

Obsah:

Surový P.: 3D forestry: Data, models, decisions.....	3
Kuželka K., Marušák R.: Local models of aboveground biomass for European beech based on variables obtainable from terrestrial digital imagery	9
Kuželka K., Marušák R.: Local models of aboveground biomass for Sessile oak based on variables obtainable from terrestrial digital imagery	21
Šálek L., Psotová H.: Gravel-pit reclamation – case study of creation of multifunctional riparian landscape.....	33
Tauber R.: DSC biomasa – zjištění parametrů pro odvození množství biomasy korun listnatých stromů	39
Čihák T., Marušák R., Tipmann L., Stolariková R.: Evaluation of measurement precision for dendrometric quantities with software dendroscanner for small linden tree (<i>Tilia cordata</i> Mill.)61	
Pajtlík J., Konôpka B., Bošela M., Šebeň V.: Allometric models for young <i>Acer pseudoplatanus</i> , <i>Fagus sylvatica</i> and <i>Fraxinus excelsior</i> trees in Central Slovakia – their constructions and scientific implementations	69
Dinis C.: Roots – the belowground biomass of forests	83
Opiňár R., Bahýľ J., Sedmák R., Fabrika M., Tuček J.: Growth simulator Sibyla as a tool for sustainable forests management.....	97
Vopěnka P., Kuželka K., Marušák R., Kašpar J.: Biomass volume estimation using LiDAR and terrestrial measurements	103
