CONTENTS

PART ONE

BIOLOGICAL BASIS OF HUMAN EMBRYOLOGY

I. Basic study of a cell
   A. Cell structure 1
   B. Cell division 5
II. Genetics 6
III. Source of human inheritance 6
IV. Reproductive system
   Female
   A. Ovum 7
   B. Ovary 8
   Male
   A. Spermatozoon 8
   B. Testis 9
V. Gametogenesis
   A. Oogenesis. 11
   B. Spermatogenesis 12
VI. Fertilization with cell stage 13
VII. Implantation
   A. Formation of placenta 15
VIII. Development of embryo
   A. General concept 19
   B. Factors 19
   C. Formation of germ layers 19
   D. Extraembryonic structure 20
   E. External form. 21
   F. Twinning and multiple pregnancy. 22
   G. Siamese twins and duplex monsters. 25
   H. Micellaneous forms 26
IX. Fetal circulation
   A. Prenatal stage 27
   B. Postnatal change 27
   C. Amniotic fluid 28
X. Clinical diagnosis of pregnancy
   A. General aspects 30
   B. Laboratory tests and pregnant tests in home. 30
   C. Length of pregnancy 31
   D. Annex. 32
XI. Basic understanding of development and genetic disorders
   A. Causes 34
   B. Mendelian disorders 34
   C. Inborn errors of metabolism 35
   D. Multifactorial inheritance 35
XII. Terminology. 37

PART TWO

BASIC STUDIES IN GENETICS

I. History 41
II. Classification of genetics 42
III. Cytogenetic study in human 43
A. Cell division
1. Life cycle of a cell 43
2. Classification
a. Mitosis 45
b. Meiosis 47
B. Nucleus
1. Chromatin
a. Classification- 49
b. Basic structure 49
c. Sex chromatin- 51
Barr body 55
Drumstick 58
Y body 60
2. Chromosome
a. Basic structure 62
b. Morphology 63
c. Classification 63
d. Karyotypes 63
e. Chromosomal aberrations
1. Causative factors 65
2. Classification-
Numerical aberrations 67
Structural aberrations. 70
3. Mental retardation 75
f. Miscellaneous forms
1. Chromosomal association 82
2. Secondary constriction 83
3. Vacuolization of chromosome 83

PART THREE

AUTOSOMAL ABERRATIONS

I. Down's syndrome or mongolism (G-21-trisomy syndrome) 94
II. Edwards' syndrome (E18-trisomy syndrome) 100
III. Patau's syndrome (D13-trisomy syndrome) 103
IV. Cri du chat syndrome (deletion of short arm of B5) 105
V. Structural heterozygosity 107
A. Waldenström's macroglobulinemia 108
B. Sturge-Weber syndrome 110
C. Oral-Facial-Digital (OFD) syndrome 111
D. Marfan's syndrome 112
VI. Miscellaneous groups
A. Cockayne's syndrome 115
B. Erythroblastic endopolyploidy 116
C. Bloom's syndrome or Bloom-German syndrome 117
D. Congenital aplastic anemia 119
VII. Annex – case reports
A. Cleft palate 123
B. Anorexia nervosa 126

PART FOUR

SEX CHROMOSOMAL ABERRATIONS

I. The origin of sex chromosomal aberrations 133
II. Indication for sex chromosome study 140
III. Classification
A. Turner's syndrome 141
B. Klinefelter's syndrome 147
C. Mosaicism 154
IV. Intersexuality
A. True hermaphroditism 157
B. Pseudohermaphroditism
1. Male type 159
2. Female type 165
V. Other type of sex chromosome anomaly
A. Partial deletion of Y chromosome 167

PART FIVE

CHROMOSOMAL ABERRATIONS IN HUMAN TUMORS

I. History . . . 176
II. Etiology . . . 176
III. Indication for cytogenetic studies of tumors . . . 177
IV. Tumors of reticuloendothelial system
A. Myelocytic leukemia
1. Acute . . . 178
2. Chronic . . . 180
B. Other myeloproliferative disorders
1. Polycythemia vera . . . 185
2. Myeloid metaplasia . . . 187
3. Thrombocythemia . . . 187
4. Erythremic myelosis (EM). . . Di Guglielmo's syndrome . . . 188
5. Atypical myeloproliferative syndrome and myeloid immaturity . . . 188
6. Multiple myeloma and Waldenström's macroglobulinemia . . . 188
7. Myelofibrosis . . . 189
C. Lymphocytic leukemia
1. Acute . . . 190
2. Chronic . . . 193
D. Lymphosarcoma and lymphoma . . . 195
E. Primary solid tumors and their metastases . . . 209
F. Leukemia associated with Down's syndrome . . . 209
V. Neoplastic disease in other tissues
A. Carcinoma
1. Intra-epithelial carcinoma of the cervix uteri (carcinoma in situ and dysplasia) . . . 210
2. Invasive carcinoma of the cervix . . . 211
3. Hydatidiform mole, malignant mole and chorionepithelioma . . . 212
4. Carcinoma of endometrium . . . 215
5. Testicular carcinomas . . . 216
B. Malignant effusions . . . 218
C. Specialized tumor types
1. Glial cell tumors (glioma) . . . 219
2. Medulloblastoma . . . 220
3. Teratoma . . . 225
4. Melanoma . . . 226
5. Nephroblastoma . . . 228
6. Meningoma . . . 230
7. Hepatoma . . . 231
8. Breast cancer . . . 232
9. Miscellaneous types . . . 234
D. Occurrence of tumors associated with chromosome and sex chromatin aberrations . . . 234
VI. Certain rare genetic diseases associated with cancer-prone disorders
A. Bloom's syndrome (Bloom-German syndrome) . . . 238
B. Fanconi's anemia . . . 238
C. Louis-Bar syndrome (ataxia telangiectasia) . . . 238
D. Xeroderma pigmentosum . . . 240
E. Werner's syndrome . . . 241
F. Annex – Family study . . . 242
VII. Incidence . . . 245

PART SIX

CHROMOSOMAL ABERRATIONS IN ABORTION AND PRIMARY AMENORRHEA

I. Abortions
A. Spontaneous abortion 251
B. Therapeutic abortion 257
C. Induced abortion. 257
II. Primary amenorrhea. 258

PART SEVEN

DIAGNOSTIC METHODS

I. Tissue culture
A. Introduction. 263
B. Classification 264
C. Procedures 265
II. Sex chromatin survey. 266
III. Methods used for human chromosome study
A. General procedures of cytogenetic laboratory
1. Tests. 267
2. Culture of whole blood. 267
3. Direct bone marrow preparation. 269
4. Culture of bone marrow 269
5. Sex chromatin study 270
IV. Special stain for human chromosome study
A. Autoradiographic study 272
B. Fluorescence study (QM technique) 274
C. Acetic/Saline/Giemsa technique (ASG) 277
D. C-Bands. 279
E. R-Bands. 279
F. Micellaneous methods
1. F-banding (Feulgen stain) 280
2. CT- banding 280
3. G- bands of prophase 280
4. Sister chromatid study by Giemsa method 280
5. D-Bands. 280
6. LBA technique 280
V. Methods for screening and counting 282
VI. Additional equipments for cytogenetic study
A. Electron microscope 283
B. Computer 285
C. Cytofluorograf 286
VII. Materials used for cytogenetic study 288
VIII. Clinical laboratory normal values (partinent tests for cytogenetic study) 289

ANNEX – DARK ROOM WORKING
I. Equipments and supplies. . . . 291
II. Procedures 291

PART EIGHT

GENETIC COUNSELLING

I. Facing patients' risk 302
II. Methods used for diagnosis
A. Amniocentesis 302
B. Ultrasound examination 302
III. Treatments
A. Medical treatment 302
B. Surgical treatment 302
C. Follicle stimulating hormone 302
D. Techniques for fertilization of gametes (IVF, ET & GIFT) 303
E. Therapeutic abortion 303
IV. Prevention 303
V. Annex 303

PART NINE

CONCLUSION

I. Purpose of cytogenetic study 308
II. Clinical indication for cytogenetic study 308
III. Indication for further cytogenetic study 308
BIBLIOGRAPHY 309
INDEX 342
