

CONTENTS

<i>Preface to the 2nd English edition</i>	V
<i>Contents</i>	VII
<i>Relation of SI units to earlier used units</i>	XIV
PART A—Principles of anchoring structures in rock and soil	1
<i>Chapter 1. Introduction</i>	2
1.1 Treatment of the subject	2
1.2 Principles of anchoring into the ground	3
1.3 Special terms	6
<i>Chapter 2. Securing structures against vertical displacement</i>	8
<i>Chapter 3. Securing structures against overturning</i>	12
<i>Chapter 4. Securing structures against displacement along the foundation line</i>	18
<i>Chapter 5. Securing structures against shear failure along a critical surface in the ground</i>	25
<i>Chapter 6. Stabilization of rocks and the securing of underground structures against caving in</i>	29
<i>Chapter 7. The use of anchors for the preconsolidation of the ground</i>	36
<i>Chapter 8. Effect of anchoring on the seismic stability of structures</i>	38
<i>Chapter 9. Suitability of rocks and soils for anchoring</i>	43
9.1 Types of rocks and soils	43
9.2 Investigation of rocks and soils	47
9.3 Methods of transferring tensile forces to the ground	53
9.3.1 Bracing of anchors	53
9.3.2 Fixing of the anchor by cementing	54
9.3.3 Fixing of the anchor by an abutting base	56
9.4 Evaluation of rocks and soils with regard to anchoring	57

<i>Chapter 10. Embedding depth of anchors in rocks and soils</i>	60
10.1 Anchoring depth in hard rocks	60
10.2 Anchoring depth in damaged or soft rocks	62
10.3 Anchoring depth in non-cohesive soils	65
10.3.1 Anchoring depth in dry loose soils	76
10.3.2 Anchoring depth in saturated loose soils	81
10.4 Anchoring depth in cohesive soils	82
 PART B—Anchor design and anchoring technology	 89
<i>Chapter 11. Materials used in the construction of anchors (tendon material)</i>	90
11.1 Materials for the construction of bar anchors	92
11.2 Prestressing wire	95
11.3 Strands and cables	97
 <i>Chapter 12 Preparation of anchors</i>	 102
12.1 Preparation of bar anchors	102
12.2 Construction of multi-wire anchors	103
12.3 Construction of anchors from strands	106
 <i>Chapter 13 Fixing of anchors in rock and soil</i>	 109
13.1 Mechanical fixing of anchors	109
13.1.1 Fixing by thrust (wedge base)	114
13.1.2 Fixing by tension (tensile base)	114
13.1.3 Fixing by screwing (threaded base)	116
13.1.4 Fixing of hollow bolts by expansion (friction bolts)	120
13.1.5 Controlled yielding bolts	122
13.2 Fixing of anchors with cement	123
13.2.1 Design of anchors fixed with cement	123
13.2.1.1 Cohesion between grout and rock	124
13.2.1.2 Cohesion between grout and soil	128
13.2.1.3 Cohesion between grout and steel components of anchor root	131
13.2.2 Technology of fixing anchors by grouting	138
13.2.2.1 Short bar anchors (bolts)	138
13.2.2.2 Long anchors in hard rock	140
13.2.2.3 Grouted anchors in loose soils	146
13.2.2.4 Grouted anchors in cohesive soils	156
13.2.3 Fixing of anchors with synthetic resins	158
13.2.4 Fixing of anchors by means of both cement and a mechanical base	163

13.3	Fixing of anchors with abutting bases	165
13.3.1	Design of anchors with root bulbs	169
13.3.2	Fixing of the tendon to the bulb	171
13.3.3	Fixing of anchors in concrete structures by means of bulbs	175
13.3.4	Fixing of bulb anchors in rocks	176
13.3.5	Fixing of bulb anchors in non-cohesive soils	176
13.3.6	Fixing of bulb anchors in cohesive soils	179
<i>Chapter 14</i>	<i>Drilling of anchor boreholes</i>	183
14.1	Short boreholes of small diameter	183
14.2	Boreholes of large diameter and length	186
14.2.1	Suitable drilling methods	186
14.2.2	Work rate of the drilling equipment and drillability of rock	189
14.2.3	Flushing	190
14.2.4	The anchoring site	191
14.2.5	Expanding of anchor boreholes	192
14.2.6	Defects of anchor boreholes	195
14.2.7	Permeability of anchor boreholes	196
<i>Chapter 15</i>	<i>Grouts and methods of grouting anchor boreholes</i>	198
15.1	Composition of cement grouts	198
15.2	Preparation of cement grouts	200
15.3	Forwarding of cement mixes into boreholes	201
15.3.1	Hand-filling of boreholes	201
15.3.2	Grouting under pressure	204
<i>Chapter 16</i>	<i>Fixing of anchors to the anchored structure</i>	209
16.1	Anchors fixed by nuts	211
16.2	Locking heads (wedge blocking system)	213
16.3	Immovable anchoring heads	219
16.4	Saddle anchor heads	221
<i>Chapter 17</i>	<i>Prestressing and testing of anchors</i>	223
17.1	Stressing forces	223
17.2	Stressing of production anchors—acceptance tests	224
17.3	Special anchor tests	228
17.4	Tests on rock bolts	231
17.4.1	Destructive tests	231
17.4.2	Non-destructive tests	233
17.5	Requirements of the equipment used for the prestressing and test- ing of anchors	234
17.6	Prestressing techniques	237
17.6.1	Prestressing of bolts	237

17.6.2 Prestressing of bar anchors of high load-bearing capacity	242
17.6.3 Prestressing of cable anchors with locking heads	245
17.6.4 Prestressing of anchors with immovable head fixings	252
<i>Chapter 18 Protection of anchors against corrosion</i>	<i>255</i>
18.1 Principle of corrosion.	255
18.2 Direct protection of anchors against corrosion	260
18.2.1 Anticorrosive protection adhering to the anchor	260
18.2.1.1 Double protection of anchors with reliable ground fixing	261
18.2.2 Anticorrosive protection of anchor tendons	264
18.2.2.1 Free insulating layers for anchor tendons	265
18.2.2.2 Protection of anchor tendons by pipes	271
18.2.3 Waterproof connection of the insulating envelope with the anchor root	273
18.2.4 Anticorrosive protection of anchor heads	276
18.2.5 Anticorrosive protection of anchors of short service life	280
18.2.6 Anticorrosive filling of boreholes	281
18.3 Electrical anticorrosive protection	282
18.3.1 Circuit arrangement in cathodic protection schemes	284
18.3.2 Anodes and sources of electric current	285
18.4 Temporary anticorrosive protection	287
<i>Chapter 19 Long-term observation of anchors</i>	<i>289</i>
19.1 Losses of anchor prestressing with time	289
19.1.1 Relaxation of steel	289
19.1.2 Creep of the ground	290
19.1.2.1 Behaviour of hard rocks	290
19.1.2.2 Creep of soils and soft rocks	292
19.1.3 Observation of prestressing losses caused by relaxation and creep in production anchors	295
19.2 Changes in anchor prestressing due to external factors	296
19.2.1 Shocks occurring in the anchoring medium	296
19.2.2 Variable loading of anchors	298
19.2.3 Changes in temperature and the state of stress of the anchoring medium	298
19.3 Instruments for the measurement of anchor prestressing	299
19.3.1 Mechanical instruments	300
19.3.2 Hydraulic instruments	301
19.3.3 Photoelastic instruments	302
19.3.4 Electrical resistance instruments	302
19.3.5 String instruments	304
19.3.6 Tensiometric instruments	304

PART C — Design and construction of anchored structures	307
<i>Chapter 20 Anchoring of underground excavations</i>	303
20.1 Pressures acting on rock spaces and the calculation of anchorage parameters	308
20.1.1 Rock beam theory	311
20.1.2 Natural arch theory	314
20.1.3 Effect of natural planes of discontinuity	318
20.2 Anchorage design for underground excavations	320
20.2.1 Analytical procedure	321
20.2.2 Empirical procedure	323
20.2.3 New Austrian tunnel driving method	325
20.3 Examples of the anchoring of underground excavations	330
20.3.1 Anchoring of the roof of an excavation	330
20.3.2 Anchoring of communications tunnels	335
20.3.3 Anchoring of small openings, rock pillars, galleries and shafts	342
20.3.4 Stabilization of large underground caverns	345
<i>Chapter 21 Stabilization of rock and soil slopes by anchoring</i>	359
21.1 Calculation of anchoring forces	360
21.1.1 Soil slopes	360
21.1.2 Rock slopes	364
21.1.3 Dimensioning of non-prestressed anchors	374
21.2 Structural anchoring methods	378
21.2.1 Stabilization of slopes	378
21.2.2 Securing of rock blocks	381
21.2.3 Protection of the surfaces of rock slopes	383
21.3 Examples of slope stabilization by anchoring	384
21.3.1 Stabilization using prestressed anchors	384
21.3.2 Stabilization of slopes with non-prestressed anchors	403
<i>Chapter 22 Anchoring of walled excavations</i>	406
22.1 Earth and rock pressures on retaining walls	408
22.1.1 Earth pressure	408
22.1.2 Pressure of hard rocks on retaining walls	414
22.2 Design of anchorage for cased excavations	414
22.2.1 Retaining walls suitable for anchoring	415
22.2.2 Calculation of anchoring forces	420
22.2.2.1 Anchoring forces along one level of the retaining wall	420
22.2.2.2 Anchoring forces along several levels of the retaining wall	422

22.2.3	Stability assessment of anchored retaining walls	422
22.2.3.1	Internal stability	423
22.2.3.2	Verification of internal stability under various anchoring conditions	425
22.2.3.3	External (overall) stability	427
22.3	Examples of anchored walls and the monitoring of their function	428
<i>Chapter 23 Anchoring of slope retaining walls</i>		444
23.1	Calculation of anchoring forces and the design of anchor fixings .	446
23.2	Structural arrangement of anchored slope retaining walls	448
23.2.1	Precast slope retaining walls	449
23.2.2	Cantilever retaining walls	450
23.2.3	Retaining walls on steep slopes	453
<i>Chapter 24 Anchoring of concrete dams</i>		459
24.1	Anchoring of concrete dams by non-prestressed anchorage	459
24.2	Anchoring of concrete dams by prestressed anchorage	461
24.2.1	Design of anchorage for gravity dams	462
24.2.2	Anchoring design for multiple dams	468
24.3	Examples of concrete dams anchored in the bedrock	468
24.3.1	Reconstruction of concrete dams with anchoring in the bedrock	468
24.3.2	Gravity concrete dams anchored in the bedrock	479
24.3.3	Multiple dams anchored in the bedrock	483
24.3.4	Anchoring of weirs and the functional parts of earth dams into the bedrock	486
24.3.5	Anchoring of cofferdams in the bedrock	488
<i>Chapter 25 Anchoring of bridge structures</i>		492
<i>Chapter 26 Anchoring of foundations</i>		497
26.1	Preconsolidation of the substratum under load-distributing found- ations	497
26.2	Foundations loaded by tangential forces	498
26.3	Eccentrically loaded foundations	501
26.4	Anchored blocks under tensile loads	507
<i>Chapter 27 Stabilization of foundation basins and sunken reservoirs</i>		514
<i>Chapter 28 Anchoring of the loading equipment in field tests</i>		523
28.1	Test loading of the foundation ground	523
28.2	Test loading of piles	531
28.3	Shear testing of blocks	538

28.4 Tear testing of rock for the determination of shear strength . . .	539
<i>Chapter 29 Anchoring and the economics and safety of structures . .</i>	<i>542</i>
29.1 Economies in surface structures	542
29.2 Economies in underground structures	548
29.3 Increase of safety	551
