Foreword: Testing General Relativity: Intercalation, Expansion,
Articulation by Peter Galison vii

Introduction 1

Part I: Foundations to 1955

- 1 Gravitational Redshift: Early Efforts to Confirm Einstein’s
Prediction in the Solar Spectrum Prior to 1930 13**
Klaus Hentschel
- 2 Gravitational Bending of Light—Early Attempts to Confirm
Einstein’s Light-Bending Prediction Until 1930 37**
Jeffrey Crelinsten
- 3 Replication in Crisis: The Light Deflection Experiment from
1930 Onward 71**
Daniel Kennefick
- 4 Testing General Relativity on the Largest Scales in the Years
1915–1955: The Dawning of Modern Cosmology 127**
Cormac O’Raifeartaigh
- 5 Black Holes Were Born 145**
Jeroen van Dongen

Part II: Golden Age to Black Holes: 1955–Present

- 6 A Relativistic Renaissance 163**
Clifford M. Will
- 7 Brans–Dicke Theory and the Empirical Renaissance of
General Relativity 185**
Alexander Blum, Roberto Lalli, and Jürgen Renn

- 8 The Pound–Rebka Measurement of Gravitational Redshift
and Its High-Precision Descendants 227**
Brandon R. Brown
- 9 Shifting from Nuclear and Particle Physics: The Contributions
of John Wheeler to Experimental Gravitation 253**
Paul Halpern
- 10 Robert Vessot’s Gravity Probe A: Perfect a Hammer, and
the World Looks Like a Nail 275**
Connemara Doran and David DeVorkin
- 11 Testing General Relativity with Pulsars: From Hulse–Taylor
to the Present 303**
Paulo C.C. Freire and Norbert Wex
- 12 Imaging the Shadow of a Black Hole 329**
Emilie Skulberg
