Preface	xv
1. Clinical Aspects and Prevalence of Venous Thrombosis	1
Terminology	3
The venous system	3
Structure of veins	5
Complications and sequelae of venous thrombosis	7
Phlegmasia caerulea dolens	7
Pulmonary embolism	7
Postphlebitic syndrome	8
Diagnostic techniques	8
Venography	9
¹²⁵ I-labelled fibrinogen uptake	9
Impedance plethysmography	9
Doppler ultrasonography	10
Prevalence	10
Venous thrombosis	10
Pulmonary embolism	11
2. The Haemostatic Mechanism	15
Platelets	17
Structure	17
Platelet prostaglandins	19
Platelet membrane glycoproteins	19
Platelet granules	20
von Willebrand factor	20
Fibronectin	21
Thrombospondin	21
Platelet adhesion and aggregation	21
Platelet adhesion	21
Platelet aggregation	22

Coagulation system	22
Intrinsic and extrinsic pathways of coagulation	23
Coagulation inhibitors.....	26
Antithrombin III	26
Heparin cofactor II	26
Protein C	27
Protein S.....	28
Alpha ₂ -macroglobulin	28
Alpha ₁ -antitrypsin	28
C1 inactivator	28
Vessel wall	29
Antithrombin III	29
Thrombomodulin	30
Prostacyclin	30
Plasminogen activator.....	30
Endothelial cell procoagulant activity.....	31
Summary of haemostatic process.....	31
Fibrinolytic enzyme system	33
Plasminogen	34
Plasminogen activators.....	35
Tissue-type activator.....	35
Urokinase-type activator	36
Action of plasmin on fibrin.....	37
Other actions of plasmin	37
Plasma inhibitors of the fibrinolytic system	37
Alpha ₂ -antiplasmin	37
Plasminogen activator inhibitors	38
Histidine-rich glycoprotein.....	39
Thrombospondin	39
Protein C and fibrinolysis	39
Mechanism of fibrinolysis	40
Plasminogen-independent fibrinolysis	40
Blood viscosity	40
 3. Production of Venous Thrombosis	 49
Structure of thrombi.....	51
Site and origin of thrombosis in deep veins of lower limbs.....	51
Valve pockets	52
Side of thrombosis	53
Fate of thrombi	53
Pathogenesis of venous thrombosis.....	54
Changes in the vessel wall	54
Changes in blood flow	55
Role of coagulation, fibrinolysis and platelets.....	56

4. Genetic, Acquired and Environmental Factors Predisposing to Venous Thrombosis	63
Age.....	65
Venous thrombosis in childhood	65
Sex	67
Blood group	67
Pregnancy and the puerperium	68
Incidence of venous thromboembolism.....	68
Sites of thrombosis.....	69
Factors influencing risk of thromboembolism.....	70
Mechanism of increased risk of venous thrombosis.....	70
Obesity.....	71
Mechanism of possible propensity to thrombosis.....	72
Immobility and posture.....	72
Smoking.....	73
Smoking and haemostatic components and function.....	74
Geographical and ethnic variability	75
Seasonal variation	77
 5. Venous Thrombosis Complicating Disease States.....	 83
Trauma.....	85
Surgery.....	85
Lower-limb fractures	86
Mechanism of increased propensity to thrombosis	88
Leg paralysis.....	89
Mechanisms responsible for high frequency of venous thrombosis in paralysed lower limbs	90
Cardiac disease.....	91
Deep-leg-vein thrombosis following myocardial infarction....	92
Mechanism of increased risk of venous thromboembolism in cardiac disease	93
Malignant disease	94
General increase in venous thrombosis in patients with malignant disease.....	94
Thrombophlebitis migrans associated with carcinoma.....	95
Mechanism of increased thrombotic risk.....	96
Nephrotic syndrome	97
Haemostatic component changes.....	98
Myeloproliferative disorders.....	98
Polycythaemia rubra vera	99
Primary haemorrhagic thrombocythaemia	99
Mechanism of thrombotic tendency in the myeloproliferative disorders	100
Ulcerative colitis.....	101

Ménétrier's disease.....	102
Diabetes mellitus	102
Paroxysmal nocturnal haemoglobinuria	103
Behçet's syndrome	104
Thrombosis in Behçet's syndrome	105
Haemostatic component changes.....	106
Hughes-Stovin syndrome	107
Homocystinuria	107
Sickle cell disease	109
 6. Venous Thrombosis Complicating Drug Therapy and the Use of Venous Catheters.....	 123
Oestrogens including oral contraceptives	125
Epidemiological evidence for an association between oral contraceptive use and venous thromboembolism	126
Thrombotic risk associated with the non-contraceptive use of oestrogens	128
Suppression of lactation	128
Mechanisms of increased thrombotic risk associated with use of oral contraceptives	128
Heparin	129
Corticosteroids	130
Cyclosporin	131
Tamoxifen.....	132
Thrombosis associated with venous catheterization.....	132
The Swan-Ganz catheter.....	134
Transvenous pacemaker catheters	135
Mechanism of thrombus formation in presence of venous catheters	135
Influence of catheter material and coating on incidence of thrombosis.....	135
 7. Venous Thrombosis in Special Sites.....	 143
Thrombosis of the intracranial venous sinuses	145
Retinal-vein occlusion.....	146
Pathogenesis	147
Haemostatic component changes.....	148
Thrombosis of the axillary and subclavian veins.....	148
Primary ('effort') subclavian/axillary-vein thrombosis	149
Renal-vein thrombosis	149
Portal-vein thrombosis	150
Hepatic-vein thrombosis.....	151
Splenic-vein thrombosis.....	152
Mesenteric venous thrombosis.....	152

Superficial thrombophlebitis.....	153
8. Hereditary Deficiencies and Defects in Haemostatic	
Components Predisposing to Thrombosis.....	161
Antithrombin III deficiency	163
Types of deficiency: quantitative and functional.....	163
Type I deficiency	164
Type II deficiency	166
Type III deficiency	166
Association with thrombosis.....	167
Arterial thrombosis	168
Inheritance	168
Incidence	168
Acquired antithrombin III deficiency	169
Assay of antithrombin III.....	169
Influence of oral anticoagulants on the antithrombin III	
level.....	170
Platelet function in familial antithrombin III deficiency	170
Management of antithrombin III deficiency.....	170
Prevention of venous thrombosis in affected individuals ...	170
Treatment of acute thrombotic episodes.....	171
Management in pregnancy.....	172
Heparin cofactor II deficiency	172
Protein C deficiency	173
Association with thrombosis.....	173
Coumarin-induced skin necrosis.....	174
Inheritance	174
Prevalence.....	175
Frequency as predisposing cause of venous	
thromboembolism	175
Types of deficiency.....	176
Features of homozygous deficiency.....	176
Acquired protein C deficiency	177
Assay of protein C.....	178
Immunological assays for protein C antigen	178
Functional assays for protein C activity	178
Criteria for establishing isolated protein C deficiency.....	179
Management of protein C deficiency.....	179
Combined protein C deficiency and dysplasminogenaemia ...	180
Protein S deficiency.....	180
Association with thrombosis.....	180
Acquired protein S deficiency.....	181
Assay of plasma protein S	181
Laboratory diagnosis of isolated protein S deficiency	182

Hereditary dysfibrinogenaemias	182
Types	182
Clinical features.....	183
Association with thrombosis.....	183
Mechanism of thrombotic tendency	184
Laboratory recognition	186
Management of thrombotic tendency	186
Coagulation factor deficiencies	186
Factor VII deficiency	186
Factor XII deficiency	187
Other clotting factor deficiencies.....	187
Hereditary abnormalities of plasminogen.....	188
Molecular defects.....	188
Plasminogen deficiency	189
Defective release of plasminogen activator.....	191
Increased histidine-rich glycoprotein	192
9. Acquired Clotting Abnormalities Predisposing to Thrombosis..	205
Systemic lupus erythematosus.....	207
Thrombosis in systemic lupus erythematosus	207
Mechanism of thrombosis	208
Circulating anticoagulants in systemic lupus erythematosus ..	208
The lupus anticoagulant	209
Nature	209
Site of action	209
Occurrence in disease states.....	210
Association of thrombosis with the lupus anticoagulant	210
Mechanism of thrombotic propensity in the presence of lupus anticoagulant	211
Spontaneous abortion	212
Identification of the lupus anticoagulant in plasma	213
Management of the thrombotic tendency in patients with the lupus anticoagulant	214
10. Prediction of Venous Thrombosis by Use of Haemostatic Component Measurements	219
Haemostatic component changes in patients with recurrent venous thrombosis	221
Platelet function	221
Coagulation mechanism	222
Fibrinolytic system	222
Prospective studies using individual haemostatic component measurements	223
General hospital populations.....	223

Patients undergoing surgery	223
<i>Preoperative measurements</i>	223
Platelet function	224
Fibrinogen	224
Clotting tests	225
Factor V	225
Factor VIII	225
Antithrombin III	225
Protein C	226
Fibrinolytic system	226
Blood viscosity	227
<i>Postoperative measurements</i>	227
Platelet function	227
Fibrinolytic system	227
Prospective studies using combinations of haemostatic and physical variables in preoperative patients	228
Index	235
