CONTENTS

Numerical Simulation and Experimental Validation in Crashworthiness Applications 1
W. Jarzab, G. Bretz and R. Schwarz

Structural Impact Analysis in Design for Safety 17
G.H. Tidbury

Driveshaft Collapse Study 35
Kin S. Yeung, Fu S. Chang and Heng Yee Chen

Design Optimization using the Finite Element Program ANSYS® 51
G. Müller, B-P. Walter

Program 'BEAST' for the Analysis of Beam/Membrane Assemblies on a Desktop Computer 63
D. Kecman, I. Kecman, V. Bulat

Program 'WEST-EX' for the Optimisation of the Rectangular Section Tubes Meeting Safety Requirements 71
D. Kecman

Torsional Rigidity of a Racing Car Frame 91
J.R. Banerjee

Thermal and Mechanical Analyses of Resistance Spot Welding: A Review of Existing Work 101
S.D. Sheppard

Applications of the 'BEASY' Boundary Element Code for Thermal and Stress Analysis within the Automotive Industry 121
J. Trevelyan, C.A. Brebbia and A. Mercy

Hot Spot Stress Concept for Spot-Welded Joints 149
D. Radaj

Efficient Computer Optimisation of Vehicle Structures within the Constraints of a Limited Time and Budget Allowance 171
L.M. Hall

The P-Version of the Finite Element Method in Gear Teeth Stress Analysis 193
A. Pidello, F.A. Raffa, P.P. Strona

The Integrated use of Supercomputers and Engineering Workstations to Maximise Productivity 213
R.A. Parris

The NISA II Family of Finite Element Programs for Linear and Non-linear Analysis on PC, Mini, Supermini, Mainframe and Super-computers 229
K.S. Kothawala
