Dinar Camotim to the advancement of thin-walled member analysis and design	1
<i>Rodrigo Gonçalves, Nuno Silvestre, André Dias Martins, Cilmar Basaglia, Pedro Borges Dinis and Alexandre Landesmann</i>	
1.1 Introduction	1
1.2 Stability and second-order analysis of pitched-roof steel frames	4
1.3 Lateral-torsional stability of I-section web-tapered steel beams	5
1.4 Generalised Beam Theory (GBT)	6
1.5 Behaviour, failure and Direct Strength Method (DSM) design of cold-formed steel members	15
1.6 Concluding remarks	29
Acknowledgements	30
References	30
2 Recent developments in the direct strength method localised loading design of cold-formed steel sections	37
<i>Gregory J. Hancock, Zhehang Chen, Yiyu Xie and Cao Hung Pham</i>	
2.1 Introduction	37
2.2 Elastic buckling loads	40
2.3 Yield loads	45
2.4 Conclusions	49
References	50
3 Stability and design of steel equal-leg angle section beam-columns	53
<i>Behnam Behzadi-Sofiani, M. Ahmer Wadee and Leroy Gardner</i>	
3.1 Introduction	53
3.2 Elastic critical buckling	53
3.3 Eurocode 3	60
3.4 Philosophy of new proposals	69
3.5 Outlook	80
3.6 Conclusions	81
References	82

4	Fire design of steel beam-columns with thin-walled I-shaped cross sections	85
	<i>Carlos Couto, Paulo Vila Real and Nuno Lopes</i>	
4.1	Introduction	85
4.2	The interaction curve of Eurocode 3 for fire design of beam-columns	86
4.3	A brief overview of local buckling, flexural buckling and lateral-torsional buckling at elevated temperatures	88
4.4	Numerical study	92
4.5	Comparison between EN 1993-1-2 and FprEN 1993-1-2	111
4.6	Conclusions	122
	Acknowledgements	123
	References	123
5	Application of the <i>Modal</i> finite strip method for studying the buckling behaviour of cylindrical tubes	127
	<i>M. Khezri and K.J.R. Rasmussen</i>	
5.1	Introduction	127
5.2	Finite strip buckling analysis	129
5.3	Modal finite strip method (<i>mFSM</i>)	137
5.4	Illustrative numerical examples	164
5.5	Conclusion	175
	Acknowledgements	176
	References	176
6	Structural behaviour of LSF wall studs subject to distortional buckling under standard fire exposure	179
	<i>Tharindu Abeysiriwardena and Mahen Mahendran</i>	
6.1	Introduction	179
6.2	Experimental testing	181
6.3	Development and validation of numerical models	188
6.4	Parametric study and development of fire design equations	204
6.5	Conclusions	220
	Acknowledgements	221
	References	221
7	Nonlinear interactive buckling phenomena in plated structures: Recent advances in energy methods	225
	<i>M. Ahmer Wadee and Anton Köllner</i>	
7.1	Introduction	225
7.2	Global and local buckling mode interaction	226
7.3	Mode interaction and jumping in plates	232
7.4	Concluding remarks and outlook	241
	References	243

8	Practical design of complex steel members	247
	<i>Luís Simões da Silva</i>	
8.1	Introduction	247
8.2	Design approaches	248
8.3	Why is it complex to design nonprismatic members	250
8.4	Design methodology: background and application rules	256
8.5	Practical application: design examples	263
8.6	Outlook	276
	Acknowledgements	277
	References	277
