Contents

1 Introduction to Tissue Engineering and Regenerative Medicine 1
1.1 Introduction to Regenerative Medicine 1
1.2 The Crosstalk Between Inflammation and Regeneration: Regenerative Inflammation 4
1.3 Different Strategies in Regenerative Medicine: Tissue Engineering 6
1.3.1 Implants 6
1.3.2 Grafting 7
1.3.3 Cell-Based Therapy 8
1.3.4 Tissue Engineering 8
1.4 Basics Concepts of Tissue Engineering 8
1.4.1 Cells 10
1.4.2 Scaffolds 11
1.4.3 Stimuli 12
1.5 Some Preliminary Success Cases in TERM 12
1.5.1 Flat Tissues and Organs 13
1.5.2 Tubular Organs 15
1.5.3 Hollow Nontubular Organs 17
1.5.4 Solid Organs 17
1.6 Conclusions 20
References 20

2 Tissue Mechanobiology 27
2.1 Introduction 27
2.2 Tissue Mechanics as a Porous Material: Tissues Present a Viscoelastic Behaviour 28
2.2.1 Quantifying the Interstitial Flow in Tissues 28
2.2.2 Tissue Elasticity 30
2.2.3 Tissue Viscoelasticity 31

FYZIOLOGICKÝ ÚSTAV AV ČR
2
Fyziologický ústav AV ČR, v.v.i.
Středisko vědeckých informací
Vídeňská 1083, 142 00 Praha 4

2.3 Functions of Extracellular Matrix (ECM) 34
2.3.1 Structural Support to Maintain Tissues and Organs 34
2.3.2 Scaffold for Cells-Matrix Interaction: Mechanical Signaling 35
2.3.3 Exchange and Signalling Medium 35
2.4 Composition of the ECM 36
2.4.1 Collagen 37
2.4.2 Elastin 37
2.4.3 Glycosaminoglycans (GAGs) 37
2.4.4 Proteoglycan 39
2.4.5 Glycoproteins: Laminin and Fibronectin 40
2.5 ECM as a Biologic Scaffold for TERM 41
2.5.1 ECM Scaffolds for Organ Transplantation 41
2.5.2 ECM Scaffolds for Tissue Regeneration 42
2.5.3 Scaffolds from Cell-Derived ECM 43
2.5.4 Decellularization 44
2.6 The ECM Architecture 44
2.7 Cell-Matrix Interactions 46
2.8 Conclusions 47
References 50

3 Introduction to Cell Mechanobiology and Its Impact on Tissue Engineering and Regenerative Medicine 55
3.1 Cells as Passive and Active Materials 55
3.2 Main Mechanical Components of the Cell: The Cytoskeleton 57
3.2.1 Cell Membrane 57
3.2.2 Cell Cytoplasm: The Cytosol 59
3.2.3 Cell Nucleus 60
3.2.4 Cytoskeleton 60
3.3 Actin Filaments 62
3.4 Microtubules 62
3.5 Cytoskeletal Motor Proteins 63
3.6 Intermediate Filaments 64
3.7 Cell-Cell and Cell-Matrix Interactions 64
3.7.1 Focal Adhesions 66
3.7.2 Hemidesmosomas 67
3.7.3 Gap Junctions 67
3.7.4 Adherens Junctions and Desmosomes 67
3.7.5 Tight Junctions 68
3.8 Mechanotransduction 68
3.9 Conclusions 70
References 72

4 Cells and Growth Factors for Tissue Engineering and Regenerative Medicine 77
4.1 Introduction 77
4.2 Stem Cells 78
4.2.1 Hierarchy of Stem Cells 79
4.2.2 Embryonic Stem Cells 80
4.2.3 Induced Pluripotent Stem Cells 81
4.2.4 Adult Stem Cells 81
4.3 The Stem Cell Niche 83
4.3.1 Microenvironment of the Stem Cell Niche 83
4.3.2 Engineering the Stem Cell Niche 85
4.4 Other Cells Used in TERM 86
4.5 Growth Factors 87
4.6 Exosomes 90
4.6.1 Biogenesis and Composition of Exosomes 91
4.6.2 Exosomes in TERM 92
4.7 Cell Sheet Tissue Engineering 93
4.7.1 Harvesting of Cell Sheets 94
4.7.2 Applications of Cell Sheet Tissue Engineering 97
4.8 Conclusions 98
References 99

5 Scaffolds for Tissue Engineering and Regenerative Medicine 107
5.1 Introduction 107
5.2 Scaffold Requirements and Characteristics 109
5.2.1 Macrostructure 110
5.2.2 Porosity, Permeability and Pore Size 110
5.2.3 Mechanical Properties 111
5.2.4 Electrical Properties 112
5.2.5 Surface Properties 112
5.2.6 Degradation 112
5.3 Biomaterial Toolbox 113
5.3.1 Polymers: Natural and Synthetic 113
5.3.2 Focus on Natural Polymers: Collagen Scaffolds 114
5.3.3 Focus on Natural Polymers: Decellularized Matrix Scaffolds 115
5.3.4 Focus on Synthetic Polymers: Polyester Scaffolds 115
5.3.5 Ceramics 117
5.3.6 Focus on Ceramics: Bioactive Glass Scaffolds 117
5.3.7 Metals 118
5.3.8 Carbon-Based Materials 118
5.4 Scaffold Fabrication Techniques 119
5.4.1 Solvent Casting and Particulate Leaching 119
5.4.2 Freeze-Drying 119
5.4.3 Electrospinning 120

5.4.4 Melt Electrowriting 120
5.4.5 Additive Manufacturing Techniques 121
5.4.6 Bioprinting 122
5.5 Hydrogels 124
5.5.1 Classification of Hydrogels 124
5.5.2 Gelation 125
5.5.3 Hydrogels as Bioinks 125
5.6 Conclusions 126
References 127

6 Nanomaterials for Tissue Engineering and Regenerative Medicine 135
6.1 Introduction 135
6.2 Nanoparticles 136
6.2.1 Nanoceramics 136
6.2.2 Polymeric Nanoparticles 138
6.2.3 Metallic Nanoparticles 139
6.2.4 Carbon-Based Nanoparticles 140
6.3 Nanofibers 140
6.3.1 Fabrication of Nanofibrous Scaffolds by Polymer Self-assembly 141
6.3.2 Fabrication of Nanofibrous Scaffolds by Phase Separation 141
6.3.3 Fabrication of Nanofibrous Scaffolds by Electrospinning 142
6.4 Nanopatterned Surfaces 144
6.5 Nanomaterials in Bioinks for 3D Bioprinting 147
6.6 Conclusions 149
References 150

7 Cell–Scaffold Interactions 155
7.1 Introduction 155
7.2 The Cell Membrane 156
7.3 The Cytoskeleton 158
7.4 The Extracellular Matrix 160
7.5 Cell-Cell and Cell-Extracellular Matrix Interactions 161
7.5.1 Tight Junctions 161
7.5.2 Adherens Junctions 161
7.5.3 Desmosomes 162
7.5.4 Gap Junctions 162
7.5.5 Focal Adhesions 162
7.5.6 Hemidesmosomes 163
7.5.7 Integrins 165
7.6 Cell Adhesion to Biomaterials 165
7.6.1 Protein Adsorption 167
7.6.2 Surface Chemistry 168

7.6.3 Surface Wettability 169
7.6.4 Surface Topography 170
7.6.5 Surface Stiffness 172
7.7 Cell Responses to Scaffold Architecture 173
7.8 Conclusions 174
References 175

8 Mass Transfer, Vascularization, and Innervation of Scaffolds and Constructs 181
8.1 Introduction 181
8.2 Blood Vessels and Vascularization 183
8.3 Vascularization of Scaffolds and Constructs for Implantation 184
8.3.1 Scaffold Design 185
8.3.2 Inclusion and Delivery of Angiogenic Factors 187
8.3.3 In Vitro Prevascularization 188
8.3.4 In Vivo Prevascularization 190
8.4 Vascularization of Tissue Models 191
8.4.1 Vascularization of Organoids 191
8.5 Avascular Tissues in Tissue Engineering and Regenerative Medicine 192
8.6 The Nervous System, Nerves and Innervation 193
8.7 Innervation in Tissue Engineering and Regenerative Medicine 194
8.8 Conclusions 197
References 198

9 Bioreactors for Tissue Engineering and Regenerative Medicine 203
9.1 Introduction 203
9.2 Bioreactor Functions 204
9.3 Bioreactor Design Considerations 205
9.4 Bioreactor Types 206
9.4.1 Spinner Flasks 206
9.4.2 Rotating Wall Vessels 209
9.4.3 Perfusion Bioreactors 210
9.4.4 Hydrostatic Pressure Bioreactors 213
9.4.5 Compression Bioreactors 214
9.4.6 Electrical Stimulation Bioreactors 215
9.5 Conclusions and Future Directions 216
References 216

10 Microfluidics-Based Platforms for Tissue Engineering and Regenerative Medicine 221
10.1 Introduction 221
10.2 Microfabrication Techniques of Microfluidic Devices 223
10.3 3D Cell Culture in Microfluidics 225

10.4 Biomaterials Used in Microfluidics to Recreate Tissues: Hydrogels . . . 228
10.5 The Role of Chemical Gradients in Microfluidic-Based Chips . . . 230
10.6 The Role of Fluid Flow: Dynamic Cell Culture . . . 233
10.7 Physics of Microfluidics . . . 234
10.8 From 3D Cell Culture to Organoids . . . 239
10.9 Conclusions . . . 240
