Preface xv

About the Companion Website xvii

1	Biological Diversity: A Geobiological Perspective	1
	<i>Zisheng Guo and Xingliang Zhang</i>	
1.1	Introduction	1
1.2	Classification of Biological Entities	2
1.2.1	Acellular Life	2
1.2.2	Domains of Cellular Life	4
1.2.2.1	The LUCA	5
1.2.2.2	The FECA and LECA	7
1.2.3	Kingdoms of Cellular Life	8
1.3	Diversity of Biological Metabolism	9
1.3.1	Metabolic Classification of Organisms	10
1.3.2	Photosynthesis	11
1.3.2.1	Pigments, Reactions, and Photosystems	11
1.3.2.2	Oxygenic Photosynthesis	11
1.3.2.3	Anoxygenic Photosynthesis	13
1.3.3	Nitrogen Fixation	15
1.3.4	Chemolithotrophy: Energy from Oxidation of Inorganics	16
1.3.4.1	Hydrogen-Oxidation: Using the Chemical Energy in H_2 to Fix Carbon	17
1.3.4.2	Methanogenesis and Acetogenesis from CO_2 Reduction	17
1.3.4.3	Oxidation of Reduced Sulfur Compounds	19
1.3.4.4	Iron Oxidation	21
1.3.4.5	Manganese Oxidation	22
1.3.4.6	Ammonia and Nitrite Oxidation: Nitrification	23
1.3.4.7	Anammox	25
1.3.5	Catabolism	26
1.3.5.1	Glycolysis and Fermentation	26
1.3.5.2	Aerobic Respiration	27
1.3.5.3	Nitrate Reduction and Denitrification	28
1.3.5.4	Microbial Manganese Reduction	29
1.3.5.5	Ferric Iron Reduction	30
1.3.5.6	Sulfate Reduction	32
1.3.5.7	Other Electron Acceptors	35
1.3.5.8	Methanogenesis	35

1.3.5.9	Methanotrophs and Methylotrophs	38
	References	39

2 Life in Extreme Environments 43

Zisheng Guo and Xingliang Zhang

2.1	Introduction	43
2.2	Diversity of Extreme Environments and Extremophiles	44
2.2.1	Extreme Environments	44
2.2.1.1	Extreme Ecosystems	44
2.2.1.2	Extreme Environmental Parameters	46
2.2.2	Phylogenetic Diversity of Extremophiles	46
2.2.2.1	Extremophilic Prokaryotes	46
2.2.2.2	Extremophilic Eukaryotes	54
2.2.2.3	Extremophilic Viruses	55
2.3	Thermophiles	57
2.3.1	Phylogenetic Diversity	57
2.3.2	Adaptive Strategies	58
2.4	Psychrophiles	59
2.4.1	Phylogenetic Diversity	59
2.4.2	Adaptive Strategies	60
2.5	Acidophiles	62
2.5.1	Phylogenetic Diversity	62
2.5.2	Adaptive Strategies	63
2.6	Alkaliphiles	63
2.6.1	Phylogenetic Diversity	63
2.6.2	Adaptive Strategies	64
2.7	Halophiles	65
2.7.1	Phylogenetic Diversity	66
2.7.1.1	Halophilic Archaea	66
2.7.1.2	Halophilic Bacteria	66
2.7.1.3	Halophilic Eukaryotes	66
2.7.2	Adaptive Strategies	67
2.7.2.1	Salt-in and -out Strategies	67
2.7.2.2	Other Strategies	68
2.8	Xerophiles	68
2.8.1	Low Water Activity Stress	68
2.8.2	Low Water Activity Habitats	69
2.8.3	Adaptive Strategies	69
2.9	Radiodurans	70
2.9.1	Discovery	70
2.9.2	Radiotolerant Organisms	70
2.9.3	Radiotolerant Mechanisms	71
2.10	Barophiles	72
2.10.1	Phylogenetic Diversity	72
2.10.1.1	Barophilic Prokaryotes	72
2.10.1.2	Barophilic Eukaryotes	73
2.10.2	Adaptive Strategies	73

2.11	Tardigrades as a Model Animal for Astrobiology	74
2.11.1	Survival Strategies	74
2.11.2	Adaptations to Anhydrobiosis	76
2.11.3	Adaptations to Cryobiosis	77
2.11.4	Molecular Mechanisms of Radiation and ROS Tolerance	77
2.11.4.1	ROS Scavenging Mechanisms	78
2.11.4.2	DNA Repair Mechanisms	78
2.11.5	Tardigrades in Space	78
	References	79
3	Microbial Ecosystems	87
	<i>Wei Liu and Xingliang Zhang</i>	
3.1	Introduction	87
3.1.1	From Cell to Microbial Communities	87
3.1.2	Extracellular Polymeric Substances (EPS)	88
3.1.3	Preservation Potential	90
3.2	Biofilms and Microbial Mats	91
3.2.1	Biofilms	91
3.2.1.1	What Are Biofilms?	91
3.2.1.2	Why Learn About Biofilms?	92
3.2.1.3	Types of Biofilms	94
3.2.1.4	Development of Biofilms	94
3.2.1.5	Factors that Affect Biofilm Attachment and Growth	97
3.2.1.6	Fully Functioning Biofilm: Cooperate, Grow, and Spread	97
3.2.1.7	Biofilm Architecture	98
3.2.1.8	Biochemistry of Biofilm Bacteria	99
3.2.2	Microbial Mats	100
3.2.2.1	Structure of Microbial Mats	102
3.2.2.2	Morphology and Physical Behaviors	104
3.2.2.3	Microenvironment Within the Microbial Mats	104
3.2.2.4	Biogeochemistry of Microbial Mats	106
3.3	Microbial Ecosystems on Earth	107
3.3.1	Microbial Ecosystems in Marine Settings	107
3.3.1.1	Basaltic Ocean Crust Ecosystems	107
3.3.1.2	Hydrothermal Vent Ecosystems	109
3.3.1.3	Cold Seep Ecosystems	113
3.3.2	Microbial Ecosystems in Terrestrial Settings	114
3.3.2.1	Glacier and Frozen Soil Systems	114
3.3.2.2	Desert System	116
3.3.2.3	Soil System	119
3.3.2.4	Karst Cave System	121
3.3.3	Microbial Ecosystems in Other Extreme Settings	123
3.3.3.1	Extremely Acidic System	123
3.3.3.2	High Saline-alkaline System	125
3.3.3.3	Deep Subsurface System	126
3.4	Microbial Ecosystem as a Model for Exploring Life Beyond	129
	References	129

4	Earth as a System and Biogeochemical Cycles	135
	<i>Weiduo Hao and Xingliang Zhang</i>	
4.1	Introduction	135
4.2	Earth System: An Overview	135
4.2.1	A System Approach	135
4.2.2	Energy Flows of the Earth System	136
4.2.2.1	Law of Thermodynamics	136
4.2.2.2	Earth's Energy Budget	136
4.2.2.3	Human Use of Energy Flows	137
4.2.3	Three Key Traits of the Earth System	138
4.2.3.1	Openness	138
4.2.3.2	Integration	139
4.2.3.3	Complexity	139
4.3	Biogeochemical Cycles	139
4.3.1	Concept	139
4.3.1.1	Biomass Production	139
4.3.1.2	Energy Source	140
4.3.1.3	Terminal Electron Acceptors	140
4.3.2	Element Abundance	140
4.3.3	Carbon Cycle	141
4.3.3.1	Carbon Reservoirs	141
4.3.3.2	Flux: Withdrawal	142
4.3.3.3	Flux: Addition	143
4.3.3.4	Isotope Fractionation	144
4.3.4	Oxygen Cycle	146
4.3.4.1	O ₂ Reservoirs	147
4.3.4.2	O ₂ Flux: Production	148
4.3.4.3	O ₂ Flux: Consumption	149
4.3.5	Nitrogen Cycle	151
4.3.5.1	Reservoirs	152
4.3.5.2	Flux	152
4.3.5.3	Key Processes	152
4.3.5.4	Isotope Fractionation	154
4.3.6	Sulfur Cycle	154
4.3.6.1	Reservoirs	155
4.3.6.2	Flux	156
4.3.6.3	Key Processes	157
4.3.6.4	Organic Sulfur Compounds	158
4.3.6.5	Isotope Fractionation	159
4.3.7	Phosphorus Cycle	162
4.3.7.1	Reservoirs	162
4.3.7.2	Flux	162
4.3.7.3	Bioavailability in Ecosystems	164
4.3.7.4	P Supply and Sink	164
4.3.7.5	Tectonic Controls on Global Phosphorus Cycle	166
4.3.7.6	Human Impact on Global Phosphorus Cycle	166
4.3.8	Iron Cycle	167

4.3.8.1	Flux	168
4.3.8.2	Key Processes	169
4.4	Major Features of Biogeochemical Cycles	170
4.4.1	Diversity of Pathways	171
4.4.2	Variable Rates of Cycling	171
4.4.3	The Effects of Human Activity	172
	References	173

5 Biomineralization and Its Origin 177

Luoyang Li and Xingliang Zhang

5.1	Introduction	177
5.2	Biominerals and Organominerals	179
5.2.1	Concept and Unique Characteristics	179
5.2.2	Major Groups of Biominerals	181
5.2.2.1	Carbonate Biominerals	182
5.2.2.2	Phosphate Biominerals	184
5.2.2.3	Silica Biominerals	185
5.2.2.4	Sulfate Biominerals	186
5.2.2.5	Sulfide Biominerals	186
5.2.2.6	Oxide and Hydroxide Biominerals	187
5.2.2.7	Organominerals	189
5.3	Classification of Biomineralization	189
5.3.1	Biologically Influenced Mineralization (BFM)	190
5.3.2	Biologically Induced Mineralization (BIM)	191
5.3.3	Biologically Controlled Mineralization (BCM)	192
5.3.3.1	Weakly vs. Strictly Biological-Controlled Mineralization	192
5.3.3.2	Biologically Controlled Extracellular Mineralization	193
5.3.3.3	Biologically Controlled Intercellular Mineralization	193
5.3.3.4	Biologically Controlled Intracellular Mineralization	194
5.4	Principle of Biomineralization	195
5.4.1	Supersaturation and Nucleation	195
5.4.2	Amorphous Phase and Solidification	196
5.4.3	Hierarchical Organization	198
5.4.4	Genetic and Molecular Systems	199
5.4.5	Benefits and Costs	199
5.4.6	Prokaryotic vs. Eukaryotic Biomineralization	200
5.5	Origin and Evolution of Biomineralization	201
5.5.1	History of Biomineralization Pathways	201
5.5.2	On the Origin of Animal Skeletons	202
5.5.3	Controls on the Onset of Biomineralization	204
5.5.3.1	Co-option of Ancestral Biomineralization Toolkit	204
5.5.3.2	Oxygen and Marine Redox	205
5.5.3.3	Biomineralization as a Detoxification Mechanism	205
5.5.3.4	Mineralogical Stability and Changing Seawater Chemistry	206
5.5.3.5	The Rise of Biological Arm-Race	208
5.5.4	Cambrian Animal Skeletonization: Insights from Molluscs	208
5.5.4.1	Genetic Co-option Underpinning Shell Diversity	209

5.5.4.2	Fossils and Oldest Molluscan Shells	209
5.5.4.3	Mineralogy and Seawater Chemistry	210
5.5.4.4	Microbial Attacks and Defensive Strategy	212
5.6	Releasing Biomineralization Signatures from Fossils	214
5.6.1	Diagenesis, Permineralization, and Phosphatization	215
5.6.2	Recognizing Primary Biomineral Structures	215
5.6.2.1	Identification of the Original Mineralogy	215
5.6.2.2	Preservation of Skeletal Organic Matrix	217
5.6.2.3	Primary Structures and Diagenetic Growths	217
5.6.3	Biomineralization in Phylogenetic Systematics	218
5.6.4	Skeletal Sediments and Paleoenvironmental Reconstruction	219
	References	220

6 Biosedimentation 227

Wei Liu and Xingliang Zhang

6.1	Introduction	227
6.2	Biogenic Sediments	228
6.2.1	Carbonates	229
6.2.1.1	Limestones are Biological Sediments	230
6.2.1.2	Microbialites	235
6.2.1.3	Methane-Seep Carbonates	238
6.2.1.4	“Dolomite Problem” and Microbial Dolomite Models	241
6.2.2	Siliceous Sediments	243
6.2.2.1	Primary Sediments	243
6.2.2.2	Formation of Chert	245
6.2.3	Phosphatic Sediments	247
6.2.3.1	Phosphorus Source	248
6.2.3.2	Phosphorus Uptake	248
6.2.3.3	Phosphorus Concentration	249
6.2.3.4	Apatite Precipitation	249
6.2.3.5	Microbial Structures in Phosphatic Rocks	249
6.2.3.6	Grains and Groundmasses	251
6.2.4	Iron Sediments	251
6.2.4.1	Sedimentary Pyrite	252
6.2.4.2	Banded Iron Formations	253
6.3	Biological Diagenesis	257
6.3.1	Biogeochemical Zonation of Sediment Column	258
6.3.2	Diagenetic Mineralization	261
6.3.2.1	Diagenetic Carbonate Minerals	261
6.3.2.2	Diagenetic Phosphate Minerals	262
6.3.2.3	Amorphous Silica	262
6.4	Microbially Induced Sedimentary Structures	262
6.4.1	Definition	262
6.4.2	Classification	263
6.4.3	Biological Processes in MISS Formation	263
6.4.3.1	Growth	263
6.4.3.2	Biostabilization	268

6.4.3.3	Baffling and Trapping	269
6.4.3.4	Binding	269
6.4.3.5	Interference of Microbial Activities Interacting with Physical Environments	269
6.4.4	Distribution and Preservation	270
6.4.4.1	Temporal and Spatial Distribution	270
6.4.4.2	Preservation and Recognition	271
6.5	Astrobiological Implications	272
	References	273

7 Bioerosion and Biological Weathering 279

Ruliang He and Xingliang Zhang

7.1	Introduction	279
7.2	Bioerosion	280
7.2.1	Macroborers	282
7.2.1.1	Macroboring Groups	282
7.2.1.2	Insight into Boring Sponges	285
7.2.1.3	Insight into Boring Bivalves	287
7.2.2	External Grazers and Scrapers (Raspers)	289
7.2.3	Microborers	292
7.2.3.1	Microbial Endolithic Groups	292
7.2.3.2	Diverse Endolithic Habitats	292
7.2.3.3	Geological Evolution of Microborings	293
7.2.3.4	Geological and Astrobiological Implications	294
7.3	Biological Weathering	295
7.3.1	Biological Mechanisms That Enhance Rock Weathering	295
7.3.1.1	Plant Roots	295
7.3.1.2	Animals	295
7.3.1.3	Microbial Communities	296
7.3.2	Biological Weathering of Silicate Minerals and Rocks	297
7.3.2.1	Feldspar	298
7.3.2.2	Silica	299
7.3.2.3	Mafic Rocks and Minerals	299
7.3.3	Carbonate Weathering	300
7.3.4	Sulfide Mineral Oxidation	301
7.3.5	Insight into Lichen Weathering	302
7.3.5.1	Physical Processes	303
7.3.5.2	Biochemical Processes	303
7.3.5.3	A Zone Model	303
7.4	Soil as a Classic System of Biological Weathering	304
7.4.1	Soil Development	305
7.4.2	Horizons of Soil Profile	306
7.4.3	Humus in Soils	307
	References	307

8 Co-evolution of Life and Environment 311

Xingliang Zhang

8.1	Introduction	311
-----	--------------	-----

8.2	Earth's Earliest Records and Habitability	313
8.2.1	Hadean (~4.567 to 4.031 Ga)	313
8.2.1.1	Hadean Zircons and Implications	313
8.2.1.2	Hadean Environment	314
8.2.2	Archean (~4.031 to 2.5 Ga)	315
8.2.2.1	Geological Record of Eoarchean (~4.031–3.6 Ga)	316
8.2.2.2	Geological Record of Paleoarchean (3.6–3.2 Ga)	318
8.2.2.3	Geological Record of Mesoarchean (3.2–2.8 Ga)	320
8.2.2.4	Geological Record of Neoproterozoic (2.8–2.5 Ga)	321
8.2.2.5	Archean Environment—Habitability for Prokaryotes	322
8.3	Evolution of Atmosphere	323
8.3.1	The Prebiotic Atmosphere	324
8.3.2	The Atmosphere at the Time of Life Origin	325
8.3.3	Atmospheric Greenhouse Gases and Long-term Climate Change	325
8.3.3.1	The Faint Young Sun Paradox	326
8.3.3.2	Atmospheric CO ₂ Concentrations in the Precambrian	327
8.3.3.3	Methane-rich Atmosphere in the Precambrian	329
8.3.3.4	Phanerozoic CO ₂ Concentrations	330
8.3.4	The Rise of Atmospheric O ₂	332
8.3.4.1	Net Accumulation of O ₂ in Atmosphere	333
8.3.4.2	Constraints on Precambrian Atmospheric O ₂ Levels	333
8.3.4.3	Evidence for the Paleoproterozoic Rise of Atmospheric O ₂	335
8.3.4.4	Second Rise of Atmospheric O ₂	337
8.3.4.5	Phanerozoic Variations of Atmospheric O ₂	337
8.4	Evolution of the Ocean	339
8.4.1	Origin of the Oceans	340
8.4.2	Cooling of the Surface Ocean Temperature	340
8.4.3	Salinity History of Ocean	342
8.4.3.1	Total Salinity	343
8.4.3.2	Secular Variations of SO ₄ ²⁻ , Ca ²⁺ , and Mg ²⁺ Concentrations	345
8.4.3.3	Bioavailability of Phosphorus and Nitrogen	349
8.4.3.4	Bio-essential Trace Metals	350
8.4.4	Evolution of Ocean Oxygenation	351
8.5	Evolution of Biosphere	353
8.5.1	The Origin of Life	353
8.5.2	The Timing of Life Origin	355
8.5.3	The Framework of Life History	357
8.5.3.1	Prokaryotes Dominated the Biosphere for 2.0 Billion Years	357
8.5.3.2	Eukaryotic Life Emerged Early and Diverged Late	358
8.5.3.3	Multicellularity Across Lineages of the Life Tree	360
8.5.3.4	The Cambrian Explosion of Animals	361
8.5.3.5	The Development of Life on Land	362
8.5.3.6	Phanerozoic Events	364
8.5.4	Evolution of Metabolism	367
8.6	A Summary: Four Billion Years Co-evolution to One Intelligent Species	369
