

Contents

1. Classical Mechanics	1-44
1.1 Dalton's Atomic Theory	1
1.2 What are Classical Mechanics and Quantum Mechanics?	2
1.3 J.J. Thomson Model of Atom	4
1.4 Rutherford's Nuclear Model of Atom — Discovery of Nucleus	4
1.5 Developments Leading to The Bohr Model of Atom	6
1.5.1 Dual Nature of Electromagnetic Radiation	7
1.5.2 Emission and Absorption Spectra	21
1.6 Bohr Model of Atom	28
1.7 Sommerfeld Theory or Bohr-Sommerfeld Theory	43
2. Towards Quantum Mechanics	45-57
2.1 Reasons for The Failure of Classical Model of Atom or Bohr Model of Atom	45
2.2 Developments Leading to Quantum Mechanical Model of Atom	45
2.3 De-Broglie's Dual Nature of Matter	46
2.4 Heisenberg's Uncertainty Principle	52
3. Introduction to Quantum Mechanics	58-120
3.1 Necessity of Quantum Mechanics	58
3.2 Schrödinger Wave Equation	59
3.3 Derivation of Time Independent Schrödinger Wave Equation	60
3.4 Physical Significance of Wavefunction (ψ) and Probability Density (ψ^2)	63
3.5 Concept of Atomic Orbital	65
3.6 Quantum Mechanical Model of Atom	67
3.7 Eigen Value and Eigen Wavefunction	67
3.8 Normalised, Orthogonal and Orthonormal Wavefunction	71
3.9 Operators	76
3.10 Postulates of Quantum Mechanics	112
3.11 Derivation of Time Independent Schrödinger Wave Equation on The Basis of Postulates of Quantum Mechanics	115
3.12 Steady State Schrödinger Wave Equation	117
4. Particle in a Box: Quantisation of Translational Energy	121-199
4.1 Application of Postulates of Quantum Mechanics to Simple System	121

4.2	Operation of Quantum Mechanics	121
4.3	Introduction to Translational Motion of a Particle	123
4.4	Particle in One Dimensional Box: Quantisation of Translational Energy	124
4.4.1	Solution of Schrödinger Wave Equation	124
4.4.2	Conclusions from The Study of a Particle in One-Dimensional Box	129
4.4.3	Solution of Properties in One Dimensional Box	138
4.4.4	Application of Particle in a One-dimensional Box	166
4.5	Particle in Two-dimensional Box	175
4.5.1	Two Dimensional Rectangular Box	176
4.5.2	Two Dimensional Square Box (Concept of Degeneracy)	179
4.6	Particle in Three Dimensional Box	184
4.6.1	Three Dimensional Cuboidal Box	185
4.6.2	Three Dimensional Cubical Box (Concept of Degeneracy)	188
4.7	Free Particle	195
4.7.1	Solution of Schrödinger Wave Equation	195
4.7.2	Quantisation of Energy Levels: Difference Between Particle in Free State and Under Bound State	198
5.	Rigid Rotator and Rotational Spectra	200-271
5.1	Introduction	200
5.2	Classical Treatment of Rigid Rotator	200
5.2.1	Kinetic Energy of Rigid Rotator	201
5.3	Quantum Mechanical Treatment: Schrödinger Wave Equation for Rigid Rotator	204
5.3.1	Deriving Schrödinger Equation by Reducing Angular Momentum of Kinetic Energy Operator in Polar Co-ordinates	204
5.3.2	Deriving Schrödinger Equation by Reducing Laplacian of Kinetic Energy Operator in Polar Coordinates	218
5.4	Wavefunction of Rigid Rotator	231
5.4.1	Solving The F Part of Wavefunction i.e. Solving eq. (5.9)	233
5.4.2	Solving The Θ Part of Wavefunction i.e. Solving eq. (5.10)	234
5.4.3	Spherical Harmonics, $Y(\theta, \phi)$	241
5.5	Rotational Energy of the Rigid Rotator	243
5.6	Rotational Energy Levels	252
5.7	Rotational Selection Rules	253
5.8	Rotational Spectra of Rigid Diatomic Molecule	254

5.9	Microwave Active Molecules or Types of Molecules Showing Rotational Spectra	258
5.9.1	How do Microwave Radiation Interact with The Rotating Molecule Having a Permanent Dipole?	258
5.10	Parameters Calculated from Rotational Spectra	260
5.11	Isotopic Effect	268
5.11.1	Application of Isotopic Substitution	269
5.12	Application of Microwave Radiation: Microwave Oven	270
6.	Linear Harmonic Oscillator and Vibrational Spectra	272-325
6.1	Introduction	272
6.2	Classical Treatment of Linear Harmonic Oscillator	273
6.2.1	Frequency of Linear Harmonic Oscillator	274
6.2.2	Effect of Isotopic Substitution on Force Constant and Vibrational Frequency	274
6.2.3	Potential Energy of Linear Harmonic Oscillator	277
6.2.4	Total Energy of The Linear Harmonic Oscillator	278
6.3	Quantum Mechanical Treatment: Schrödinger Wave Equation for Linear Harmonic Oscillator	280
6.4	Solution of Schrödinger Wave Equation: Vibrational Energy and Wavefunction of The Linear Harmonic Oscillator	281
6.4.1	Factorization Method	281
6.4.2	Power Series Method	296
6.5	Wavefunction Plots for Linear Harmonic Oscillator	302
6.6	Probability Plots for Linear Harmonic Oscillator	303
6.7	Symmetry of The Vibrational Wavefunction	305
6.8	Calculation of Properties of Linear Harmonic Oscillator	305
6.9	Orthonormal Sets of Wavefunction	307
6.10	Virial Theorem	309
6.11	Vibrational Energy and Zero Point Energy for Linear Harmonic Oscillator	311
6.12	Vibrational Selection Rule:	313
6.13	Vibrational Spectra of Linear Harmonic Oscillator	318
6.14	Infrared Active Molecules or Types of Molecules Showing Vibrational Spectra	324
7.	“Hydrogen Atom”: Quantisation of Electronic Energy	326-467
7.1	Necessity of Replacing Bohr Theory	326
7.2	Setting of Schrödinger Equation for Hydrogen Atom	326

7.2.1	Solving The F Part of Wavefunction [i.e., Solving (7.16)]	335
7.2.2	Solving The Q Part of Wavefunction [i.e., Solving (7.17)]	336
7.2.3	Solving The Radial Part, R, of Wavefunction [i.e., Equation (7.18)]	343
7.3	Quantum Numbers	365
7.3.1	Significance of Quantum Numbers	365
7.3.2	Importance of Quantum Numbers in Explaining Hydrogen Spectrum	368
7.4	Degenerate and Non-degenerate Orbitals	369
7.5	Degeneracy of Energy Levels	370
7.6	Wavefunction of The Hydrogen Atom	374
7.6.1	Radial Wavefunction and Radial Plots	375
7.6.2	Angular Wavefunction and Shape of Orbitals	391
7.6.3	Contour Diagram or Contour Maps	409
7.6.4	Total Wavefunction of Hydrogen Atom	415
7.7	Calculation of Properties of Hydrogen Atom	418
7.7.1	Probability Density (ψ^2)	418
7.7.2	Most Probable Distance (r) or Position of Maximum Probability Using Radial Probability Density Function	418
7.7.3	Average Value of Position or Expectation Value of Position or Mean Radius $\langle r \rangle$	423
7.7.4	Expectation Value of Energy	429
7.8	Magnetic Properties: Angular Momentum and Magnetic Moment	432
7.8.1	Classical Expression of Magnetic Moment due to Orbital Motion of Electron	432
7.8.2	Quantum Mechanical Expression of Magnetic Moment Due to Orbital Motion of Electron	433
7.8.3	Potential Energy Due to Orbital Motion of An Electron in a Magnetic Field: Larmor Precession	435
7.8.4	Zeeman Effect	438
7.8.5	Anomalous Zeeman Effect	439
7.8.6	Explanation of Anomalous Zeeman Effect: Spin Quantum Number	439
7.8.7	Magnetic Moment Due to Spinning Motion of Electron	440
7.8.8	Potential Energy Due to Spinning Motion of Electron in a Magnetic Field	441
7.8.9	Experimental Demonstration of Electron Spin: Stern-Gerlach Experiment	443
7.9	Spin-Orbit Coupling and Term Symbols	448

8. Electronic Spectroscopy	468-491
8.1 Introduction	468
8.2 The Born-Oppenheimer Approximation for Electronic Spectra	469
8.3 Frank Condon Principle	470
8.4 Application of Electronic Spectroscopy to Organic Molecules	474
8.4.1 Types of Molecular Orbitals	474
8.4.2 Electronic Transitions in The Molecular Orbitals	475
8.4.3 Allowed and Forbidden Electronic Transitions	477
8.4.4 Chromophones and Auxochromes	478
8.4.5 Changes in Position and Intensity of Absorption	478
8.5 Electronic Excited State: Singlet and Triplet	480
8.6 Transition Dipole Moment	481
8.7 Selection Rules	482
8.8 Vibronic Coupling	486
8.9 Consequences of Light Absorption: The Jablonski Diagram	486
8.9.1 Non-Radiative Transition: Internal Conversion and Intersystem Crossing	487
8.9.2 Radiative Transitions: Fluorescence and Phosphorescence	489
9. Multielectron System and Approximate Methods	492-518
9.1 Introduction	492
9.2 Perturbation Method	493
9.2.1 Solution of Perturbation Method	494
9.2.2 Application of Perturbation Method on Helium Atom	499
9.3 Variation Method	502
9.3.1 Solution of Variation Method	503
9.3.2 Application of Variation Method on Helium Atom	504
9.3.3 Application of Variation Method for Various Other Systems	506
9.4 Self-Consistent Field Method	517
10. Chemical Bonding	519-601
10.1 Introduction	519
10.2 Born-Oppenheimer Approximation	520
10.3 Approximate Methods to Solve Schrödinger	523
10.3.1 Valence Bond (VB) Approach	524
10.3.2 Molecular Orbital (MO) Approach	526
10.4 Approximation of Linear Combination of Atomic Orbitals: LCAO–MO Treatment	536
10.5 LCAO–MO Treatment of Hydrogen Molecule Ion (H_2^+)	541
10.6 Hydrogen Molecule: Qualitative Treatment	550

10.6.1	Pauli's Exclusion Principle w.r.t. Hydrogen Molecule	556
10.6.2	Hund's Rule of Maximum Multiplicity w.r.t. Hydrogen Molecule	558
10.6.3	Aufbau's Principle w.r.t. Hydrogen Molecule	559
10.7	LCAO-MO Treatment of Hydrogen Molecule	560
10.7.1	Configuration Interaction	565
10.8	Valence Bond Treatment (VBT) of Hydrogen Molecule	567
10.9	Comparison of VBT and MOT	576
10.10	LCAO-MO Treatment of Homonuclear Diatomic Molecules	577
10.11	LCAO-MO Treatment of Heteronuclear Diatomic Molecules	584
10.12	LCAO-MO Treatment of Triatomic Molecules	592
	Index	602-608
