Series Editor's Preface	IX
Preface	XI
CHAPTER 1. <i>Discrete Signals and Systems</i>	1
1.1. Introduction	1
1.2. $\mathcal{Z}$ Transform	5
1.3. Methods of the Analysis of Discrete Signals and Systems	10
CHAPTER 2. <i>Properties of the $\mathcal{Z}$ Transform</i>	14
2.1. Fundamental Theorems on the $\mathcal{Z}$ Transform	14
2.1.1. Linearity of the Transform	14
2.1.2. Translation of a Sequence	16
2.1.3. Change of Subscript of a Sequence	18
2.1.4. Similarity of Transforms	20
2.1.5. Convolution of Sequences	21
2.1.6. Transforms of Differences	23
2.1.7. Transform of the Sequence of Partial Sums	24
2.1.8. Differentiation of the Transform of a Sequence	26
2.1.9. Integration of the Transform of a Sequence	27
2.1.10. Differentiation with Respect to a Parameter	27
2.1.11. Integration with Respect to a Parameter	28
2.1.12. Limit of the Sequence of Partial Sums	29
2.1.13. Limit Values of the Object Function	30
2.2. Inverse $\mathcal{Z}$ Transform	31
2.2.1. Inverse Transform with the Aid of Integration	33
2.2.2. Inverse Transform with the Aid of Differentiation	37
2.3. Transform of the Product of Two Sequences	44
2.3.1. Transform of a Correlation Sequence	47
2.4. Two-Sided $\mathcal{Z}$ Transform	50
2.4.1. Inverse Two-Sided $\mathcal{Z}$ Transform	57
2.4.2. Inverse Two-Sided Transform with the Aid of Differentiation	61

CHAPTER 3. <i>Application of the $\mathcal{Z}$ Transform to the Analysis of Linear Discrete Systems</i>	66
3.1. Solution of Difference Equations	66
3.1.1. Summation of Series	71
3.1.2. Chain of Two-Ports	74
3.2. Transfer Function of a Discrete System	80
3.2.1. Stability and Causality of Discrete Systems	83
3.2.2. Frequency Characteristics of Linear Discrete Systems	87
3.3. Application of the $\mathcal{Z}$ Transform to the Analysis of Impulse Systems	91
3.3.1. Response of a System to a Sequence of Rectangular Impulses	95
3.3.2. Evaluation of the Response of a System at an Arbitrary Point	99
3.3.3. Evaluation of the Response at Equidistant Points	102
CHAPTER 4. <i>Application of the $\mathcal{Z}$ Transform to the Simulation of Continuous Systems</i>	106
4.1. Simulation in the Time Domain	106
4.1.1. Simulation Based on the Principle of the Invariance of the Response	107
4.1.2. Approximation of the Convolution Integral	112
4.1.3. Numerical Inverse Laplace Transform	114
4.1.4. Error Estimate of Simulation in the Time Domain	118
4.1.5. System Identification from Its Time Response	120
4.2. Simulation in the Frequency Domain	123
4.2.1. Frequency Properties of Signal Invariant Transfer Functions	126
4.2.2. Bilinear Transformation	133
4.3. Application of the $\mathcal{Z}$ Transform in Numerical Calculus	140
4.3.1. Numerical Integration	142
4.3.2. Numerical Differentiation	149
CHAPTER 5. <i>Application of the $\mathcal{Z}$ Transform to the Analysis of Digital Filters</i>	155
5.1. Realization of the Transfer Function of a Digital Filter	155
5.1.1. Digital Filters with Infinite Impulse Response	160

5.1.2. Digital Filters with Finite Impulse Response	162
5.1.3. Computation of Frequency Characteristics of Digital Filters	164
5.2. Analysis of Digital Filters	169
5.2.1. Matrix Representation of Digital Filters	169
5.2.2. Representation of Digital Filters by Signal-Flow Graphs	171
5.2.3. Transformation of Tabular Representation of a Signal-Flow Graph into a Matrix Equation	175
5.2.4. Relation Between Matrix and State Representations of Digital Filters	177
5.2.5. Computation of the Transfer Function of a Digital Filter from Its Time Response	181
5.2.6. Computation of Frequency Characteristics of Digital Filters from Their Time Response	184
 CHAPTER 6. <i>Application of the $\mathcal{Z}$ Transform to the Analysis of Discrete Signals</i>	 187
6.1. $\mathcal{Z}$ Transform and the Discrete Fourier Transform	187
6.1.1. Spectral Characteristics of Discrete Signals	190
6.1.2. Time Varying Spectrum and the Goertzel Algorithm	193
6.1.3. Computation of the Frequency Characteristic of a System from Its Response to a Given Input Signal	197
6.2. Restauration of the Input Signal of a System from Its Response	199
6.2.1. Deconvolution in the Time Domain	201
6.2.2. Deconvolution in the Frequency Domain	202
6.2.3. Application of Linear Prediction to the Construction of the Inverse Transfer Function	203
6.2.4. Homomorphic Filtering of Signals	207
 CHAPTER 7. <i>Appendices</i>	 217
7.1. Properties of the $\mathcal{Z}$ Transform	217
7.2. List of $\mathcal{Z}$ Transforms	219
7.3. Polynomials $N_i(z)$	226
7.4. Proofs of Theorems	229
