CONTENTS

PREFACE xi

SUMMARY AND HIGHLIGHTS 1

1: INTRODUCTION 4
The Problem of Mobility for Blind and Visually Impaired Pedestrians, 5
The Mobility Task, 5
Abilities and Skills, 6
Establishing Performance Criteria, 7
Component Skill Criteria, 8
Guide to the Report, 8

2: THE DEMOGRAPHY OF BLIND AND VISUALLY IMPAIRED PEDESTRIANS 10
Some Definitions, 10
Demographic Characteristics, 11
Age, 13
Onset of Visual Problems, 15
Degree of Visual Impairment, 17
Additional Impairments, 18
Social Factors, 19
Approaches to Aiding Mobility, 20
Patterns of Use and Nonuse, 21
Recommendations, 23
Surveys of ETA Users and Technology Diffusion, 23
A Normative Data Base, 24
A Survey of the Needs of Older Blind People, 24
Review and Analysis of Existing Data Bases, 24
Study of Multiple Impairments, 25
Development of a Research Agenda, 25

3: THE ASSESSMENT OF MOBILITY 26
Individual Characteristics, 26
Psychosocial Characteristics, 27
Sensory and Motor Characteristics, 27
Perceptual and Cognitive Characteristics, 28

Measures of Mobility Performance, 28
Indirect Measures, 28
Direct Measures, 29
Outcome Measures of Successful Mobility, 30
Assessment of Mobility, 31
Assessment of Mobility Aids, 31
A Standardized Method for Assessing Travel Performance, 31
Recommendations, 33
Standardized Measures of Mobility Performance, 33
Simulation Methods, 33
Improved Field Assessment Techniques, 34
Technology Benchmarks, 34
Training Programs, 35

4: PERCEPTUAL, COGNITIVE, AND ENVIRONMENTAL FACTORS 36
The Mobility Task, 36
Perceptual, Cognitive, and Motor Functions, 36
Perceptual Information, 37
Cognitive Information, 39
Perceptual-Motor Skills, 42
Mobility Skills, 43
Applications of General Knowledge, 43
Applications of Specific Knowledge, 44
Individual Differences, 45
Risk Estimation and Risk Taking, 46
Early Versus Late Blindness, 46
Overprotection, 47
Neurological Damage, 47
Remaining Vision, 48
Conclusion, 48
Recommendations, 48
Making Information Available to the Blind Traveler, 49
Forms of Information Display, 50
The Relationship Between Perceptual and Cognitive Information, 51
Perceptual Learning Principles, 51

5: SENSORY ENHANCEMENT AND SUBSTITUTION 53
The Visual System, 54
The Immediate Environment, 54
Remote Environments, 54
Sensory Enhancement, 56
The Auditory System, 56
The Somatosensory System, 57
Pressure, 58
Vibration, 58
Tactile Form Perception, 58
Texture, 59
Stereognosis, 59
Implications for Sensory Aids, 59

Existing Environmental Sensors, 60
Sonar Substitution, 60
Tactile Substitution, 61
Recommendations, 62
The Somatosensory System, 62
The Auditory System, 63
Mobility and Low Vision, 64
Detrimental Effects of Mobility Aids, 65
Animal Models, 65

6 THE TECHNOLOGY OF ELECTRONIC TRAVEL AIDS 67
Information Needs of the Pedestrian, 67
Past and Present Mobility Aids, 68
The Long Cane, 68
Electronic Travel Aids, 68
Clear-Path Indicators Versus Environmental Sensors, 69
Recent Developments, 70
Limitations of Existing Technology, 73
Recommendations, 74
Problem Definition, 75
Technology for Display Design and Simulation, 75
Technology for Optical Aids, 76
Technology for Information Acquisition, 76
Technologies for Information Display, 78
Technology for Information Processing, 80
