PREFACE.....	3
1 Rainwater management in condition of climatic change.....	6
1.1 Introduction.....	6
1.2 Climatic change.....	6
1.3 Hydrology cycle.....	9
1.4 Stormwater.....	13
1.5 Case study.....	16
2 Rainwater treatment.....	26
2.1 Characteristic of rainwater pollutions.....	26
2.2 Selected types of objects and facilities used for rainwater treatment.....	27
2.3 Compact device for pretreatment of rainwater.....	30
3 Technical and aesthetic aspects in designing of open rainwater tanks.....	33
3.1 Introduction.....	33
3.2 Functions and constructions of rainwater reservoirs.....	33
3.3 Solutions of the open rainwater reservoirs.....	34
3.4 Naturalization of objects of the rainwater retention.....	36
4 Green roofs as a part of sustainable rainwater management.....	40
4.1 Introduction.....	40
4.2 The types of green roofs.....	42
4.3 Reducing stormwater runoff from green roofs.....	51
5 Methods and nomographs for sizing storage reservoirs in sewage systems.....	55
5.1 Introduction.....	55
5.2 Rainwater outflow and retention in urban catchment.....	56
5.3 Sewage accumulation in storage reservoirs.....	61
5.4 Methods and nomographs for sizing storage reservoirs.....	63
5.5 Economic aspects of applying multi-chamber reservoirs and conclusions.....	71
6 Stream regulation and revitalization.....	75
6.1 Introduction.....	75
6.2 Small river regulation.....	75
6.3 Torrent regulation.....	84
6.4 River revitalization.....	88
7 Stability of the channels and river banks.....	95
7.1 Introduction.....	95
7.2 Methods of channels stability assessment.....	95
7.3 Methods of nonscouring velocities.....	96
7.4 Application of method nonscouring velocities to specific case.....	104
7.5 Pre-design of the bankside vegetation.....	108
