SECTION I Automotive Product Development Process

Chapter 1 Introduction: Automotive Product Development 3
 Introduction 3
 Complex Product, Many Inputs, Many Designers and Engineers 3
 Basic Definitions of Process, System, and Systems Engineering 3
 Process..... 3
 System 4
 Systems Engineering (SE) 4
 Systems Approach 5
 Multidisciplinary Approach..... 6
 Customer Focused 6
 Basic Characteristics of SE..... 6
 Product Development 8
 Processes and Phases in Product Development..... 9
 Automotive Product as a System 11
 Automotive Product Development Process 11
 What is Automotive Product Development? 11
 Flow Diagram of Automotive Product Development 14
 Timing Chart of Automotive Product Development 14
 Understanding Customer Needs..... 17
 Program Scope, Timings, and Challenges 17
 Scope of Vehicle Development Programs 17
 Program Timings..... 18
 Important Considerations in Managing Vehicle Programs..... 19
 Some Frequently Asked Questions during Vehicle Development....21
 Decision Making during Product Development..... 21
 Disciplines Involved in Automotive Product Development 22
 Selecting the Program Leader 22
 Role of Early Vehicle Concept Development 24
 Formation of Team Structure and Teams..... 24
 Treating Suppliers as Partners..... 26
 Other Internal and External Factors Affecting Vehicle Programs 26
 Internal Factors..... 26
 External Factors..... 27

Importance, Advantages, and Disadvantages of Systems Engineering	27
Importance of Systems Engineering	27
Advantages and Disadvantages of the Systems Engineering Process	28
Concluding Remarks	28
References	28
 Chapter 2 Steps and Iterations Involved in Automotive Product Development ...	31
Introduction	31
Systems Engineering Process and Models	32
The Process Begins with Understanding Customer and Business Needs and Government Requirements	32
Systems Engineering Process	33
Systems Engineering “V” Model	35
Left Side of the “V”: Design and Engineering	37
Right Side of the “V”: Verification, Manufacturing, and Assembly	38
Right Side of the Diagram: Operation and Disposal	38
Systems Engineering Model with Five Types of Loop	39
Management of the Systems Engineering Process	39
Defining and Locating Gateways in Vehicle Program Timings	41
Managing by Vehicle Attributes	42
Vehicle Attributes and Attribute Requirements	42
What Is an Attribute?	42
Attribute Requirements	46
Attribute Management	46
Importance of Attributes	47
Vehicle-Level Target Setting	47
Target Setting and Measures	47
Some Examples of Attribute-level Measures	48
Decomposition of a Vehicle into Manageable Lower-Level Entities	49
Managing a Complex Product	49
Decomposition Tree	50
Relationship between Vehicle Attributes and Vehicle Systems	50
Interfaces between Vehicle Systems	52
Setting and Analyzing Requirements	54
What Is a Requirement?	54
Why “Specify” Requirements?	54
How Are Requirements Developed?	55
Characteristics of a Good Requirement	55
Evaluations, Verification, and Validation Tests	56
Concluding Remarks	57
References	57

Chapter 3 Customer Needs, Business Needs, and Government Requirements... 59

Introduction 59

Inputs to the Automotive Development Process 60

 Customer Needs..... 60

 List of Customer Needs 61

 Mid-Size Sports Utility Vehicle (SUV)..... 61

 Heavy-Duty Pickup Truck 62

 Primary Vehicle Controls 62

 Business Needs..... 63

 Government Requirements..... 63

Obtaining Customer Inputs 64

 Observation Methods..... 64

 Communication Methods 65

 Experimentation Methods 65

 Additional Methods 66

Determining Business Needs: Product Portfolio, Model
Changes, and Profitability 66

Government Requirements for Safety, Emissions, and Fuel
Economy..... 67

 Government Safety Requirements..... 67

 EPA’s Greenhouse Gas (GHG) Emissions and NHTSA’s
 Corporate Average Fuel Economy (CAFE) Standards..... 67

 Rationale behind Footprint-Based Standard 68

Implementation Readiness of New Technologies 70

Vehicle Features: “Wow,” “Must Have,” and “Nice to Have”
Features 71

Global Customers and Suppliers 71

Comparison of Vehicles Based on Customer Needs 72

Concluding Remarks 72

References 72

Chapter 4 Role of Benchmarking and Target Setting 75

Introduction 75

Benchmarking 75

 An Example: Mid-Size Cross-over SUV 77

Photo-Benchmarking 78

Breakthrough..... 79

 Differences between Benchmarking and Breakthrough..... 80

Benchmarking Competitors’ Vehicles: An Example 80

Examples of System, Subsystem, and Component-Level
Benchmarking 87

Concluding Remarks 90

References 90

Chapter 5 Business Plan Development and Getting Management Approval..... 93

Introduction 93

Business Plan..... 93

 What Is a Business Plan?..... 93

 Contents of the Business Plan 93

 Process of Preparing a Business Plan..... 96

Risks in Product Programs..... 97

Make versus Buy Decisions 99

Concluding Remarks 99

References 100

Chapter 6 New Technologies, Vehicle Features, and Technology Development Plan..... 101

Introduction 101

Implementing New Technologies..... 101

 Major Reasons for Changes Affecting Future Vehicle Designs ... 102

 Creating a Technology Plan..... 102

 Risks in Technology Implementation 103

New Technologies 103

 Design Trends in Powertrain Development..... 103

 Smaller, Lighter, and More Fuel-Efficient Gasoline Engines.... 103

 Higher-Efficiency Transmissions..... 109

 Driver Aids and Safety Technologies 109

 Driver Information Interface Technologies 112

 Connected Vehicles or Vehicle-to-X (V2X) Technologies..... 114

 Self-Driving Vehicles 116

 Lightweighting Technologies 116

 Aerodynamic Drag Reduction..... 118

Technology Plan 118

Concluding Remarks 118

References 119

Chapter 7 Relation of Vehicle Attributes to Vehicle Systems..... 121

Introduction 121

Overview of Tasks and Relationships between Customer Needs and Systems Design..... 121

Allocation of Attribute Requirements to Vehicle Systems 124

 Development of Overall Vehicle Specifications 124

 Defining Attribute Requirements for the Proposed Vehicle 125

 Refinement of Vehicle Attribute Requirements..... 127

 Specification of Vehicle Functions from Vehicle Attribute Requirements and Allocation of Functions to Vehicle Systems.... 128

 Cascading Vehicle Attribute Requirements to Vehicle Systems.. 129

System Design Specifications..... 131

	Concluding Remarks	131
	References	132
Chapter 8	Understanding Interfaces between Vehicle Systems.....	133
	Introduction	133
	Interfaces	133
	What Is an Interface?.....	133
	Types of Interface	134
	Interface Requirements	136
	Visualizing Interfaces	137
	Representing an Interface.....	137
	Interface Diagram.....	138
	Interface Matrix.....	138
	Examples of Interface Diagram and Interface Matrix	141
	Vehicle Systems Interface Diagram and Interface Matrix	141
	Vehicle Brake System Interfaces	141
	Important Interfaces	146
	Design Trade-Offs	146
	Other Observations	147
	Design Iterations to Eliminate or Improve Interfaces.....	147
	Sharing of Common Entities Across Vehicle Lines.....	148
	Concluding Remarks	148
	References	148
Chapter 9	Cascading Vehicle Attribute Requirements to Vehicle Systems.....	151
	Introduction	151
	What Is a Requirements Cascade?	151
	Cascading Attribute Requirements to Lower Levels	153
	Example: Subattributes of Vehicle Attributes	153
	Cascading Attribute Requirements to Develop Systems	
	Design Requirements	155
	Considerations Related to Cascading Attribute Requirements	
	for Vehicle Systems	155
	Examples of Attribute Cascading.....	156
	The Brake System and Its Subsystem Requirements	156
	Concluding Remarks	165
	References	165
Chapter 10	Development of Vehicle Concepts	167
	Introduction	167
	Why Create a Vehicle Concept?	167
	Process of Developing Vehicle Concepts	172
	Other Issues Related to Vehicle Concept Creation.....	173

Product Variations and Differentiation	173
Definition of a Vehicle Platform.....	173
Number of Vehicle Concepts and Variations	174
Designing Vehicle Exterior and Interior as a System.....	174
Evaluation of Vehicle Concepts.....	177
Use of a Pugh Diagram for Concept Selection and Improvements	177
Planning for Models, Packages, and Optional Features.....	177
Concluding Remarks	178
References	178
Chapter 11 Selecting a Vehicle Concept.....	179
Introduction	179
Market Research Clinics	179
What Is Market Research?.....	179
New Concept Vehicle	180
Specific Evaluation Issues	180
Evaluation Issues for Exterior Clinics	180
Issues for Interior Clinics	181
Pros and Cons of Market Research	181
Market Research Methods Used in Product Development	182
Methods to Obtain Data	182
Personal Interview	182
Focus Group Sessions	183
Mail, Web-based, and Telephone Surveys.....	183
Market Research Clinics	184
Some Examples of Vehicle Characteristics Evaluated in	
Market Research Clinics	184
Commonly Evaluated Vehicle Characteristics Covered in	
Market Research Clinics	185
Exterior Evaluation Characteristics	185
Interior Evaluation Characteristics	186
Exterior Buck Preparation and Evaluation Setup.....	187
Interior Buck Preparation for Package Surveys	188
Precautions for Clinics to Avoid Biases	189
Sources of Errors	190
Types of Survey Questions and Data Analyses	191
Types of Market Research Clinics	194
Static versus Dynamic Clinics	194
Concluding Remarks	195
References	195
Chapter 12 Managing Vehicle Development Programs.....	197
Introduction	197
Program Manager.....	197
Program versus Project Management.....	199

Program Management Functions.....	199
Development of Detailed Project Plan	200
Project Management.....	200
Steps in Project Planning	201
Tools Used in Project Planning	202
Gantt Chart.....	202
Critical Path Method	202
Program (or Project) Evaluation and Review Technique.....	203
Work Breakdown Structure	205
Project Management Software	205
Other Tools	205
Systems Engineering Management Plan (SEMP)	206
Contents of SEMP	206
Checklist for Critical Information.....	210
Role of Systems Engineers	210
Value of Systems Engineering Management Plan.....	211
Example of a Systems Engineering Management Plan.....	211
Complexity in Program Management	219
Timings in Project Management	220
Cost Management.....	221
Challenges in Project Management.....	221
Concluding Remarks	221
References	222
Chapter 13 Computer-Aided Technologies.....	223
Introduction	223
Computer-Aided Technologies.....	223
Claims: Advantages and Disadvantages of Computer-Aided Technologies	224
Computer-Aided Design, Engineering, and Manufacturing	226
Computer-Aided Engineering (CAE) Methods and Visualizations	226
Product Visualization Tools	226
Design Tools Used in Specialized Engineering Activities.....	227
Concept Design.....	227
CAE versus Physical Tests and Prototype Builds	228
Design Review Meetings.....	228
Verification Tests	228
Validation Tests	229
Advantages of CAD	229
Concluding Remarks	230
References	230
Chapter 14 Vehicle Validation	231
Introduction	231

Scope of Validation Testing	231
When Is Validation Performed?	231
Whole-Vehicle Tests	232
Methods Used for Evaluation	233
Customer Ratings	233
Expert Reviews	238
Company Employees and Management Personnel	238
Laboratory and Controlled Field Tests	238
Some Examples of Validation Tests and Test Details	239
Vehicle Performance	239
Comfort	240
Noise, Vibration, and Harshness	241
Crash Safety	242
Styling and Appearance	243
Packaging and Ergonomics	243
Electrical and Electronics	245
Concluding Remarks	245
References	246

Chapter 15 Creating a Brochure and a Website for the Vehicle 247

Introduction	247
Why Create a Vehicle Brochure?	247
Vehicle Website versus Brochure	248
Contents of the Brochure	249
Vehicle Models, Packages, and Their Features	249
Types of Model and Optional Packages of Features	249
Vehicle Models	249
Standard Features	250
Optional Features	250
Vehicle Packages	250
Exterior and Interior Colors and Materials	251
Picture Galleries	251
Vehicle Price	251
Examples of Brochure Contents	251
Vehicle Dimensions: Exterior and Interior	252
Powertrain and Fuel Economy	252
Key Vehicle Attributes	253
Safety Features	253
Special Feature Categories	253
“Wow” Features	255
“Must Have” Features	255
“Nice to Have” Features	255
Concluding Remarks	255
Reference	255

**SECTION II *Tools Used in the
Automotive Design Process***

Chapter 16 Tool Box for Automotive Product Development 259

 Introduction 259

 Tools Used During Vehicle Development Phases 260

 Spreadsheets 260

 Design Standards and Guidelines..... 260

 Product Planning Tools 261

 Benchmarking..... 261

 Pugh Diagram..... 261

 Quality Function Deployment (QFD)..... 261

 Failure Modes and Effects Analysis..... 262

 CAD and Packaging Tools 262

 Engineering Analysis Tools..... 263

 Quality Tools 263

 Human Factors and Ergonomics Tools..... 263

 Safety Engineering Tools 264

 Measurement Tools..... 264

 Program/Project Management Tools..... 264

 Financial Analysis Tools 265

 Market Research Tools 265

 Concluding Remarks 265

 References 265

Chapter 17 Decision-Making Tools 267

 Introduction 267

 An Automaker’s Decision-Making Problem: An Example..... 268

 Decision Making in Product Design 269

 Key Decisions in Product Life Cycle 269

 Trade-Offs during Design Stages 270

 What Is Involved In Decision Making? 272

 Alternatives, Outcomes, Payoffs, and Risks..... 272

 Maximum Expected Value Principle 273

 Other Principles in Selecting Alternatives 274

 Data Gathering for Decision Making 277

 Importance of Timely Decisions 278

 Robustness Evaluation through Sensitivity Analysis 278

 Multi-attribute Decision Models 278

 Pugh Diagram..... 278

 Weighted Pugh Analysis..... 280

 Weighted Total Score for Concept Selection..... 281

 Analytical Hierarchy Method..... 282

AHP Application for Multi-attribute Decision Making	286
Example: Multiattribute Weighting	286
Informational Needs in Decision Making	289
Risks in Product Development and Product Uses	290
Definition of Risk and Types of Risks in Product Development....	291
Types of Risks during Product Use	292
Risk Analysis.....	292
Risk Matrix.....	293
Risk Priority Number	293
Problems in Risk Measurements	294
Importance of Early Decisions During Product Development	295
Concluding Comments	295
References	296
 Chapter 18 Product Planning Tools	 297
Introduction	297
Benchmarking and Breakthrough	298
Benchmarking	298
Breakthrough.....	299
Pugh Diagram	299
An Example of Pugh Diagram Application	300
Timing Charts and Gateways	302
Quality Function Deployment.....	303
An Example of the QFD Chart	307
Cascading QFDs.....	311
Advantages and Disadvantages of QFD.....	311
Failure Modes and Effects Analysis	313
An Example of an FMEA	314
Failure Modes and Effects and Criticality Analysis	318
Other Product Development Tools	318
Business Plan.....	318
Program Status Chart	320
Standards	320
CAD Tools	322
Prototyping and Simulation.....	323
Physical Mock-Ups	323
Technology Assessment Tools.....	323
Concluding Remarks	324
References	324
 Chapter 19 Financial Analysis in Automotive Programs	 325
Introduction	325
Types of Costs and Revenues in Vehicle Programs	325
Nonrecurring and Recurring Costs	326

Costs and Revenues In Product Life Cycle	326
Fixed versus Variable Costs	328
Make versus Buy Decisions.....	329
Parts and Platform Sharing	330
Quality Costs	330
Manufacturing Costs	331
Safety Costs	331
Product Termination Costs	332
Total Life—Cycle Costs	332
Effect of Time on Costs.....	333
Program Financial Plan.....	333
Example: Automotive Product Program Cash Flow	333
Challenges in Estimating Costs and Revenues	347
Product Pricing Approaches.....	347
Traditional Costs—Plus Approach	347
Market Price—Minus Profit Approach.....	349
Other Cost Management Software Applications	349
Trade—offs and Risks	351
Concluding Remarks	354
References	354
 Chapter 20 Vehicle Package Engineering Tools	 355
Introduction	355
Vehicle Packaging Background.....	355
What Is Vehicle Packaging?	355
What Is Packaged in a Vehicle?.....	356
Vehicle Packaging Organizations.....	356
Specialization within Vehicle Package Engineering.....	356
Vehicle Packaging Personnel.....	357
Package Engineering and Ergonomics	358
Principles Used in Vehicle Packaging	360
Vehicle Packaging Procedure.....	360
Vehicle Package Engineering Tasks and Process.....	360
Standard Practices Used in Vehicle Packaging	363
Mechanical Packaging.....	363
Occupant Packaging	367
CAD Models and Package Bucks.....	370
Interior Package Reference Points and Seat Track—Related Dimensions	371
Interior Dimensions	374
Driver Package Development Steps and Calculations.....	379
Entry and Exit Considerations	389
Problems during Entry and Exit.....	389
Vehicle Features and Dimensions Related to Entry and Exit.....	392
Door Handles	392

Lateral Section at the SgRP and Foot Movement Areas	392
Body Opening Clearances from SgRP Locations	393
Driver Field of View.....	394
Visibility of and over the Hood	394
Command Seating Position	395
Short Driver Problems	395
Tall Driver Problems	396
Sun Visor Design Issues	396
Wiper and Defroster Requirements.....	396
Obscurements Caused by A-Pillars.....	398
Mirror Field of View Requirements	398
Mirror Locations	398
Inside Mirror Location	398
Outside Mirror Locations	398
Procedure for Determining Driver's Field of View through Mirrors	400
Methods to Measure Fields of View.....	400
Polar Plots.....	401
Other Packaging Issues and Vehicle Dimensions	402
Concluding Remarks	402
References	402
 Chapter 21 Vehicle Evaluation Methods.....	405
Introduction	405
Overview of Product Evaluation Methods	405
Types of Data Collection and Measurement Methods	406
Methods of Data Collection and Analysis.....	407
Observational Methods.....	407
Communication Methods	408
Experimental Methods	409
Evaluations during vehicle development.....	409
Physical Tests with Measurement Instruments	409
Market Research Methods.....	410
Mail Surveys.....	411
Internet Surveys	411
Personal Interviews.....	411
Focus Group Sessions.....	411
Ergonomic Evaluations.....	412
Databases on Human Characteristics and Capabilities	413
Anthropometric and Biomechanical Human Models.....	414
Human Factors Checklists and Score Cards	414
Task Analysis.....	417
Human Performance Evaluation Models.....	418
Laboratory, Simulator, and Field Studies	419
Human Performance Measurement Methods	419

Lateral Section at the SgRP and Foot Movement Areas	392
Body Opening Clearances from SgRP Locations	393
Driver Field of View	394
Visibility of and over the Hood	394
Command Seating Position	395
Short Driver Problems	395
Tall Driver Problems	396
Sun Visor Design Issues	396
Wiper and Defroster Requirements	396
Obscurements Caused by A-Pillars	398
Mirror Field of View Requirements	398
Mirror Locations	398
Inside Mirror Location	398
Outside Mirror Locations	398
Procedure for Determining Driver's Field of View through Mirrors	400
Methods to Measure Fields of View	400
Polar Plots	401
Other Packaging Issues and Vehicle Dimensions	402
Concluding Remarks	402
References	402
 Chapter 21 Vehicle Evaluation Methods	405
Introduction	405
Overview of Product Evaluation Methods	405
Types of Data Collection and Measurement Methods	406
Methods of Data Collection and Analysis	407
Observational Methods	407
Communication Methods	408
Experimental Methods	409
Evaluations during vehicle development	409
Physical Tests with Measurement Instruments	409
Market Research Methods	410
Mail Surveys	411
Internet Surveys	411
Personal Interviews	411
Focus Group Sessions	411
Ergonomic Evaluations	412
Databases on Human Characteristics and Capabilities	413
Anthropometric and Biomechanical Human Models	414
Human Factors Checklists and Score Cards	414
Task Analysis	417
Human Performance Evaluation Models	418
Laboratory, Simulator, and Field Studies	419
Human Performance Measurement Methods	419

Observational Studies in Designing a Center Console	446
Models for Ergonomic Evaluations	446
Legibility Prediction Model	447
Windshield Veiling Glare Prediction Model	449
Simulator, Laboratory, and Field Studies	450
Driving Simulators	451
Laboratory and Field Tests	452
Package Evaluation Surveys	452
Concept Selection Market Research	455
Concluding Remarks	455
References	459
 Chapter 23 Developing a Passenger Car: A Case Study	461
Introduction	461
Customer Characteristics, Needs, Market Segment, Benchmarking, and Vehicle Specification	461
Customer Characteristics	462
Customer Needs	463
Market Segment	463
Benchmarking	463
Description of the Target Vehicle	468
Changes in the Target Vehicle	469
Assessment of Target Vehicle	469
Customer Needs Pugh Diagram	469
Vehicle Attributes Pugh Diagram	469
Vehicle Systems Pugh Diagram	469
Program Timings, Sales, and Financial Projections	474
Program Timings	474
Projected Sales	474
Financial Projections	475
Concluding Remarks	475
Reference	477
 Chapter 24 Developing a Pickup Truck: A Case Study	479
Introduction	479
Customer Characteristics and Needs, Market Segment, Benchmarking, and Vehicle Specification	479
Customer Characteristics	479
Customer Needs	481
Market Segment	483
Benchmarking and Vehicle Specification	483
Description of Target Vehicle	483
Changes in the Target Vehicle	490
Assessment of the Target Vehicle	490

Customer Needs Pugh Diagram.....	490
Vehicle Attributes Pugh Diagram	490
Vehicle Systems Pugh Diagram	492
Program Timings, Sales, and Financial Projections	492
Program Timings.....	492
Projected Sales	493
Financial Projections	494
Concluding Remarks	494
Reference	495
 Chapter 25 Developing a Sports Utility Vehicle: A Case Study	497
Introduction	497
Customer Characteristics and Needs and Market Segment	497
Customer Characteristics.....	497
Customer Needs.....	498
Market Segment.....	499
Description of the Target Vehicle.....	500
Benchmarking Data.....	500
Technology Plan	500
Assessment of the Proposed Vehicle.....	500
Program Timings, Sales, and Financial Projections	523
Program Timings.....	523
Projected Sales	523
Financial Projections	523
Concluding Remarks	523
Reference	524
 Appendix I	525
Appendix II	529
Appendix III	533
Appendix IV	535
Appendix V	537
Index	539
