Preface	vii
1. Cervical cytology: basic considerations	1
Magnitude of the problem of cervical cancer	1
Rationale for cervical cytology screening	1
Economic considerations	2
Time considerations	4
Role of cervical cytology screening	4
2. Collection of smears	6
Options for organization of smear collection	7
Taking of smears	8
Transport of slides	10
Follow-up of patients with normal smears	12
Follow-up of patients with abnormal smears	12
Follow-up protocols	12
For patients with abnormal clinical findings	13
For patients with inconclusive or unsatisfactory cytology	13
For patients with normal cytology	13
For patients with cytology report negative for neoplasia but revealing a marked inflammatory reaction	13
For patients with abnormal cytology	13
Referral facilities required for follow-up	14
3. The cytology laboratory and examination of smears	15
Responsibilities of the laboratory	18
Laboratory design	18
Standard processing procedures	19
Cytological examination	19
Procedures to be followed for abnormal smears and in special circumstances	19

Reporting of smears	20
Quality control	23
Records and data flow	24
4. Diagnosis, treatment, and follow-up	29
Tissue diagnosis	29
Directed punch biopsy	30
Endocervical curettage	30
Cone biopsy	31
Endometrial biopsy	31
Clinical evaluation	31
Norms of treatment	32
Systematic follow-up	35
5. Monitoring and evaluation of the system	36
Efficiency (procedural)	36
Effectiveness (outcome)	36
6. Common faults in screening programmes and suggested solutions	38
7. Personnel	40
Types of personnel required	40
Smear-taking centre	40
Cytology laboratory	40
Training of personnel	42
Smear-taking centre	42
Cytology laboratory	42
Staff requirements	43
Smear-taking centre	43
Cytology laboratory	43
8. Equipment and supplies	45
Smear-taking centre	45
Cytology laboratory	45
Further reading	48
Annex 1. Approximate cost of some essential supplies needed for a cytology laboratory	50
Annex 2. Preparation of stains for cervical cytology	51
