
Contents

Dedication	VII
Symbols and Abbreviations	VIII
Preface	IX
1. Introduction	1
2. Principles of Electromagnetic Fields	5
Magnetic Forces and Magnetic Induction	6
Point Charge Force	7
Induction through Closed Surface	8
Vector Potential	9
Magnetic Dipole	10
Induced Electric Field Intensity	10
Induced Electromotive Force in Moving Systems	11
Macroscopic Properties of Magnetic Materials and Magnetic Induction	13
3. Measurement of Electromagnetic Properties of Biological Tissues	20
Electron Spin Resonance Spectroscopy	20
Theoretical Review	20
Instrumentation	23
Nuclear Magnetic Resonance Spectroscopy	25
Nuclear Spin States and Magnetic Moments	25
Energy Absorption and Resonance	27
Instrumentation	28
Hall Effect	30
Magnetic Susceptibility	31
Electromagnetic Fields in Biological Systems <i>in situ</i>	34
4. Regulation of Biological Processes by Electromagnetic Fields	35
Cellular Organisms and Invertebrates	39
Vertebrates	41
Human Biology	48
Calcified Tissue	48
Carcinogenesis and Genetic Alterations	51
Cardiovascular System	54
Therapeutic and Clinical Applications	55
5. Theoretical Modelling	58
Biomembranes	59
Inflammation	67
Carcinogenesis	72

Contents	VI
Calcification	80
Neurobiology	84
6. Bioelectromagnetic Theory	90
References	93
Subject Index	97
