

CONTENTS

Prologue	xv
1: Introduction	
1.1 What are Complex Systems?	3
1.2 Emergentism	6
1.3 The Field of Psychology	8
1.4 The Art of Simplification	11
1.5 A Limited Number of Equilibria	14
1.6 Networks are Everywhere	15
1.7 Methods for Investigating Complex Systems	16
1.8 Other Work and Sources	17
1.9 Exercises	18
2: Chaos and Unpredictability	
2.1 Introduction	21
2.2 The Population Growth of Rabbits	21
2.3 Stable and Unstable Fixed Points	23
2.4 Limit Cycles	26
2.5 Chaos	27
2.6 Phase Plot and Bifurcation Diagrams	28
2.7 What Did We Learn?	31
2.8 Other Maps and Fractals	32
2.9 Detecting Chaos in Psychophysiological Data	33
2.10 Exercises	34
3: Transitions in Complex Systems	
3.1 Introduction	37
3.2 Examples of Transitions	38
3.3 Bifurcation and Catastrophe Theory	39
3.3.1 <i>The Quadratic Case</i>	41

3.3.2	<i>The Fold Catastrophe</i>	42
3.3.3	<i>The Cusp Catastrophe</i>	44
3.3.4	<i>Examples of Cusp Models</i>	48
3.3.5	<i>Higher-Order Catastrophes</i>	52
3.3.6	<i>Other Bifurcations</i>	52
3.4	Building Catastrophe Models	53
3.4.1	<i>Mechanistic Models</i>	53
3.4.2	<i>Phenomenological Models</i>	55
3.5	Testing Catastrophe Models	57
3.5.1	<i>The Catastrophe Flags</i>	57
3.5.1.1	<i>Sudden Jump</i>	58
3.5.1.2	<i>Multimodality</i>	59
3.5.1.3	<i>Inaccessibility</i>	61
3.5.1.4	<i>Divergence</i>	61
3.5.1.5	<i>Hysteresis</i>	62
3.5.1.6	<i>Anomalous Variance, Divergence of Linear Response, and Critical Slowing Down</i>	63
3.5.2	<i>Fitting the Cusp to Cross-Sectional Data</i>	64
3.5.2.1	<i>Cobb's Maximum Likelihood Approach</i>	64
3.5.2.2	<i>Empirical Examples</i>	69
3.5.2.3	<i>Evaluation</i>	71
3.6	Criticism of Catastrophe Theory	72
3.7	Conclusion	74
3.8	Exercises	74
4:	Building Dynamic System Models	
4.1	Introduction	77
4.2	Basic Concepts	78
4.2.1	<i>Back to the Logistic Equation</i>	78
4.2.2	<i>The Lotka–Volterra Models</i>	81
4.2.3	<i>Fitting Models: Stochasticity versus Noise</i>	83
4.2.4	<i>Back to the Cusp</i>	85
4.2.5	<i>Bifurcation Analysis</i>	86
4.2.6	<i>Spruce Budworm Outbreak Model</i>	88
4.2.7	<i>Evaluation of Ecological Modeling</i>	90
4.3	Psychological Models	92
4.3.1	<i>Response Time Models</i>	92

4.3.2 Dyadic Models.	95
4.3.2.1 Romeo and Juliet	95
4.3.2.2 The Mathematics of Marriage	98
4.3.3 The van Geert Models.	101
4.3.4 The Pólya Urn Model of the Third Source.	102
4.3.5 The Panic Model	105
4.3.6 Neural Models: Van der Pol and Different Time Scales	106
4.3.7 Analogical Modeling: Budworms and Beers	109
4.3.8 Cascading Transitions in Multifigure Multistable Perception	112
4.3.8.1 Interacting Cusps	112
4.3.8.2 Application to Perception	116
4.4 Causal-Loop Diagrams	118
4.5 Closing Remarks	120
4.6 Exercises	121

5: Self-Organization

5.1 Introduction	125
5.2 Key Examples from the Natural Sciences	126
5.2.1 Physics	126
5.2.2 Chemistry	129
5.2.3 Biology	130
5.2.4 Computer Science	132
5.2.5 Neural Networks	135
5.2.6 The Concept of Self-Organization	138
5.3 NetLogo	139
5.3.1 Examples	139
5.3.1.1 The Ising Model	139
5.3.1.2 Hypercycles.	140
5.3.1.3 Flocking.	140
5.3.1.4 Traffic.	140
5.3.1.4 Neural Networks.	140
5.3.1.5 The Sandpile Model.	141
5.3.1.6 Other Models	142
5.3.2 A Bit of NetLogo Programming	142
5.3.2.1 Game of Life	142
5.3.2.1 The Ising model	144

5.4 Self-Organization in Psychology and Social Systems.....	144
5.4.1 <i>The Brain</i>	144
5.4.2 <i>Consciousness</i>	146
5.4.3 <i>Visual Illusions</i>	147
5.4.4 <i>Motor Action</i>	149
5.4.5 <i>Robotics</i>	151
5.4.6 <i>Developmental Processes</i>	151
5.4.7 <i>Psychological Disorders</i>	154
5.4.8 <i>Social Relations</i>	154
5.4.9 <i>Collective Intelligence</i>	156
5.4.10 <i>Game Theory</i>	156
5.4.11 <i>Self-Organization in Organizations</i>	157
5.5 Zooming Out.....	158
5.6 Exercises.....	160

6: Psychological Network Models

6.1 Introduction	163
6.2 Network Theory.....	163
6.2.1 <i>Network Concepts</i>	164
6.2.2 <i>Network Types</i>	166
6.2.3 <i>Network Dynamics</i>	168
6.3 Psychological Network Models	170
6.3.1 <i>Mutualism Model: The Case of General Intelligence</i>	171
6.3.1.1 <i>The g Factor</i>	171
6.3.1.2 <i>Mutualism Model</i>	173
6.3.1.3 <i>Abnormal Development</i>	175
6.3.1.4 <i>The Wiring of Intelligence</i>	177
6.3.2 <i>Symptom Networks</i>	178
6.3.3 <i>Ising Attitude Model</i>	181
6.3.3.1 <i>Model Setup</i>	184
6.3.3.2 <i>Simulation</i>	186
6.3.3.3 <i>Learning</i>	188
6.3.3.4 <i>The Stability of Attitudes and Entropy Measures</i>	190
6.3.3.5 <i>Tricriticality</i>	190
6.4 Psychometric Network Techniques.....	191
6.4.1 <i>Main Techniques</i>	192
6.4.2 <i>Fitting the Mutualism Model</i>	193

6.4.3 <i>Fitting Ising Models</i>	196
6.5 Challenges	198
6.5.1 <i>Psychological Network Modeling</i>	199
6.5.2 <i>Psychometric Network Analysis</i>	201
6.6 Conclusion	202
6.7 Exercises	203
7: Sociophysics	
7.1 Introduction	207
7.2 Some Famous Examples	208
7.2.1 <i>Segregation</i>	208
7.2.2 <i>The Evolution of Language: The Naming Game</i>	209
7.2.3 <i>Cultural Dynamics: The Axelrod Model</i>	212
7.3 Dynamics of Opinions	215
7.3.1 <i>Discrete-Opinion Models</i>	215
7.3.1.1 <i>Voter Models</i>	215
7.3.1.2 <i>More Discrete-Opinion Models: Majority Type Models</i>	216
7.3.1.3 <i>Social Impact Theory</i>	218
7.3.2 <i>Continuous Opinion Models</i>	220
7.3.2.1 <i>Classic Models</i>	220
7.3.2.2 <i>Bounded Confidence</i>	220
7.3.3 <i>Empirical Verification</i>	224
7.4 Psychosocial Models	225
7.4.1 <i>Networks of Attitude Networks</i>	225
7.4.1.1 <i>The HIOM</i>	226
7.4.1.2 <i>Agent Interactions: Information and Attention</i>	228
7.4.1.3 <i>Algorithm</i>	229
7.4.1.4 <i>The Persuasion Paradox</i>	231
7.4.1.5 <i>A Counterintuitive Prediction</i>	231
7.4.1.6 <i>Variants of the HIOM</i>	232
7.4.2 <i>Cascading Transitions in Other Psychosocial Systems</i>	235
7.5 Psychosociophysics	235
7.6 Exercises	236
Epilogue	239
Bibliography	251
