CONTENTS

PREFACE 9
1 INTRODUCTION 11
2 CONCEPTS 14
2.1 Structure, metabolism and function 14
2.1.1 Cellular and subcellular morphology 15
2.1.2 Brain metabolism 18
2.1.3. Molecular basis of brain function 20
2.1.3.1 Signal reception 20
2.1.3.2 Signal conduction 25
2.1.3.3 Signal regulation and storage 26
2.1.3.3.1 Receptor regulation 26
2.1.3.3.2 Structural changes 27
2.2 Reflex and cognition 29
2.2.1 Importance of the reflex theory 29
2.2.2 Renaissance of cognitivism 30
2.2.3 New viewpoints 30
2.3 Information encoding and processing 32
2.3.1 Dedicated neurons 32
2.3.2 Ensemble coding 34
2.3.3 Temporal coding 34
2.3.4 Line labeling 35
2.3.5 Quantitative analysis of population response patterns 35
3 APPROACHES 39
3.1 How does the brain work? 39
3.1.1 The brain-oriented approach 40
3.1.2 The behavior-oriented approach 40
3.1.3 The model approach 41
3.1.4 Synthesis 41
3.2 Behavioral consequences of defined brain states 42
3.2.1 Brain lesions 42
3.2.2 Functional ablation 43
3.2.3 Brain stimulation 45
3.2.4 Sensory substitution 46
3.2.5 Transplantation 47
3.2.5.1 Compensation of secretory and modulatory functions 48
3.2.5.2 Ectopic sensory inputs 49
3.3 Neural correlates of specific behaviors 50

3.3.1 Unit activity studies 50
3.3.1.1 Short-term changes 51
3.3.1.1.1 Learning neurons or learning networks? 53
3.3.1.2 Steady state comparisons 54
3.3.1.2.1 Responses of individual neurons 54
3.3.1.2.2 Population responses 55
3.3.2 Neurochemical studies 59
3.4 Cellular plasticity 60
3.4.1 Death, proliferation and growth of neurons 61
3.4.2 Changes of synaptic weight 62
3.4.2.1 Long-term potentiation 62
3.4.2.2 Associative learning 63
3.4.2.3 The temporal paradox of conditioning 64
3.4.2.4 Network connectivity 66

4 MODELS OF NEURAL PLASTICITY 68
4.1 Single neuron conditioning 68
4.1.1 US applied to a single neuron 68
4.1.2 Antidromic stimulation as the US 70
4.1.3 Single cell discharge as the CS 71
4.1.4 Ectopic access through peripheral nerve autografts 74
4.2 Integrative role of chemical gradients 77
4.2.1 Spreading depression 78
4.2.2 Epileptic activity 79
4.2.3 Spike-triggered SD 81
4.2.4 Na, K- ATPase control 83
4.3 Reverberation and repetitive activity 84
4.3.1 Impulse reverberation 84
4.3.1.1 Segmentated giant fibers of invertebrates 85
4.3.1.2 Cerebello-pontine circuit 85
4.3.1.3 Physical model 86
4.3.2 Circulating autowaves 88
4.3.2.1 Ring waves 88
4.3.2.2 Spiral waves 91

5 VESTIBULAR PLASTICITY 96
5.1 Vestibuloocular reflex 96
5.2 Optokinetic trace phenomena 97
5.2.1 Lesions and functional blockade 98
5.2.2 Electrophysiological correlates 101
5.2.2.1 Vestibular nuclei 102
5.2.2.2 Flocculus 105
5.2.2.3 Mesencephalic reticular formation 105
5.3 Compensation of unilateral labyrinthectomy 105
5.4 Morphological substrate of vestibular plasticity 106
5.4.1 Optokinetic nystagmus 106
5.4.2 Storage network 108

6 LOCALIZED ENGRAMS 110
6.1 Hemispheric asymmetry in the intact brain 111
6.1.1 Asymmetry of song control in canaries 111

6.1.2 Ocular dominance in chickens . . . 112
6.1.3 Forepaw preference in mice and rats . . . 113
6.1.4 Asymmetry of audiogenic seizures . . . 113
6.2 Asymmetries caused by lateralized motivational states . . . 114
6.2.1 Hidden asymmetries . . . 114
6.2.2 Sensory asymmetries . . . 117
6.2.3 Motor asymmetries . . . 119
6.2.4 General features of motivational asymmetries . . . 122
6.3 Engram lateralization in split brain animals . . . 122
6.3.1 Section of commissural pathways . . . 123
6.3.2 Functional ablation techniques . . . 124
6.3.2.1 Primary and secondary engrams . . . 125
6.3.2.2 Facultative and imperative interhemispheric transfer . . . 127
6.3.2.3 Interhemispheric transfer of passive avoidance in chickens . . . 129
6.4 Coexistence of lateralized memory traces . . . 134
6.4.1 Conflicting tasks . . . 134
6.4.2 Interhemispheric synthesis . . . 135
6.4.2.1 Synergistic synthesis . . . 136
6.4.2.2 Antagonistic synthesis . . . 136
6.4.3 Impaired time labeling of lateralized engrams . . . 140
6.4.3.1 Interhemispheric conflict and forgetting . . . 140
6.4.3.2 Restoring engram sequentiality . . . 143
6.5 Open problems of interhemispheric transfer . . . 145
6.5.1 Is interhemispheric transfer necessary? . . . 145
6.5.2 Engrams migrate against the flow of readout signals . . . 145
6.5.3 Other instances of engram growth . . . 147
6.5.4 Observation learning and stimulus generalization . . . 148

7 MOTOR LEARNING . . . 151
7.1 Lateralized reaching in rats . . . 151
7.1.1 Electrophysiological analysis . . . 152
7.1.1.1 Unit activity correlates . . . 152
7.1.1.2 Reach-related slow potentials . . . 153
7.1.1.3 Interfering electrical stimulation . . . 153
7.1.1.4 Excitability changes . . . 157
7.1.2 Modification of movement pattern . . . 159
7.1.2.1 Slowing down the forepaw retraction . . . 160
7.1.2.2 Slowing down the ballistic forepaw extension . . . 161
7.1.2.3 Other modifications of movement pattern . . . 165
7.1.3 Signalled reaching . . . 165
7.2 Rhythmic movements . . . 167
7.2.1 Control of the frequency of licking . . . 169
7.2.1.1 Ballistic nature of licking . . . 169
7.2.1.2 Operant slowing of lick rate . . . 172
7.2.1.3 Putative central mechanisms . . . 174
7.2.2 Economy of licking control . . . 176
7.2.2.1 Failure of rats to emit single licks . . . 176
7.2.2.2 Generator arrest vs. covert licking . . . 178
7.2.2.2.1 Videorecording analysis . . . 179

7.2.2.2.2 Lick-related potentials in nucleus hypoglossus . . . 179
7.2.2.2.3 Phase shift analysis . . . 181

8 CONDITIONED TASTE AVERSION . . . 185
8.1 Food selection learning . . . 185
8.1.1 To eat or not to eat? . . . 185
8.1.2 Association of extremely delayed stimuli . . . 186
8.2 Laboratory models of food selection learning . . . 188
8.2.1 Single-bottle and two-bottle techniques . . . 189
8.2.2 AN and CTA procedures . . . 189
8.3 Different mechanisms of AN and CTA acquisition . . . 189
8.3.1 Differential sensitivity of AN and CTA to disruption . . . 192
8.3.2 Different biological significance of AN and CTA . . . 195
8.3.3 Indispensability of the short-term gustatory trace . . . 196
8.3.4 Effect of paradoxical sleep deprivation . . . 199
8.4 Retrieval of the gustatory experience . . . 202
8.4.1 CTA extinction . . . 202
8.4.2 Single lick retrieval of CTA . . . 205
8.4.3 Electrophysiology of CTA retrieval . . . 207
8.4.3.1 Unit responses to mouth rinsing . . . 207
8.4.3.2 Neural correlate of licking . . . 210
8.4.4 Lick-triggered brain stimulation . . . 214
8.4.4.1 Interference with CTA retrieval . . . 214
8.4.4.2 CTA-related excitability changes . . . 215
8.4.4.3 Evoked responses to electrical stimulation of the tongue . . . 215
8.4.5 Rewarding brain stimulation as the CS . . . 218
8.5 Conditioned taste aversion: unconditioned stimulus . . . 220
8.5.1 Routes of US action . . . 220
8.5.2 Centrally acting drugs . . . 221
8.5.2.1 Failure to demonstrate the central effect . . . 221
8.5.2.2 Harmaline and monoamineoxidase inhibitors . . . 223
8.5.2.3 Serotonergic circuits . . . 226
8.5.3 Poisons which do not elicit CTA . . . 227
8.5.3.1 Convulsants . . . 227
8.5.4 Strategies for further analysis of the US . . . 229
8.6 Learning under anesthesia . . . 230
8.6.1 Clinical evidence . . . 231
8.6.2 Animal studies . . . 232
8.6.2.1 Classical conditioning of motor responses . . . 232
8.6.2.2 Conditioned EEG arousal under urethane . . . 232
8.6.2.3 Facilitation of CER learning by epinephrine . . . 235
8.6.3 Significance of CTA experiments . . . 236
8.7 Overview of the putative mechanisms of conditioned taste aversion . . . 236

9 PERSPECTIVES . . . 238
