Contents

About the editor **xvii**

1 Introduction **1**
David Trousdale
1.1 Alternatives to EV batteries 3
1.1.1 Hydrogen 3
1.1.2 Synthetic fuels and e-fuels 4
1.2 Plug-in charge point infrastructure 5
1.3 Geographic focus 7
1.4 The structure of this book 8
1.5 Summary 10
References 10

2 The drive to decarbonise, a historical perspective and where EV infrastructure plays a part **15**
David Trousdale
2.1 Climate change, net zero and decarbonisation: the origins of the concept 16
2.1.1 The nineteenth century: the foundations of the theory 16
2.1.2 The twentieth century: the theory takes shape 16
2.1.3 Settling on the definitions of climate change, decarbonisation and net zero 18
2.2 The rise of climate change governance: when did governments and societies start taking climate change seriously? 21
2.3 Early attempts to introduce interventions to achieve net zero 23
2.4 Understanding net zero and decarbonisation: a sectoral approach 25
2.5 Transport, its contribution to emissions and interventions to decarbonise 26
2.6 Transport decarbonisation from a road-based perspective 28
2.7 The history of EVs 30
2.8 The history of charge point infrastructure 32
2.9 EVs and charge points: the history of targets and progress to date 35
2.10 Deploying charge points effectively: critical to the future EV transition 40
References 40

3 Deploying EV infrastructure: the overall process and key stakeholders **47**
David Trousdale
3.1 The overall process 47
3.1.1 The initial decision to deploy the infrastructure 49
3.1.2 Determining the geographic area to deploy 51
3.1.3 The business case including seeking funding 54
3.1.4 Planning deployment at a local level 57
3.1.5 Governance and approvals 59
3.1.6 Deploying charge points 61
3.1.7 Operations, maintenance and monitoring 62
3.1.8 Upgrading and decommissioning 63
3.2 Key stakeholders 63
3.2.1 The charge point operator 64
3.2.2 The landowner 64
3.2.3 The local authority, council or state government 64
3.2.4 The power provider or DNO 65
3.2.5 The regional or national transport body/department 66
3.2.6 The national government including multi-national organisations 66
3.2.7 Consultancies 66
3.2.8 Residents/citizen groups 67
References 67

4 The strategy, policy and funding environment **69**
David Trousdale
4.1 The United Kingdom 69
4.1.1 Powering Up Britain: The Net Zero Growth Plan 70
4.1.2 Net Zero Strategy: Build Back Greener and Decarbonising Transport: A Better, Greener Britain 70
4.1.3 Taking Charge: The Electric Vehicle Infrastructure Strategy and Transitioning to Zero Emission Cars and Vans: 2035 Delivery Plan 71
4.1.4 Building Regulations: Approved Document S 72
4.1.5 Rapid Charging Fund 72
4.1.6 Local Electric Vehicle Infrastructure Fund and On-Street Residential Chargepoint Scheme 72
4.1.7 Public Charge Point Regulations 73
4.1.8 British Standards Institute (BSI) PAS 1899:2022 74
4.1.9 Progress to date and challenges ahead 74
4.1.10 Anticipated changes in policy and strategy 76
4.2 The European Union 77
4.2.1 European Green Deal 78
4.2.2 Fit for 55 and Alternative Fuels Infrastructure Regulation (AFIR) 78

4.2.3 Sustainable & Smart Mobility Strategy and Recharge and Refuel 80
4.2.4 Progress to date and challenges ahead 80
4.2.5 Anticipated changes in policy and strategy 81
4.3 France 81
4.3.1 Law on Mobility (LOM) 81
4.3.2 France Recovery Plan (France Relance) 82
4.3.3 EV Infrastructure Charging Programme (ADVENIR) 82
4.3.4 Building Control Regulations 83
4.3.5 Progress to date and challenges ahead 83
4.3.6 Anticipated changes in policy and strategy 84
4.4 Germany 84
4.4.1 Charging Infrastructure Masterplan 84
4.4.2 Deutschlandnetz Initiative 84
4.4.3 Installing on motorways 85
4.4.4 Installing alongside state and provincial roads 85
4.4.5 Privately owned locations with public charge points 85
4.4.6 Installing charge points in flats and apartments 85
4.4.7 German charging station regulations 85
4.4.8 Subsidies and incentives 86
4.4.9 Progress to date and challenges ahead 86
4.4.10 Anticipated changes in policy and strategy 87
4.5 The United States 87
4.5.1 Infrastructure Investment and Jobs Act (IIJA) 87
4.5.2 Inflation Reduction Act (IRA) 88
4.5.3 State initiatives 88
4.5.4 Other federal programmes 89
4.5.5 President Biden's 500,000 charge point goal 90
4.5.6 Progress to date and challenges ahead 90
4.5.7 Anticipated changes in policy and strategy 91
4.6 Canada 91
4.6.1 Canada's Electric Vehicle Availability Standard 92
4.6.2 Electric Vehicle Charging Infrastructure for Canada Strategy 92
4.6.3 Zero-Emission Vehicle Infrastructure Programme (ZEVIP) 92
4.6.4 Electric Vehicle and Alternative Fuel Infrastructure Deployment Initiative (EVAFIDI) 93
4.6.5 Canadian Infrastructure Bank (CIB) funding for EV charge points 93
4.6.6 The Canadian Electrical Code and National Building Code 94
4.6.7 Provincial incentives and other mandates 94
4.6.8 Progress to date and challenges ahead 95
4.6.9 Anticipated changes in policy and strategy 96

4.7 Australia 96
4.7.1 National Electric Vehicle Strategy (NEVS) 96
4.7.2 State and territory policies 98
4.7.3 Installing and operating charge points 99
4.7.4 Progress to date and challenges ahead 99
4.7.5 Anticipated changes in policy and strategy 100
4.8 New Zealand 100
4.8.1 Charging Our Future: National Electric Vehicle Charging Strategy For Aotearoa New Zealand 2023 – 2035 100
4.8.2 Delivering a nationwide network 103
4.8.3 Supercharging EV Infrastructure Work Programme 103
4.8.4 Regional EV charging plans 104
4.8.5 Progress to date and challenges ahead 104
4.8.6 Anticipated changes in policy and strategy 105
References 105

5 Demand and supply modelling including predicting utilisation 117
Andrew McGordon, Stuart Bradley and David Trousdale
5.1 Electrical supply 117
5.2 Electrical consumption 122
5.3 Interplay of power demand and supply 124
5.4 EVs 124
5.4.1 EV penetration 124
5.5 Charge point infrastructure 125
5.5.1 Charge point costs and emissions 125
5.5.2 Grid electrical context 129
5.6 Translating grid demand and supply into charge point demand and supply 129
5.6.1 Demand analysis 130
5.6.2 Utilisation analysis 133
5.6.3 Financial modelling 137
5.7 Translating this into real-world locations 138
5.7.1 Real-world examples 138
5.8 Conclusions 140
References 140

6 Charge point technologies 143
Stuart Bradley and David Trousdale
6.1 EV architecture 143
6.1.1 Vehicle battery types 143
6.1.2 Charging methods and on-board control 144
6.2 EV makes and models – a UK context 144
6.3 Vehicle cables and connectors 146
6.4 AC charge points and charging 147
6.4.1 Power supply 147

6.4.2 Public charging 148
6.4.3 Home charge point costs 148
6.4.4 AC charge point system innovation 149
6.4.5 AC versus DC charging 150
6.4.6 Control and monitoring of charging operations for both AC and DC charging 150
6.4.7 AC use cases 151
6.5 DC charging 152
6.5.1 DC charge points 152
6.5.2 DC charging innovations 153
6.5.3 DC charging use cases 154
6.6 Platforms and back office systems 155
6.6.1 Platforms and back office systems today 155
6.6.2 Current technology standards 156
6.6.3 Platforms and back office systems – real-world use cases 156
6.7 Other technologies deployed at charge points 157
6.8 Conclusion 157
References 157

7 Planning for deployment 161
David Trousdale
7.1 The initial decision to deploy the infrastructure 161
7.2 Determining the geographic area to deploy 170
7.3 The business case including seeking funding 175
7.4 Planning deployment at a local level 181
7.5 Governance and approvals 185
References 189

8 Deploying charging infrastructure 191
Myles Roberts and David Trousdale
8.1 Project requirements established prior to deployment 191
8.2 Stakeholder management planning prior to deployment 192
8.3 The role of project management prior to deployment 193
8.3.1 Project planning 193
8.3.2 Contract management 194
8.3.3 Change management 194
8.3.4 Risk management 194
8.3.5 Resource management 195
8.3.6 Budgeting and cost control 195
8.3.7 Quality management 195
8.3.8 Progress tracking and reporting including scheduling and time management 195
8.3.9 Communication and stakeholder management 196
8.4 Construction (Design and Management) (CDM) regulations relating to EV charge point installation 196

8.4.1 The client 197
8.4.2 The principal designer 197
8.4.3 The principal contractor 198
8.4.4 Construction phase plan 198
8.4.5 Designer responsibilities 199
8.4.6 Contractor responsibilities 200
8.5 Translating the theory into practice: charge point power considerations 200
8.5.1 Level 1 AC on-street residential charge points 200
8.5.2 Level 2 AC on-street residential and destination charge points 201
8.5.3 Level 3 DC en route charge points 201
8.6 Translating the theory into practice: the key steps when deploying charge points 201
8.6.1 Mobilisation, construction and commissioning 202
8.6.2 Construction step 205
8.6.3 Opening to the public 206
8.7 Translating the theory into practice: real-world projects and case studies where charge points have been deployed 206
8.7.1 Residential charging 207
8.7.2 Destination charging 211
8.7.3 En route charging 212
8.8 Conclusion 213
References 214

9 Operating, maintaining and decommissioning charge points 215
Myles Roberts and David Trousdale
9.1 British government regulations 216
9.2 Operating a charge point and its supporting ecosystem 216
9.2.1 The charge point management system 216
9.2.2 Driver support 219
9.3 Charge point monitoring and reporting 220
9.3.1 Charge point reliability 220
9.3.2 Charge point utilisation 221
9.4 Charge point maintenance 221
9.4.1 Planned maintenance 222
9.4.2 Unplanned maintenance 223
9.5 Charge point end of life 224
9.5.1 Relocation 224
9.5.2 Replacement 226
9.5.3 Retire (decommission) 227
9.5.4 Role of the CMS 229
9.6 Conclusion 229
References 230

10 Stakeholder perspectives **231**
David Trousdale
10.1 CPO 232
10.1.1 Their role 232
10.1.2 What they want to achieve 234
10.1.3 What challenges they face 236
10.1.4 Their importance as a stakeholder 238
10.1.5 Changes throughout the planning, build and operations stages 238
10.2 The landowner 239
10.2.1 Their role 239
10.2.2 What they want to achieve 241
10.2.3 What challenges they face 242
10.2.4 Their importance as a stakeholder 243
10.2.5 Changes throughout the planning, build and operations stages 243
10.3 The local authority, council or state government 244
10.3.1 Their role 244
10.3.2 What they want to achieve 245
10.3.3 What challenges they face 247
10.3.4 Their importance as a stakeholder 248
10.3.5 Changes throughout the planning, build and operations stages 248
10.4 The regional or national transport body or department 248
10.4.1 Their role 248
10.4.2 What they want to achieve 251
10.4.3 What challenges they face 251
10.4.4 Their importance as a stakeholder 252
10.4.5 Changes throughout the planning, build and operations stages 253
10.5 The distribution system operator/distribution network operator 253
10.5.1 Their role 254
10.5.2 What they want to achieve 256
10.5.3 What challenges they face 256
10.5.4 Their importance as a stakeholder 257
10.5.5 Changes throughout the planning, build and operations stages 257
10.6 The national government including multi-national organisations 257
10.6.1 Their role 258
10.6.2 What they want to achieve 260
10.6.3 What challenges they face 260
10.6.4 Their importance as a stakeholder 261
10.6.5 Changes throughout the planning, build and operations stages 261
10.7 Consultancies 262

10.7.1 Their role 262
10.7.2 What they want to achieve 264
10.7.3 What challenges they face 265
10.7.4 Their importance as a stakeholder 265
10.7.5 Changes throughout the planning, build and operations stages 266
10.8 Resident and citizen groups 266
10.8.1 Their role 266
10.8.2 What they want to achieve 268
10.8.3 What challenges they face 268
10.8.4 Their importance as a stakeholder 269
10.8.5 Changes throughout the planning, build and operations stages 269

11 Looking to the future: where is EV infrastructure heading **271**
David Trousdale
11.1 Future trends in EVs which will impact on charge point infrastructure 271
11.1.1 Projected EV growth to 2035 271
11.1.2 Projected developments in EV batteries 272
11.1.3 Developments in vehicle charging technologies 273
11.1.4 The impact of AI on vehicles 275
11.2 Future trends in charge point infrastructure 275
11.2.1 Impact of EV uptake on power demand 276
11.2.2 Projected charge point numbers across different geographies 278
11.2.3 Future utilisation patterns 280
11.2.4 Future business and commercial models, underpinned by innovations in charge point technologies 282
11.2.5 Emerging charge point standards and requirements 288
11.2.6 The role of AI in charge points 291
11.3 The impact of development in EV cars and vans on other modes 292
11.4 Summary of future trends 293
References 295

12 Conclusions **301**
David Trousdale
12.1 Key takeaways from each chapter 302
12.1.1 Introduction 302
12.1.2 The drive to decarbonise, a historical perspective and where EV infrastructure plays a part 303
12.1.3 Deploying EV infrastructure: the overall process and key stakeholders 305
12.1.4 The strategy, policy and funding environment 307

12.1.5 Demand and supply modelling including predicting utilisation 311
12.1.6 Technology considerations 312
12.1.7 Planning for deployment 314
12.1.8 Deploying charge point infrastructure 315
12.1.9 Operating, maintaining and decommissioning infrastructure 317
12.1.10 Stakeholder perspectives 319
12.1.11 Looking to the future: where is EV infrastructure heading 321
12.2 Key factors common across the chapters 323
12.3 Towards the future 325
12.4 Final remarks 325
References 326
