Preface *page* xiii
Acknowledgements xviii

Part I Foundations

1 Introduction **3**

1.1 Core Quantum Postulates: "Quantum Credo" 3
1.1.1 Relating Quantum Mathematics to Quantum Physics 4
1.2 The Measurement Amendments 6
1.2.1 Collapse of the Wavepacket 7
1.2.2 Information or Existence: Epiontic Quantum States? 7
1.3 Let Quantum Be Quantum: Interpreting Everett's Relative States Interpretation 8
1.3.1 Basis Ambiguity: What Happens? 9
1.3.2 Probabilities: How Likely Is It to Happen? 10
1.4 Decoherence and Einselection: a Primer 10
1.5 Summary 13
1.6 Frequently Asked Questions 14
1.7 Further Reading 15

2 Discrete Events from Repeatability: "Quantum Jumps" and Wavepacket Collapse **17**

2.1 Repeatability, Distinguishability, and the Collapse Amendment 19
2.1.1 A Repeatable Measurement: Stern–Gerlach Experiment 21
2.2 Quantum Jumps, Einselection, and Decoherence 23
2.3 Copying onto a Mixed State of the Environment 25
2.3.1 Copying onto Purified Environment 25
2.3.2 Copying onto a Mixed State of the Environment 26
2.3.3 Relaxing Repeatability 28

2.4 Actionable Information, Repeatability, and Macrostates 28
2.4.1 Records in the Macrostates: the Role of Degeneracy 29
2.4.2 Macroscopic Original in a Mixed State 31
2.4.3 Actionable Information in Presence of Decoherence 34
2.5 Actionable Mixtures Don't Mix 35
2.6 Repeatability, Orthogonality, and Positive Operator-Valued Measures 36
2.7 Repeatability and Entanglement 37
2.8 Summary: Pointer Basis, Events, and Decoherence 38
2.9 Frequently Asked Questions 40
2.10 Further Reading 42

3 Born's Rule from the Symmetries of Entanglement 44
3.1 Envariance: Entanglement-Assisted Invariance 45
3.2 Decoherence as a Result of Envariance 47
3.3 Swaps, Counterswaps, and Equal Probabilities 48
3.4 Born's Rule from Envariance 54
3.5 Inverting Born's Rule 56
3.6 Relative Frequencies from Relative States 59
3.7 Foundations of Statistical Physics from Envariance 61
3.8 Experimental Tests of Envariance 63
3.9 Discussion 66
3.9.1 Why Entanglement? Why Schmidt States? 67
3.9.2 Ignorance Interpretation of the Envariant Probabilities? 68
3.10 Summary 70
3.11 Frequently Asked Questions 72
3.12 Further Reading 74

Part II Decoherence

4 Environment-Induced Decoherence 77
4.1 Decoherence of a Qubit by a Spin Environment 78
4.1.1 Decoherence Factor 78
4.1.2 Gaussian Decoherence 80
4.1.3 The Interplay of the Gaussian and Exponetial Coherence Loss 82
4.1.4 Rotating Spin as a Decohering System 85
4.1.5 Loschmidt Echo and Decoherence 85
4.2 Dynamics of Open Quantum Systems 90
4.2.1 Master Equation: Perturbative Approach 91
4.2.2 Perturbative Master Equations for Models of Decoherence 93
4.3 Decoherence in Quantum Brownian Motion 95
4.3.1 Quantum Brownian Motion Model 95
4.3.2 Master Equation for QBM in a Thermal Heat Bath 97
4.3.3 High-Temperature Approximation in QBM 101
4.3.4 Decoherence Timescale 102
4.4 Summary: Models and Methods of Decoherence 105
4.5 Frequently Asked Questions 106
4.6 Further Reading 108

5 Decoherence, Einselection, and Its Consequences 109

5.1 Einselection of Pointer States 111
5.1.1 Basis Ambiguity and Quantum Measurements 111
5.1.2 Classical Correlations via Decoherence and Einselection 112
5.2 Predictability Sieve and Pointer States 114
5.2.1 Quantifying Predictability with the Predictability Sieve 114
5.3 Einselection, Classical Correlations, and Quantum Discord 117
5.3.1 Einselection and Mutual Information 118
5.3.2 Quantum Discord 119
5.4 Thermodynamics from the Symmetries of Entanglement 122
5.4.1 Microcanonical Equilibrium from Envariance 123
5.4.2 Canonical Equilibrium from Quantum Envariance 125
5.5 Szilard's Engine, Maxwell's Demon, and Quantum Measurements 130
5.5.1 Quantum One-Molecule Engine 132
5.5.2 Measurement, as Reported by the Demon 135
5.5.3 Common Origin of Equilibrium and Einselection 138
5.6 Decoherence in the Laboratory 139
5.6.1 Decoherence and the Entangling Interactions 140
5.6.2 Simulating Decoherence with Classical Noise 142
5.6.3 Other Testbeds for Decoherence 144
5.7 Decoherence and Interpretation 147
5.7.1 Decoherence and Quantum Foundations 148
5.7.2 Decoherence and Everett 149
5.7.3 Einselection, Decoherence, and Born's Rule 149
5.8 Einselection, Information, and the Measurement Problem 151
5.9 Summary 152
5.10 Frequently Asked Questions 153
5.11 Further Reading 156

6 Quantum and Classical in Phase Space: Decoherence and the Second Law 158

6.1 Wigner Representation and the Phase Space View of Decoherence 159
6.1.1 Decoherence of Non-local Superpositions 160
6.1.2 Predictability Sieve in Phase Space 162
6.1.3 Classical Limit in Phase Space 165
6.2 Sub-Planck Structures in Phase Space and Decoherence 167
6.2.1 Sub-Planck Structures in the Wigner Distribution Function 168
6.2.2 Sub-Planck Structures and Decoherence 172
6.2.3 Sub-Planck Structures, Decoherence, and Mixtures 174
6.3 Decoherence, Chaos, and the Second Law 175
6.3.1 Loss of Quantum–Classical Correspondence 176
6.3.2 Moyal Bracket and Liouville Flow 179
6.3.3 Symptoms of the Correspondence Loss 179
6.3.4 Restoration of the Quantum–Classical Correspondence by Decoherence 180
6.3.5 Boltzmann's H-Theorem from Decoherence 184
6.4 Summary 186
6.5 Frequently Asked Questions 188
6.6 Further Reading 189

Part III Quantum Darwinism

7 Quantum Darwinism: Environment as a Witness 193

7.1 Environment as a Witness 194
7.2 Mutual Information and Quantum Discord 197
7.2.1 Mutual Informations 198
7.2.2 Quantum Discord 200
7.3 Decohering Environment as an Amplifier 201
7.3.1 Evidence and Its Redundancy 202
7.3.2 Decoherence, c-not's and Qubits 205
7.4 Quantum Darwinism in an Imperfect c-not Model 208
7.4.1 Symmetric Quantum Mutual Information 209
7.4.2 Asymmetric Mutual Information and the Holevo Bound 210
7.4.3 Accessible Information in the Environment Fragment 211
7.4.4 Quantum Discord 213
7.5 Decohering Environment as a Witness 215
7.5.1 Mutual Information, Pure Decoherence, and Branching 216
7.5.2 Pure Decoherence and Mixed States 219
7.5.3 Redundant Decoherence 220
7.6 Environment as an Amplifier and as a Censor 222
7.6.1 Environment as an Amplifier and as a Shredder 222
7.6.2 Environment as a Censor 223
7.7 Summary 225
7.8 Frequently Asked Questions 227
7.9 Further Reading 229

8 Quantum Darwinism in Action 230

8.1 Shannon Entropy, Redundancy, and Pointer States 232
8.1.1 Shannon Information and Quantum Darwinism 232
8.2 Quantum Darwinism in Models of Decoherence 237
8.2.1 Central Spin Decohered by Non-interacting Spins 237
8.2.2 Quantum Darwinism in a Mixed Environment 241
8.2.3 Redundancy vs. Relaxation in the Central Spin Model 242
8.2.4 Quantum Darwinism in Quantum Brownian Motion 245
8.3 Seeing Is Believing: Photons as a Communication Channel 249
8.3.1 Huge Redundancy in Scattered Photons 249
8.4 Experimental Tests of Quantum Darwinism 253
8.5 Quantum Darwinism, Redundant Records, and History 254
8.6 Summary: Environment as an Amplification Channel 256
8.7 Frequently Asked Questions 259
8.8 Further Reading 260

9 Quantum Darwinism and the Existential Interpretation 262

9.1 Observers in the Classical and in the Quantum Universes 262
9.1.1 Insiders and Outsiders 263
9.1.2 Quantum Darwinism, Insiders, and Outsiders 264
9.1.3 Quantum Darwinism and the Photon Environment 265

9.2 Classical and Quantum States and Correlations 268
9.2.1 Classical Correlations and Mutual Information 269
9.2.2 From Quantum to Classical Correlations via Decoherence 271
9.2.3 Robust Classical Reality from Malleable, Entangled Quantum States 273
9.3 Observers, Records, and the Irreversibility of Quantum Measurements 275
9.3.1 Records and Reversibility 276
9.3.2 Quantum Darwinism, Amplification, and Irreversibility 280
9.4 Detaching Information from Existence 283
9.4.1 Systems, Interactions, and the Nature of Perceptions 284
9.4.2 Photohalo—Aureola of Detached Information 286
9.4.3 Photohalo and Irreversibility 287
9.4.4 Objective Classical Reality, Beables, and Extantons 288
9.4.5 Photoextantons, Causality, Information, and Existence 289
9.4.6 Photoextantons, Boltzmann Gas, and Irreversibility 290
9.4.7 From Quantum States to Relatively Objective Existence 292
9.5 Interpreting Quantum Theory 293
9.5.1 The Copenhagen Interpretation 293
9.5.2 Everett's Interpretation 296
9.6 The Existential Interpretation 300
9.6.1 Existence, Classical and Quantum 301
9.6.2 Quantum Darwinism and the Epiontic Quantum States 303
9.6.3 The Measurement Problem in the Epiontic Setting 305
9.6.4 Epiontic Constraints on the Pre-existence of Measurement Outcomes and on the "Literal Collapse" 309
9.6.5 Consensus and the Epiontic Solution to the Measurement Problem 313
9.7 Overview 322
9.8 Frequently Asked Questions 328
9.9 Epilogue: Quantum Origins of Newtonian Physics and Thermodynamics 331
