CONTENTS

Preface *xiii*

1 Introduction: Intersectional multilevel modelling 1

1.1 Intersectionality and the promise of quantitative analysis 1
1.2 Intended audience and uses of this book 2
1.3 Structure of the book 3

PART I
Quantitative multilevel approaches to intersectional analysis: Theoretical and statistical considerations **5**

2 Intersectionality and quantitative approaches 7

2.1 Critical issues in intersectionality 7
2.1.1 The risk of oversimplifying intersectionality 7
2.1.2 The complex dynamics of inequalities 8
2.2 Intersectional perspective in research 9
2.2.1 Power, privilege and minoritisation 9
2.2.2 Reimagining quantitative approaches through intersectionality 10
2.3 Engaging with intersectionality as (quantitative) researchers 10
2.3.1 Challenges in applying intersectionality to quantitative methods 10
2.3.2 Addressing power and positionalities in quantitative analysis 11

2.4 Multilevel intersectional modelling as a possible alternative 13
2.4.1 MAIHDA as a novel approach 13
2.4.2 Understanding the relational nature of identities 14
2.4.3 The benefits of intersectional multilevel modelling 15
2.5 Summary 15

3 Key concepts in (intersectional) multilevel modelling 18

3.1 An example of a multilevel and intersectional research question 18
3.1.1 Analysing global attitudes towards women as political leaders 18
3.1.2 Accounting for context: Individual, national and regional factors 19
3.1.3 Exploring variability across levels of analysis 21
3.1.4 Structure of an integrated dataframe 23
3.2 Multilevel linear models 23
3.2.1 Null two-level linear models (variance component models) 23
3.2.2 Null three-level linear models 24
3.2.3 Conducting a Likelihood Ratio test 25
3.2.4 Examining group effects (residuals) 26
3.2.5 Main effects two- and three-level linear models (random intercept models) 27
3.2.6 Models for non-continuous response variables 28
3.3 Intersectional multilevel models 31
3.3.1 Intersectional strata 31
3.3.2 Intersectional multilevel linear null models 32
3.3.3 Intersectional multilevel linear main effects models 33
3.3.4 Contextualised and cross-classified models 34
3.4 Summary 36

PART II
Practical applications of intersectional multilevel modelling 39

4 Data sources and pre-processing 43

4.1 Data sources 43
4.2 Preprocessing 45
4.2.1 Dealing with missing values 45
4.2.2 Examining the distribution of the response variable 48
4.2.3 Recoding and mean-centring variables 49
4.3 Exploratory data analysis 52
4.3.1 Applying weights 52

4.3.2 Case with four categories (pseudo-linear or ordinal outcomes) 54
4.3.3 Case with two categories (binary outcome) 58
4.4 Summary 62

5 Intersectional multilevel linear modelling in practice 64

5.1 Single-level linear modelling 64
5.1.1 Estimating the single-level multiple linear regression model 64
5.1.2 Adding country fixed effects to the single-level linear model 65
5.2 Multilevel linear modelling 67
5.2.1 Estimating the null multilevel linear model 67
5.2.2 Visualising the random effects of the null multilevel linear model 70
5.2.3 Assessing that a multilevel linear model is appropriate: Likelihood Ratio (LR) test 76
5.2.4 Adding individual-level main effects to the multilevel linear model 80
5.2.5 Adding country-level main effects to the multilevel linear model 83
5.3 Intersectional multilevel linear modelling 88
5.3.1 Computing intersectional strata 88
5.3.2 Estimating the null multilevel intersectional linear model 89
5.3.3 Visualising the random effects of the null multilevel intersectional linear model 93
5.3.4 Adding individual-level main effects to the multilevel intersectional linear model 95
5.4 Contextualised intersectional multilevel linear modelling 100
5.4.1 Estimating the null contextualised multilevel intersectional linear model 100
5.4.2 Visualising the random effects of the null contextualised multilevel intersectional linear model 103
5.4.3 Adding individual-level main effects to the contextualised multilevel intersectional linear model 107
5.4.4 Adding country-level main effects to the contextualised multilevel linear model 111
5.5 Summary 118

6 Intersectional multilevel binary logistic modelling in practice 119

6.1 Single-level binary logistic modelling 119
6.1.1 Estimating the single-level binary logistic model 119

6.1.2 Adding country fixed effects to the single-level binary logistic model 120
6.2 Multilevel binary logistic modelling 122
6.2.1 Estimating the null multilevel binary logistic model 122
6.2.2 Visualising the random effects of the null multilevel binary logistic model 124
6.2.3 Adding individual-level main effects to the multilevel binary logistic model 127
6.2.4 Adding country-level main effects to the multilevel binary logistic model 130
6.3 Intersectional multilevel binary logistic modelling 136
6.3.1 Estimating the null multilevel intersectional binary logistic model 136
6.3.2 Visualising the random effects of the null multilevel intersectional binary logistic model 138
6.3.3 Adding individual-level main effects to the multilevel intersectional binary logistic model 143
6.4 Contextualised intersectional multilevel binary logistic model 146
6.4.1 Estimating the null contextualised intersectional multilevel intersectional binary logistic model 146
6.4.2 Visualising the random effects of the contextualised intersectional null multilevel intersectional binary logistic model 148
6.4.3 Adding individual-level main effects to the contextualised intersectional multilevel binary logistic model 152
6.4.4 Adding country-level main effects to the contextualised intersectional multilevel binary logistic model 156
6.5 Summary 163

7 Intersectional multilevel ordinal logistic modelling in practice 164

7.1 Single-level ordinal logistic modelling 164
7.1.1 Estimating the single-level ordinal logistic model 164
7.1.2 Testing the proportional odds assumption 166
7.1.3 Adding country fixed effects to the single-level ordinal logistic model 169
7.2 Multilevel ordinal logistic modelling 172
7.2.1 Estimating the null multilevel ordinal logistic model 172
7.2.2 Adding individual-level main effects to the multilevel ordinal logistic model 176
7.2.3 Adding country-level main effects to the multilevel ordinal logistic model 182

7.3 Intersectional multilevel ordinal logistic modelling 192
7.3.1 Estimating the null multilevel intersectional ordinal logistic model 192
7.3.2 Adding individual-level main effects to the multilevel intersectional ordinal logistic model 195
7.4 Contextualised intersectional multilevel ordinal logistic model 199
7.4.1 Estimating the null contextualised intersectional multilevel ordinal logistic model 199
7.4.2 Adding individual-level main effects to the contextualised intersectional multilevel ordinal logistic model 201
7.4.3 Adding country-level main effects to the contextualised intersectional multilevel ordinal logistic model 205
7.5 Summary 213

8 Advanced extensions in applying intersectional multilevel modelling 214

8.1 Random slopes models 214
8.1.1 The role of random slopes in multilevel models 214
8.1.2 An example of allowing the effects of sex to vary across intersectional strata 216
8.1.3 Relevance of random slopes for intersectional analysis 219
8.2 A brief overview of using Markov Chain Monte Carlo estimation 221
8.2.1 Key concepts in Markov Chain Monte Carlo estimation 221
8.2.2 Using MCMC estimation for the contextualised intersectional multilevel linear model 223
8.2.3 Using MCMC estimation for the cross-classified intersectional multilevel linear model 236
8.2.4 Comparing MCMC models to other models and relevance for intersectional analysis 245
8.3 Summary 247

9 Conclusion: Towards transformative intersectional quantitative practice 248

9.1 Bridging intersectionality and quantitative methods 248
9.1.1 Intersectionality's critical roots and the quantitative turn 248
9.1.2 Intersectionality as a 'travelling' theory 249
9.1.3 A feminist intersectional ethos for quantitative research 250
9.2 Ethical considerations in intersectional data analysis 251
9.2.1 The ethics of representation and modelling minoritised groups 251

9.2.2 The risk of reifying social categories 251
9.2.3 Data justice and transparency 252
9.3 Opportunities and challenges of the MAIHDA approach 252
9.3.1 MAIHDA's contributions and analytical strengths 252
9.3.2 Data, computational and interpretational challenges 253
9.3.3 The challenges of interpreting non-linear models 254
9.3.4 Epistemological issues and the limits of quantification 254
9.4 Towards a more transformative intersectional quantitative practice 255
9.4.1 Going beyond description: process-oriented methods 255
9.4.2 From MAIHDA to (contextual) Intersectional Multilevel Modelling 256
9.4.3 Reimagining quantitative practice for intersectional analysis 257
