Preface	1
1 Getting started	5
1.1 What can be forecast?	6
1.2 Forecasting, goals and planning	8
1.3 Determining what to forecast	8
1.4 Forecasting data and methods	9
1.5 Some case studies	12
1.6 The basic steps in a forecasting task	14
1.7 The statistical forecasting perspective	15
1.8 Exercises	17
1.9 Further reading	17
1.10 Used modules and classes	18
2 Time series graphics	19
2.1 DataFrame objects	19
2.2 Time plots	30
2.3 Time series patterns	31
2.4 Seasonal plots	34
2.5 Seasonal subseries plots	39
2.6 Scatterplots	44
2.7 Lag plots	50
2.8 Autocorrelation	52
2.9 White noise	53
2.10 Exercises	55
2.11 Further reading	58
2.12 Used modules and classes	58
3 Time series decomposition	59
3.1 Transformations and adjustments	59
3.2 Time series components	65
3.3 Moving averages	69
3.4 Classical decomposition	76
3.5 Methods used by official statistics agencies	78
3.6 STL decomposition	79

3.7	Exercises	82
3.8	Further reading	84
3.9	Used modules and classes	84
4	Time series features	85
4.1	Some simple statistics	85
4.2	ACF features	86
4.3	STL Features	88
4.4	Other features	91
4.5	Exploring Australian tourism data	92
4.6	Exercises	96
4.7	Further reading	98
4.8	Used modules and classes	98
5	The forecaster's toolbox	99
5.1	A tidy forecasting workflow	99
5.2	Some simple forecasting methods	102
5.3	Fitted values and residuals	109
5.4	Residual diagnostics	110
5.5	Distributional forecasts and prediction intervals	117
5.6	Forecasting using transformations	125
5.7	Forecasting with decomposition	127
5.8	Evaluating point forecast accuracy	130
5.9	Evaluating distributional forecast accuracy	138
5.10	Time series cross-validation	143
5.11	Exercises	146
5.12	Further reading	150
5.13	Used modules and classes	150
6	Judgmental forecasts	151
6.1	Beware of limitations	152
6.2	Key principles	153
6.3	The Delphi method	157
6.4	Forecasting by analogy	159
6.5	Scenario forecasting	160
6.6	New product forecasting	161
6.7	Judgmental adjustments	163
6.8	Further reading	165
6.9	Used modules and classes	166
7	Time series regression models	167
7.1	The linear model	167
7.2	Least squares estimation	174
7.3	Evaluating the regression model	178
7.4	Some useful predictors	185
7.5	Selecting predictors	193
7.6	Forecasting with regression	198
7.7	Nonlinear regression	203
7.8	Correlation, causation and forecasting	208

7.9	Matrix formulation	212
7.10	Exercises	214
7.11	Further reading	216
7.12	Used modules and classes	217
8	Exponential smoothing	219
8.1	Simple exponential smoothing	220
8.2	Methods with trend	227
8.3	Methods with seasonality	234
8.4	A taxonomy of exponential smoothing methods	241
8.5	Innovations state space models for exponential smoothing	244
8.6	Estimation and model selection	247
8.7	Forecasting with ETS models	251
8.8	Exercises	254
8.9	Further reading	257
8.10	Used modules and classes	257
9	ARIMA models	259
9.1	Stationarity and differencing	259
9.2	Backshift notation	267
9.3	Autoregressive models	268
9.4	Moving average models	270
9.5	Non-seasonal ARIMA models	272
9.6	Estimation and order selection	278
9.7	ARIMA modelling in statsforecast	280
9.8	Forecasting	289
9.9	Seasonal ARIMA models	292
9.10	ARIMA vs ETS	304
9.11	Exercises	313
9.12	Further reading	318
9.13	Used modules and classes	318
10	Dynamic regression models	319
10.1	Estimation	320
10.2	Regression with ARIMA errors using StatsForecast	321
10.3	Forecasting	325
10.4	Stochastic and deterministic trends	332
10.5	Dynamic harmonic regression	336
10.6	Lagged predictors	338
10.7	Exercises	342
10.8	Further reading	344
10.9	Used modules and classes	344
11	Forecasting hierarchical and grouped time series	345
11.1	Hierarchical and grouped time series	346
11.2	Single level approaches	360
11.3	Forecast reconciliation	365
11.4	Forecasting Australian domestic tourism	370
11.5	Reconciled distributional forecasts	374

11.6 Forecasting Australian prison population	375
11.7 Exercises	383
11.8 Further reading	384
11.9 Used modules and classes	384
12 Advanced forecasting methods	385
12.1 Complex seasonality	385
12.2 Prophet model	394
12.3 Vector autoregressions	401
12.4 Bootstrapping and bagging	406
12.5 Exercises	411
12.6 Further reading	412
12.7 Used modules and classes	412
13 Some practical forecasting issues	413
13.1 Weekly, daily and sub-daily data	413
13.2 Time series of counts	416
13.3 Ensuring forecasts stay within limits	419
13.4 Forecast combinations	421
13.5 Backcasting	426
13.6 Very long and very short time series	427
13.7 Dealing with outliers and missing values	428
13.8 Further reading	431
13.9 Used modules and classes	432
14 Neural networks	433
14.1 Neural forecasting	433
14.2 Multilayer perceptron	435
14.3 Modern neural network architectures	438
14.4 Scaling the data	440
14.5 Optimisation objectives	442
14.6 Exogenous variables	444
14.7 Hyperparameter optimisation	446
14.8 Exercises	450
14.9 Further reading	450
14.10 Used modules and classes	450
15 Foundation forecasting models	451
15.1 Introduction	451
15.2 Transfer learning	453
15.3 Overview of foundation models	454
15.4 Example: electricity price forecasting	460
15.5 Further reading	467
15.6 Used modules and classes	467
Bibliography	469
