Contents

Foreword xv
About the editors xvii

1 Introduction 1
Shaoping Bai, Gurvinder Virk and Thomas Sugar
References 6

2 Survey of industrial exoskeletons—manufacturers, products, market, and challenges 7
Thomas G. Sugar and Borislav Marinov
2.1 Introduction 7
2.1.1 Arm Support 8
2.1.2 Back support 10
2.1.3 Leg support 13
2.1.4 Power glove 14
2.1.5 Tool holding 15
2.2 Markets and market challenges 17
2.3 Conclusions 17
References 18

3 Lower-limb wearable robotics 19
Thomas G. Sugar, David G. Armstrong, Bijan Najafi and Sangram Redkar
3.1 Background 19
3.2 Definition of wearable robotic system 20
3.3 Promise and potential of wearable robotic systems 21
3.4 Challenges 21
3.5 Lower-limb wearable systems 23
3.6 Lower-limb orthoses 23
3.7 Lower-limb prostheses 24
3.8 Lower-limb exoskeletons 25
3.9 Legged rehabilitation 28
3.10 Future vision 29
References 30

4 Review of exoskeletons for medical and service applications: recent research on wearable robots, with a focus on lower extremity exoskeletons 39
Jan F. Veneman, Dirk Lefeber and Nicola Vitiello
4.1 Introduction 39

4.1.1 What are wearable robots and lower extremity exoskeletons? 39
4.1.2 European research funding structure 40
4.2 Review of exoskeleton research projects in Europe 41
4.2.1 General directions 41
Acknowledgements 80
References 80

5 Control and performance of upper- and lower-extremity SEA-based exoskeletons **81**
Crea Simona, Parri Andrea, Trigili Emilio, Baldoni Andrea, Muscolo Marco, Fantozzi Matteo, Moisè Matteo, Cortese Mario, Giovacchini Francesco, Carrozza Maria Chiara and Vitiello Nicola
5.1 Compliant actuators with series elasticity for wearable robots 82
5.2 NEUROExos elbow module 85
5.2.1 SEA architecture: mechanics and control 86
5.2.2 High-level control 88
5.3 NEUROExos shoulder–elbow module 89
5.3.1 SEA architecture: mechanics and control 90
5.3.2 High-level control 92
5.4 Active pelvis orthosis 92
5.4.1 SEA architecture: mechanics and control 93
5.4.2 High-level control 95
5.5 Performance, strengths, and challenges of SEAs in wearable robotics 95
References 100

6 Soft wearable robots **105**
Connor McCann, Krithika Swaminathan and Conor J. Walsh
6.1 Introduction 105
6.2 Soft wearable robots to assist the lower extremity 106
6.3 Soft wearable robots to assist the upper extremity 111
6.4 Soft wearable robots to assist the back 114
6.5 Soft wearable robots for implantable applications 116
6.6 Emerging directions in soft wearable robots 118
References 120

7 Soft wearable assistive robotics: exosuits and supernumerary limbs **133**
Lorenzo Masia, Irfan Hussain, Michele Xiloyannis, Claudio Pacchierotti, Leonardo Cappello, Monica Malvezzi, Giovanni Spagnoletti, Chris Wilson Antuvan, Dinh Binh Khanh, Maria Pozzi and Domenico Prattichizzo
7.1 Introduction 134
7.2 Exosuits 136
7.2.1 Design and actuation 137
7.2.2 Control 141

7.2.3 Evaluation 146
7.2.4 Discussion 148
7.3 Supernumerary limbs 150
7.3.1 Design and actuation 151
7.3.2 Control 153
7.3.3 The hRing 154
7.3.4 The frontalis muscle cap 156
7.3.5 Evaluation 157
7.3.6 Performance evaluation 157
7.3.7 Tests with chronic stroke patients 159
7.3.8 Discussion 160
Acknowledgments 162
References 162

8 Design and control of spherical shoulder exoskeletons for assistive applications 171
Shaoping Bai, Simon Christensen and Muhammad Raza Ul Islam
8.1 Introduction 171
8.2 State-of-the-art in shoulder exoskeletons 172
8.3 Kinematics of spherical shoulder exoskeleton 174
8.3.1 Planar kinematics of the DPL 175
8.3.2 Kinematics of the shoulder mechanism 176
8.4 Shoulder mechanism design 177
8.5 Control strategies of exoskeleton shoulders 179
8.5.1 State-of-the-art exoskeleton control 179
8.5.2 Control algorithms 180
8.5.3 Trajectory-based control 180
8.5.4 Interaction-based control 182
8.6 Control of the shoulder mechanism 183
8.6.1 System description 183
8.7 Shoulder joint usability test 185
8.8 Assistance performance assessment 186
8.9 Other development of upper-body development 187
8.10 Conclusions 188
References 188

9 Real-time gait planning for lower limb exoskeleton robots 193
Xinyu Wu, Xiangyang Wang, Yue Ma, Can Wang and Du-Xin Liu
9.1 Introduction 193
9.2 SIAT anthropomorphic exoskeleton 195
9.2.1 System design 195
9.2.2 Gait planning method 196
9.2.3 Experiments 199
9.3 Parallel non-anthropomorphic exoskeleton 201
9.3.1 System design 201

9.3.2 Trajectory planning based on human–machine dynamics 202
9.3.3 Controller design 207
9.3.4 Experiments 209
9.4 Conclusion 211
References 212

10 Walking assistive devices based on inclusive design 215
Eiichiro Tanaka, Keiichi Osawa and Kei Kakagawa
10.1 Introduction 215
10.2 Development of the life support devices using Inclusive design 217
10.3 Full-leg assistance devices 221
10.3.1 Arm and leg assistance: Type 1 221
10.3.2 Full-leg assistance and lifter: Type 2 221
10.3.3 Full-leg assistance: Type 3 (4 motors) 222
10.3.4 Full-leg assistance: Type 4 (6 motors) 223
10.4 Ankle assistance devices 224
10.4.1 One side and motorized: Type 5 224
10.4.2 Both sides and motorless: Type 6 225
10.4.3 Both sides and motorized: Type 7 226
10.5 Haptics device: Type 8 228
10.6 Automatically tuned assistance system 229
10.7 Conclusion and future work 231
References 232

11 Calibration platform for wearable 3D motion sensors 237
Bingfei Fan, Qingguo Li, Chao Wang and Tao Liu
11.1 Introduction 237
11.2 Design of instrumented gimbal 239
11.2.1 The mechanical structure of the instrumented gimbal 239
11.2.2 The controller of the designed gimbal 241
11.2.3 The method for eliminating the magnetic disturbances 242
11.2.4 Calibration of the gimbal 242
11.3 Orientation evaluation with instrumented gimbal 244
11.3.1 Orientation error analysis using the instrumented gimbal 244
11.3.2 Selected wearable motion sensor 248
11.3.3 Sensor configuration 248
11.3.4 Hard-iron calibration for magnetometer 249
11.3.5 Coordinate frame alignment (CFA) for WMS before experiments 250
11.4 Experimental method 250
11.4.1 Static accuracy test 250
11.4.2 Dynamic accuracy test 251
11.4.3 The effect of magnetic disturbances 251
11.5 Results and discussion 251
11.5.1 Static accuracy 251

11.5.2 Dynamic accuracy 252
11.5.3 The effect of magnetic disturbances 254
11.6 Conclusion 256
Acknowledgments 257
References 258

12 New wearable sensors for onsite ergonomic assessment 261
Abdullah Tahir, Matteo Musso, Ming Shen and Shaoping Bai
12.1 Background 261
12.2 DULA method 264
12.2.1 RULA background 264
12.2.2 DULA kinematics 265
12.3 The DULA system 267
12.3.1 Hardware 267
12.3.2 Software 268
12.4 Lab validation 268
12.5 An industrial case 270
12.6 Discussion 270
12.7 Conclusion 272
12.8 Future enhancements 273
References 273

13 Usability engineering for designing the user interface of exoskeletons 277
Philip Lance and Gurvinder Singh Virk
13.1 Introduction 277
13.2 Usability, Human Factors (HF), Ergonomics and User Experience (UX) 278
13.2.1 Origins of Usability, Human Factors, Ergonomics and User Experience 278
13.2.2 Usability Engineering is a necessity for designing exoskeletons 280
13.2.3 Usability and the development of safe and effective Medical Devices 281
13.3 Usability Engineering applied to Medical Device design development 282
13.3.1 The focus of Usability Engineering in Medical Device design development 282
13.3.2 Usability Engineering and risk management 283
13.3.3 Overview of usability during a design process 283
13.3.4 User research 283
13.3.5 Risk analysis 286
13.3.6 Design and usability formative evaluations 292
13.3.7 Usability summative evaluation/validation test 293
13.3.8 Post-market surveillance/vigilance 294

13.4 Options for a Usability Engineering Process (UEP) for non-medical exoskeletons 294
13.4.1 UEP for developing user interfaces of non-medical exoskeletons 295
13.4.2 User research 295
13.4.3 Risk assessment 295
13.4.4 Design and usability evaluation/tests 304
13.5 Conclusions 305
References 305

14 Lessons learned from exoskeletons developed from the perspective of geographical and/or user acceptance 307
Bérenger Le Tellier
14.1 Musculoskeletal disorders 307
14.1.1 Definition 307
14.1.2 Global burden 308
14.1.3 How to prevent health and safety at work? 309
14.2 Exoskeletons: what are we talking about? 311
14.2.1 Generic word and preconceived idea 311
14.2.2 Definitions 312
14.2.3 History 312
14.2.4 Effective usage 314
14.3 Developing a user-accepted exoskeleton: a challenging endeavor 315
14.3.1 The Shiva Exo, an ambitious project 315
14.3.2 Global assistance (Shiva Exo) *versus* local assistance (HAPO) 317
14.3.3 The HAPO.2: more than a product, a comprehensive approach 319
14.3.4 Some challenges remain: addressing hurdles in exoskeleton development 324
14.4 Conclusion 326
References 327

15 Test methods for exoskeletons—lessons learned from industrial and response robotics 331
Roger Bostelman and Tsai Hong
15.1 Introduction 331
15.2 Exoskeleton performance metrics 333
15.3 Standards 335
15.3.1 Safety standards 335
15.3.2 Cross-industry performance standards 337
15.4 Cross-industry measurements applicable to exoskeletons 340
15.4.1 Joint rotation axis location 340
15.4.2 Industrial mobile manipulator 346
15.4.3 Response robots 348

15.5 Recommended test methods for exoskeletons 349
15.5.1 Load handling 349
15.6 Summary and conclusions 354
Acknowledgments 355
References 355

16 International regulations for wearable exoskeletons 359
Koen Chielens and Gurvinder S. Virk
16.1 Introduction 359
16.1.1 Machinery and medical applications of exoskeletons 361
16.1.2 Risk approach for "machinery exoskeletons" vs "medical exoskeletons" 364
16.2 Legislation applicable to wearable exoskeletons 367
16.2.1 Legislation in Europe 367
16.2.2 Legislation in other parts of the world 368
16.3 Application of European directives/regulations to exoskeletons (non-medical) 369
16.3.1 Machinery legislation 369
16.3.2 Conformity procedures for non-medical exoskeletons 370
16.3.3 Machinery Regulation 2023/1230 372
16.3.4 What is new and relevant for non-medical exoskeletons? 373
16.4 Application of European directives/regulations to exoskeletons (medical) 374
16.4.1 Standards for medical devices 374
16.4.2 IEC 60601 Standards Series 379
16.4.3 Regulations for medical exoskeletons 380
16.5 Exoskeletons for the elderly 382
16.6 Conclusions 384
References 385

17 Conclusions 389
Shaoping Bai, Gurvinder Virk and Thomas Sugar
References 391
