PREFACE	7
1. NATURAL CONDITIONS	9
1.1 Geography and outline of natural conditions	9
1.1.1 Broader territorial relations	9
1.1.2 Abiotic environment – Basic characteristics	11
1.1.3 Biota	13
1.1.4 South Carpathian biogeographical subprovince	15
1.2 Geology and soils	17
1.2.1 Geological and soil characteristics in a broader context	17
1.2.1.1 Historico-geological evolution and geological composition	17
1.2.1.2 Formation and development of soils	19
1.2.1.2.1 Taxonomy of soils	20
1.2.1.3 Organic matter of soils in the surroundings of Sfânta Elena	23
1.2.2 Soils in the surroundings of Sfânta Elena: an abstract from our research results	23
1.2.2.1 Representative soil profiles	25
1.2.2.2 Topsoil characteristics	28
2. HUMANS IN THE LANDSCAPE	33
2.1 The history and present of Czech settlements in the Romanian Banat	33
2.2 People in the Landscape, Landscape in the People: Local Names in the Area of Sfânta Elena	49
2.3 Vernacular architecture in Czech villages	52
2.3.1 Introduction	52
2.3.2 Hitherto research	53
2.3.2.1 Vernacular architecture of Czech villages in Banat	53
2.3.2.2 Sources	54
2.3.3 Urbanism	54
2.3.3.1 Sfânta Elena (Svatá Helena)	56
2.3.3.2 Gârnic (Gerník)	56
2.3.3.3 Ravensca (Rovensko)	62
2.3.3.4 Bigar (Bígr)	67
2.3.4 Structures	68
2.3.4.1 Homesteads and their parts	68
2.3.4.2 Development of the layout of dwelling houses and homesteads	70
2.3.4.3 Other important structures	76
2.3.5 Technical aspects of building culture	77
2.3.5.1 Building constructions and materials	77
2.3.5.2 Archaisms	79
2.3.6 Current problems	81
2.3.7 Conclusion	82
2.3.8 GPS coordinates of surveyed objects	82
2.4 Traditional fruit varieties in the Czech villages in Banat	84
2.4.1 Introduction	84
2.4.2 Characteristics of fruit growing	85
2.4.3 Traditional varieties and landraces	87
2.4.4 Apple varieties	89
2.4.5 Pear varieties	94
2.4.6 Conclusions	97

3. GEOINFORMATION SUPPORT OF LAND USE/LAND COVER MAPPING	98
3.1 Spatial data acquisition	98
3.2 Remote sensing in land use mapping	99
3.3 Methods	102
3.3.1 Manual Vectorisation	102
3.3.2 Object-Oriented Classification	102
3.3.3 Accuracy Assessment of Results	104
3.4 Results	104
3.5 Discussion	106
3.6 Conclusion	106
4. FLORISTIC CHARACTERISATION OF BIOTOPE TYPES	113
4.1 Introduction	113
4.2 Overview and characteristics of biotope types	114
4.2.1 Rocks [1]	114
4.2.2 Forests [2]	115
4.2.3 High mesophilous shrubs [3]	117
4.2.4 Orchards [4]	117
4.2.5 Grasslands and pastures [5]	118
4.2.6 Wetlands and spring areas [6]	118
4.2.7 Line grass-herbaceous communities of country roads and balks [7]	119
4.2.8 Abandoned areas [8]	119
4.2.9 Arable land [9]	120
4.2.10 Settlements [10]	120
5. GRASSLAND	144
5.1 Semi-natural dry grasslands of the White Carpathians and the Banat region: A comparison of the floristic composition and species richness	144
5.1.1 Introduction	144
5.1.2 Material and methods	145
5.1.2.1 Study sites	145
5.1.2.2 Data collection	147
5.1.2.3 Data analysis	147
5.1.3 Results	147
5.1.4 Discussion	151
5.1.5 Conclusion	152
5.2 Patterns of grazing and plant species diversity in the pasturelands	153
5.2.1 Introduction	153
5.2.2 Methods	154
5.2.2.1 Data collection	154
5.2.2.2 Data analysis	155
5.2.3 Results	156
5.2.3.1 Inter-annual variability of grazing pressure	156
5.2.3.2 Variables influencing the grazing damage	158
5.2.3.3 Structure, species composition and main factors influencing the vegetation	158
5.2.3.4 Species richness	159
5.2.4 Discussion	161
5.2.4.1 Suitable indicator of grazing intensity	161
5.2.4.2 Species composition and diversity	162
5.2.5 Conclusions	163
5.3 Consequences of arable land abandonment for the diversity of plant communities	164
5.3.1 Introduction	164
5.3.2 Methods	168
5.3.2.1 Data collection	168

5.3.2.2 Data analysis/statistics	169
5.3.3 Results	170
5.3.4 Discussion	173
5.3.5 Conclusions	174
5.4 Ants and plant species diversity in the carst grasslands	176
5.4.1 Introduction	176
5.4.2 Methods	178
5.4.3 Results	178
5.4.3.1 Ants	178
5.4.3.2 Plant assemblages	180
5.4.4 Discussion	180
5.4.5 Preliminary conclusions	182
5.5 Beetles of grasslands	183
5.5.1 Introduction	183
5.5.2 Material and methods	183
5.5.3 Results	185
5.5.3.1 Meadows and pastures	192
5.5.3.2 Fields and fallow land	196
5.5.3.3 Road margins	197
5.5.3.4 Rocks	198
6. FORESTS	201
6.1 Woody plants composition of forests	201
6.1.1 Introduction	201
6.1.2 Alluvium of the Danube River and adjacent areas	201
6.1.3 Thermophilous oak woods	202
6.1.4 Oak woods and oak-beech woods	205
6.1.5 Beech woods	209
6.2 Structure of forest stands in the landscape with active coppice management	211
6.2.1 Introduction	211
6.2.2 Methods	212
6.2.2.1 Selection of research plots for data collection	212
6.2.2.2 Collection of data in the research plot	212
6.2.2.3 Data assessment	212
6.2.3 Results and discussion	213
6.2.3.1 Classification in the individual structural types of forest stands	213
6.2.3.2 Tree layer species composition of individual structural types	215
6.2.3.3 The influence of the accessibility of plots and terrain relief on the occurrence of structural types	219
6.2.4 Conclusion	219
6.3 An example of coppice management	220
6.3.1 Introduction	220
6.3.2 Terminology	220
6.3.3 Location and characteristics of research plots	221
6.3.4 Methods	223
6.3.5 Results and discussion	224
6.3.5.1 Management method, logging and character of stands	224
6.3.5.2 Harvested timber	226
6.3.5.3 Composition and structure of the coppice stand	229
6.3.5.4 Conclusion	231
6.4 Herb layer in coppices and high beech forests	233
6.4.1 Introduction	233
6.4.2 Material and methods	234
6.4.2.1 The locality and its natural conditions	234
6.4.2.2 Data collection	235

6.4.2.3 Data analysis	235
6.4.3 Results	236
6.4.3.1 Species richness	236
6.4.3.2 Species composition	236
6.4.4 Conclusion	239
6.5 Beetles of forests	240
6.5.1 Material and methods	240
6.5.2 Results	240
7. LANDSCAPE	251
7.1 Landscape types classification	251
7.1.1 Introduction	251
7.1.2 Methodology	251
7.1.3 Results	252
7.1.4 Conclusion	254
7.2 Geobiocoenological landscape typology	257
7.2.1 Introduction	257
7.2.2 Methods	258
7.2.3 Results	258
7.2.3.1 Vegetation tiers	258
7.2.3.2 Ecological series	260
7.2.3.3 Groups of geobiocene types	261
7.2.4 Discussion	274
7.2.5 Conclusion	275
7.3 The development of land use and landscape structure	277
7.3.1 Introduction	277
7.3.1.2 The historical context of landscape change	277
7.3.2 Methods and data	278
7.3.3 Results	280
7.3.3.1 Landscape scale land use changes	280
7.3.3.2 Changes in landscape structure	288
7.3.3.3 Landscape changes at the local scale	289
7.3.4 Discussion	290
7.3.5 Conclusion	291
7.4 Local ecological network	292
7.4.1 Introduction	292
7.4.2 Methodology	292
7.4.3 Current state of vegetation	293
7.4.3.1 Types of biotopes	294
7.4.3.2 Biotope complexes	298
7.4.3.3 Line communities	299
7.4.4 Ecologically significant landscape segments	301
7.4.4.1 Ecologically significant landscape area	301
7.4.4.2 Ecologically significant landscape units	301
7.4.4.3 Ecologically significant landscape elements	305
7.4.5 Conclusion	305
7.5 Monumental and sizeable trees	310
7.5.1 Introduction	310
7.5.2 Methods of the inventory of monumental trees in a model area	310
7.5.3 Results	311
7.5.4 Discussion	320
7.5.5 Conclusion	324
7.6 Globalization and wind power plants	325
8. REFERENCES	331
