

CONTENTS

1. $1 + 1 = 2$ | 2

Introduction – Early counting systems – Negative numbers and zero – Rational and irrational numbers – Real numbers

2. $\alpha + \beta + \gamma = 180^\circ$ | 18

Introduction – The mathematics of ancient Greece – Euclid and his *Elements* – Regular polygons and tilings – Radian measure – Non-Euclidean geometry

3. $a^2 + b^2 = c^2$ | 36

Introduction – Early results – Proving the Pythagorean theorem – Variations on a theme – Pythagorean triples – Higher powers

4. $C = 2\pi r$ and $A = \pi r^2$ | 58

Introduction – Early values of π – Approximating by polygons – Exact expressions – Infinite series – A miscellany of results – Enter the computer – Circling the Earth

5. $ax^2 + bx + c = 0 \mid 76$

Introduction – Linear equations – Quadratic equations –
Cubic and quartic equations – Higher degrees

6. $\phi^2 = \phi + 1 \mid 96$

Introduction – Some geometry – It's as easy as 1, 1, 2, 3, ... –
Properties of Fibonacci numbers

7. $x^2 = x \mid 116$

Introduction – George Boole – Boole's *The Laws of Thought*
– Set theory – Boolean algebra and switching circuits

8. $M_n = 2^n - 1$ and $F_n = 2^{2^n} + 1 \mid 132$

Introduction – Results on prime numbers – Searching for
primes

9. $C(n, r) = C(n-1, r) + C(n-1, r-1) \mid 150$

Introduction – Arrangements – Combinations – Pascal's
arithmetical triangle – The binomial theorem – Some
applications

10. $V - E + F = 2 \mid 168$

Introduction – Types of polyhedra – Euler's polyhedron
formula – Using Euler's formula

11. $y = mx + c \mid 186$

Introduction – Representing data graphically – Curves and
their equations

12. $\int f'(x) dx = f(x) \mid 208$

Introduction – Differentiation: how quickly things change –
Integration: how large things are – The priority dispute

13. **$\log (a \times b) = \log a + \log b$** | 228

Introduction – Early logarithms – The exponential number e
– Properties of e – Exponential growth – Derangements

14. **$i^2 = -1$** | 248

Introduction – Early difficulties – Complex numbers –
Picturing complex numbers – The fundamental theorem of
algebra – Generalizing complex numbers

15. **$e^{ix} = \cos x + i \sin x$** | 268

Introduction – Euler's equation – Proving Euler's identity –
Some consequences – Who discovered 'Euler's equation'?

16. **$1 + 1/4 + 1/9 + 1/16 + 1/25 + \dots = \pi^2/6$** | 286

Introduction – Infinite series – The zeta function –
Distribution of the primes – The Riemann hypothesis –
Conclusion

17. **$z_{n+1} = z_n^2 + c$** | 304

Introduction – Fractal curves – Towards the Mandelbrot set
– The Mandelbrot set

18. **$\aleph_0 + \aleph_0 = \aleph_0$** | 324

Introduction – Cantor's countable and uncountable sets –
Hilbert's hotel and the arithmetic of infinite quantities – The
continuum hypothesis
