

Contents

Preface	xiii
Introduction	xv
Chapter 1: The Systems Approach to Control and Instrumentation	1
Chapter Overview	1
Concept of a System	2
Block Diagram Representation of a System	3
Analog (Continuous Time) Systems	5
Linear System Theory: Continuous Time	5
First-Order System	9
Second-Order System	11
Steady-State Sinusoidal Frequency Response of a System	16
State Variable Formulation of Models	17
Control Theory	20
Open-Loop Control	20
Closed-Loop Control	21
Stability of Control System	28
Root-Locus Techniques	29
Robustness of Control-System Stability	31
Closed-Loop Limit-Cycle Control	34
Instrumentation	35
Measurement	36
Issues	36
Systematic Errors	37
Basic Measurement System	39
Sensor	40
Random Errors	42
Signal Processing	45
Filtering	45
Filter-Design Techniques	46

Chapter 2: Discrete Time Systems Theory	51
Digital Subsystem	55
Sinusoidal Frequency Response	56
Discrete Time Control System	63
Closed Loop Control	68
Example Discrete Time Control System	72
Summary	77
 Chapter 3: Electronics Fundamentals	 79
Semiconductor Devices	80
Diodes	83
Rectifier Circuit	85
Transistors	87
Field-Effect Transistors	96
Integrated Circuits	99
Operational Amplifiers	100
Use of Feedback in Op Amps	101
Summing Mode Amplifier	103
Phase-Locked Loop	104
Sample and Zero-Order Hold Circuits	106
Digital Circuits	111
Binary Number System	113
Logic Circuits (Combinatorial)	114
NOT Gate	114
AND Gate	115
OR Gate	117
Combination Logic Circuits	117
Logic Circuits with Memory (Sequential)	119
R–S Flip-Flop	119
JK Flip-Flop	119
Synchronous Counter	120
Register Circuits	121
Shift Register	122
Integrated Circuits	124
The Microprocessor	124
 Chapter 4: Microcomputer Instrumentation and Control	 127
Microcomputer Fundamentals	128
Digital versus Analog Computers	128

Parts of a Computer	129
Microcomputers versus Mainframe Computers	130
Programs	130
Microcomputer Tasks	131
Microcomputer Operations	132
Buses	132
Memory Read/Write	133
Timing	134
Addressing Peripherals	135
CPU Registers	135
Accumulator Register	136
Condition Code Register	136
Microprocessor Architecture	138
Reading Instructions	140
Initialization	141
Operation Codes	141
Program Counter	142
Branch Instruction	143
Jump Instruction	144
Jump-to-Subroutine Instruction	144
Example Use of a Microcomputer	147
Buffer	147
Programming Languages	148
Assembly Language	148
Logic Functions	150
Shift	150
Programming the AND Function	152
Masking	153
Shift and AND	153
Use of Subroutines	153
Microcomputer Hardware	154
Central Processing Unit	154
Memory: ROM	155
Memory: RAM	156
I/O Parallel Interface	156
Digital-to-Analog Converter	156
Analog-to-Digital Converter	159
Sampling	162
Polling	162

Interrupts	163
Vectored Interrupts	163
Microcomputer Applications in Automotive Systems	164
Instrumentation Applications of Microcomputers	166
Digital Filters	168
Microcomputers in Control Systems	170
Closed-Loop Control System	171
Limit-Cycle Controller	171
Feedback Control Systems	171
Table Lookup	173
Multivariable and Multiple Task Systems	175
 Chapter 5: The Basics of Electronic Engine Control	177
Motivation for Electronic Engine Control	178
Exhaust Emissions	178
Fuel Economy	179
Federal Government Test Procedures	180
Fuel Economy Requirements	181
Meeting the Requirements	183
The Role of Electronics	184
Concept of an Electronic Engine Control System	184
Inputs to Controller	187
Output from Controller	188
Definition of Engine Performance Terms	193
Torque	193
Power	196
Fuel Consumption	198
Engine Overall Efficiency	200
Calibration	201
Engine Mapping	201
Effect of Air/Fuel Ratio on Performance	202
Effect of Spark Timing on Performance	203
Effect of Exhaust Gas Recirculation on Performance	204
Exhaust Catalytic Converters	206
Oxidizing Catalytic Converter	206
The Three-Way Catalyst	207
Electronic Fuel-Control System	209
Engine Control Sequence	212
Open-Loop Control	213

Closed-Loop Control	213
Closed-Loop Operation	215
Analysis of Intake Manifold Pressure	219
Measuring Air Mass	220
Influence of Valve System on Volumetric Efficiency	223
Idle Speed Control	224
Electronic Ignition	230

Chapter 6: Sensors and Actuators 233

Automotive Control System Applications of Sensors and Actuators	234
Variables to be Measured	236
Airflow Rate Sensor	236
Pressure Measurements	242
Engine Crankshaft Angular Position Sensor	245
Magnetic Reluctance Position Sensor	247
Hall-Effect Position Sensor	259
Optical Crankshaft Position Sensor	263
Throttle Angle Sensor	265
Temperature Sensors	268
Typical Coolant Sensor	268
Sensors for Feedback Control	270
Exhaust Gas Oxygen Sensor	270
Oxygen Sensor Improvements	274
Knock Sensors	276
Automotive Engine Control Actuators	279
Fuel Injection	284
Exhaust Gas Recirculation Actuator	286
Variable Valve Timing	288
VVP Mechanism Model	290
Electric Motor Actuators	292
Brushless DC Motors	301
Stepper Motors	304
Ignition System	304
Ignition Coil Operations	305

Chapter 7: Digital Powertrain Control Systems 309

Introduction	310
Digital Engine Control	310
Digital Engine Control Features	312

Control Modes for Fuel Control	316
Engine Start	317
Open-Loop Mode	317
Acceleration/Deceleration	317
Engine Crank	319
Engine Warm-Up	320
Open-Loop Control	322
Closed-Loop Control	323
Acceleration Enrichment	328
Deceleration Leaning	328
Idle Speed Control	329
Discrete Time Idle Speed Control	329
EGR Control	335
Variable Valve Timing Control	337
Electronic Ignition Control	343
Closed-Loop Ignition Timing	347
Spark Advance Correction Scheme	353
Integrated Engine Control System	354
Secondary Air Management	354
Evaporative Emissions Canister Purge	355
Automatic System Adjustment	356
System Diagnosis	356
Summary of Control Modes	357
Engine Crank (Start)	357
Engine Warm-Up	357
Open-Loop Control	357
Closed-Loop Control	358
Hard Acceleration	358
Deceleration and Idle	359
Automatic Transmission Control	359
Torque Converter Lock-Up Control	366
Differential and Traction Control	366
Hybrid Electric Vehicle Powertrain Control	368

Chapter 8: Vehicle-Motion Controls 381

Representative Cruise Control System	382
Digital Cruise Control	390
Hardware Implementation Issues	394
Throttle Actuator	396
Cruise Control Electronics	400

Stepper Motor-based Actuator Electronics	401
Vacuum-Operated Actuator	403
Advanced Cruise Control	406
Antilock Braking System	410
Tire-Slip Controller	420
Electronic Suspension System	420
Variable Damping via Variable Strut Fluid Viscosity	442
Variable Spring Rate	443
Electronic Suspension Control System	444
Electronic Steering Control	446
Four-Wheel Steering	449
Summary	457
Chapter 9: Automotive Instrumentation and Telematics	459
Modern Automotive Instrumentation	460
Input and Output Signal Conversion	463
Multiplexing	465
Multirate Sampling	468
Advantages of Computer-Based Instrumentation	469
Display Devices	470
LED	474
LCD	476
Transmissive LCD	480
VFD	480
Flat Panel Display	483
Fuel Quantity Measurement	491
Coolant Temperature Measurement	497
Oil Pressure Measurement	498
Vehicle Speed Measurement	500
High-Speed Digital Communications (CAN)	502
CAN Network	504
Trip Information Computer	507
Telematics	510
GPS Navigation	511
The GPS System Structure	516
Automotive Diagnostics	519
Chapter 10: Diagnostics and Occupant Protection	521
Electronic Control System Diagnostics	522

Service Bay Diagnostic Tool	524
Onboard Diagnostics	525
Model-Based Sensor Failure Detection	526
Diagnostic Fault Codes	529
Onboard Diagnosis (OBD II)	543
Model-Based Misfire Detection System	544
Expert Systems in Automotive Diagnosis	555
Occupant Protection Systems	561
Glossary	569
Quiz questions	573
Index	589
