Chapter 1	The Sustainability Connection	1
	<i>C. Middlecamp and M. M. Kirchhoff</i>	
1.1	Opening Thoughts	1
1.1.1	Consider the Needs of the Students Currently in Our Chemistry Classrooms	2
1.1.2	Consider the Needs of Communities	2
1.1.3	Consider the Needs of All Life on Our Planet	3
1.2	Background	6
1.2.1	Green Chemistry	7
1.2.2	Sustainable Chemistry	9
1.2.3	Systems Thinking	11
1.2.4	Circular Economy and Circular Chemistry	11
1.2.5	Artificial Intelligence (AI)	13
1.2.6	Tying it All Together	16
1.3	Teaching & Learning a Sustainability Topic	17
1.3.1	A Basic Understanding of the Carbon Cycle	17
1.3.2	Connections with Chemistry and the Chemistry Curriculum	19
1.3.3	Student Learning Outcomes	20
1.3.4	Activities, Pedagogies, and Real-world Examples	22
1.4	Closing Thoughts	24
	References	25

Advances in Chemistry Education Series No. 13

Chemistry Education for a Sustainable Future

Edited by Catherine H. Middlecamp, Mary M. Kirchhoff, Peter Mahaffy and Klaus Kümmerer

© The Royal Society of Chemistry 2025

Published by the Royal Society of Chemistry, www.rsc.org

Chapter 2	The Chemical Basis of Sustainability	28
	<i>S. Delaney and S. A. Matlin</i>	
2.1	Opening Thoughts	29
2.2	Background	29
2.2.1	Accelerating Changes to Planet Earth	29
2.2.2	Planet Earth as a Closed System (Mass)	30
2.2.3	Planet Earth as an Open System (Energy)	33
2.2.4	The Terawatt Challenge: Getting the Right Kind of Energy in the Right Place	33
2.2.5	The Biomass Factor	36
2.3	Teaching & Learning a Sustainability Topic	39
2.3.1	Earth's Material Resources (Example #1)	39
2.3.2	Material Circularity and Stewardship (Example #2)	48
2.4	Closing Thoughts – A Sustainability Framework for Chemistry	57
	References	59
Chapter 3	Orienting Chemistry Towards Sustainability	66
	<i>K. Kümmerer</i>	
3.1	Opening Thoughts	67
3.2	Background	67
3.2.1	Chemical Waste	68
3.2.2	Chemical Accidents	68
3.2.3	Environmental and Health Problems and the Rise of Environmental Chemistry	69
3.2.4	Pollution Prevention in Industry	71
3.2.5	Chemistry's Contribution to a More Circular Economy	71
3.2.6	Chemistry Within/For Sustainability	74
3.2.7	Interrelationships	76
3.3	Teaching & Learning a Sustainability Topic	78
3.3.1	A Basic Understanding of PFAS	78
3.3.2	PFAS Connections with the Chemistry Curriculum	83
3.3.3	Activities, Pedagogies, and Real-world Examples	87
3.4	Closing Thoughts	89
	Acknowledgements	89
	References	89

Chapter 4 Sustainability Tools I – Systems Thinking	93
<i>M. Orgill, S. Donnelly and S. Delaney</i>	
4.1 Opening Thoughts	94
4.2 Background	94
4.2.1 Benefits and Challenges of Systems Thinking	95
4.2.2 Essential Characteristics of Systems Thinking	96
4.3 Teaching & Learning a Sustainability Topic – Ocean Acidification	99
4.3.1 An Overview of Ocean Acidification	99
4.3.2 Connections between Ocean Acidification and Foundational Chemistry Curricula	102
4.3.3 Using the ChEMIST Table to Iteratively Make Existing Lessons or Units More Systems Thinking Oriented	103
4.4 Teaching & Learning a Sustainability Topic – Lithium-ion Batteries	106
4.4.1 A Basic Understanding of Lithium-ion Batteries	108
4.4.2 A Basic Understanding of Lithium Sources, Lithium Processing, and Lithium Refining	110
4.4.3 A Basic Understanding of Lithium Recycling	112
4.4.4 Connections between Lithium-ion Battery Chemistry and Chemistry Curricula	113
4.4.5 Using Visualization to Represent Relationships Within and Across Systems and Identify Emergent Properties of a System	114
4.5 Closing Thoughts	128
Online Resources	129
References	130
Chapter 5 Sustainability Tools II – Impact-based Metrics	135
<i>A. Bongers and P. G. Jessop</i>	
5.1 Opening Thoughts	136
5.2 Background	136
5.2.1 What is Wrong with Mass-based Metrics?	136
5.2.2 An Introduction to Impact-based Metrics	138
5.2.3 Life Cycle Assessment	140

5.3	Teaching & Learning Impact-based Metrics	143
5.3.1	Student Learning Outcomes	144
5.3.2	First-year Chemistry and the First-year Undergraduate Curricula	145
5.3.3	Introductory Organic Chemistry: organicallychem.com	145
5.3.4	Upper-level or Specialized Undergraduate Curriculum	147
5.3.5	Activities and Practical Examples for Impact-based Metrics	147
5.4	Closing Thoughts	153
	References	155
Chapter 6	Sustainability Frameworks I – Planetary Boundaries	157
	<i>P. G. Mahaffy and S. E. Cornell</i>	
6.1	Opening Thoughts: Tracking Global Environmental Unsustainability Using the Planetary Boundaries Framework	158
6.1.1	Unsustainability is a Global Systems Challenge	158
6.1.2	The Planetary Boundaries Framework Shows How People are Changing the Planet	158
6.2	Background: Education for Global Environmental Sustainability	160
6.2.1	Structuring Chemistry Education for Sustainability Using the Planetary Boundaries Framework	163
6.3	Teaching and Learning Chemistry for Sustainable Earth and Societal Systems	165
6.3.1	Using the Planetary Boundaries Framework to Connect Chemistry and Sustainability	165
6.3.2	Teaching Chemistry and Climate Science with the Planetary Boundaries Framework	169
6.3.3	Activities and Resources to Connect Chemistry Concepts to Climate Change Through the Planetary Boundaries Framework	170
6.4	Closing Thoughts	181
	Acknowledgements	181
	References	182

Chapter 7 Sustainability Frameworks II – UN Sustainable Development Goals	184
<i>J. Wissinger</i>	
7.1 Opening Thoughts	185
7.1.1 Placing Chemistry in the Context of Sustainable Development	186
7.1.2 How Do the SDGs Help Prepare Students for Careers?	187
7.1.3 Education is Key to Achieving the Sustainable Development Goals	191
7.2 Background	192
7.2.1 Chemistry and the SDGs	192
7.2.2 Scaffolding the SDGs Across the Curriculum	192
7.2.3 Connecting Green Chemistry Principles, Systems Thinking, and the UN SDGs	194
7.2.4 Chemistry Societies and Web-based Resources	196
7.3 Teaching & Learning the UN Sustainable Development Goals	197
7.3.1 Polymers, Plastics, and the UN SDGs	197
7.3.2 Polymer Basics	197
7.3.3 Activity Set #1. The Benefits and Problems with Using Plastics	199
7.3.4 Activity Set #2. Designing More Sustainable Plastics for Meeting the SDGs	201
7.3.5 Activity Set #3. Single-use Packaging and the UN SDGs	203
7.4 Concluding Thoughts	209
References	211
Chapter 8 Sustainability, Ethics, and Students	215
<i>M. A. Fisher</i>	
8.1 Opening Thoughts	216
8.2 Background	217
8.2.1 Professional Ethics	217
8.2.2 Ways to Bring Professional Ethics into the Chemistry Curriculum	219
8.2.3 Resources for Connecting Chemistry to Ethics	223
8.3 Teaching and Learning a Chemistry Topic with an Explicit Ethical Dimension	224
8.3.1 Student Learning Outcomes	224

8.3.2	General Chemistry – Refrigerants, Lewis Structures, and Shapes of Molecules	225
8.3.3	Biochemistry – HIV/AIDS, HIV Protease, and Enzyme Catalysis	228
8.3.4	Assessment	229
8.4	Closing Thoughts	232
	References	232
Chapter 9	Student Agency in Sustainability	235
	<i>S. Rap, A. Sindiani-Bsoul, R. Mamlok-Naaman and R. Blonder</i>	
9.1	Opening Thoughts	236
9.2	Background	236
9.2.1	Education for Sustainable Development	236
9.2.2	Agency	237
9.2.3	A Framework for Student Agency in Sustainability	238
9.3	Two Case Studies	239
9.3.1	Methodology	239
9.3.2	Case Study #1: A Campus Sustainability Map	239
9.3.3	Case Study #2: “Speak to Me in Numbers”	243
9.3.4	Discussion	246
9.4	Closing Thoughts	248
	References	249
Chapter 10	Imagining Chemistry Education in 2050	251
	<i>M. Reynders and T. Holme</i>	
10.1	Envisioning the Future: Learning and Teaching in 25 Years	252
10.1.1	Questions About Learning	252
10.1.2	Questions About Teaching	254
10.2	Navigating Complexity: Visualizing the Teaching of Sustainability in Chemistry	256
10.2.1	Possible Subsystems	257
10.2.2	The Bigger Picture	261
10.3	The Role of Artificial Intelligence	264
10.4	The Role of Convergence	266
10.5	Influencing an Unpredictable Future	267
	References	269
