Contents

Periodic Table vii

Preface xiii

To the Student: How to Use this Book xiv

Acknowledgements xv

Useful Physical Constants; General Data; Conversion Factors; Using the NIST Website xvi

1 Units and Measurement 1

1.1 Very small and very big numbers 1
1.2 Logarithms 2
1.3 Units 3
1.4 Errors in experiments 5
1.5 Reporting measurements 9
Revision questions 11

2 Elements, Compounds and Reactions 12

2.1 Matter, mass and energy 12
2.2 Physical and chemical changes 16
2.3 Chemical formulae 17
2.4 Writing chemical equations 21
2.5 Competing reactions 22
Revision questions 24

3 Inside the Atom 26

3.1 Atomic structure 26
3.2 Isotopes 29
3.3 Mass spectrometer 33
3.4 Types of mass spectrometers 35
3.5 Electronic structure of atoms 37
3.6 Evidence for the existence of energy levels in atoms 38
3.7 More advanced ideas about electronic structure 41
Revision questions 45

4 Bonding Between Atoms 46

4.1 Why atoms combine 46
4.2 Ionic bonding 47
4.3 Covalent bonding 52
4.4 Coordinate bonding 56
4.5 Ionic and covalent compounds – two extremes 57
4.6 Resonance and delocalization 60
Revision questions 61

5 More About Bonding 63

5.1 Exceptions to the octet rule 63
5.2 Shapes of molecules 65
5.3 Shapes of molecules with multiple bonds 69
5.4 Molecules with and without dipoles 70
5.5 Metallic bonding 72
5.6 Giant molecules 73
5.7 Forces between covalent molecules 75
Revision questions 81

6 Reactions of Ions in Solution 83

6.1 Dissolution of salts in water 83
6.2 Ionic equations 84
6.3 Producing ions in water by chemical reaction 87
6.4 Acids and bases 92
6.5 Reactions of acids 93
6.6 Acids produced when gases CO_2, SO_2 and NO_2 dissolve in water 96
6.7 Reactions of the hydroxide ion 97
6.8 Identification of common gases 99
6.9 Use of reactions in the identification of ions in solution 101
Revision questions 102

7 Oxidation and Reduction 104

7.1 Redox reactions 104
7.2 Oxidation numbers 106
7.3 Oxidizing and reducing agents 107

7.4 Writing and balancing redox equations 108
7.5 Redox couples 110
7.6 Activity series of metals 116
7.7 Corrosion of iron 117
7.8 Redox reactions in nature 118
7.9 Electrolysis 119
Revision questions 121

8 The Mole 122

8.1 Molecular mass 122
8.2 Moles 123
8.3 Percentage composition by mass 128
8.4 Water of crystallization 130
8.5 Calculating amounts from equations 131
8.6 Calculating gas volumes 132
8.7 Limiting reagents 134
8.8 Reactions that do not go to completion 135
Revision questions 137

9 Calculating Concentrations 139

9.1 Concentration of solutions 139
9.2 Standard solutions 142
9.3 Volumetric analysis 144
9.4 Other units of concentration 150
9.5 pH scale 154
Revision questions 155

10 Gases, Liquids and Solids 157

10.1 Energy and temperature 157
10.2 Changes in the state of matter 157
10.3 Gas laws 160
10.4 Kinetic molecular theory of gases 164
10.5 Ideal gas equation 165
10.6 Adsorption of gases on solids 167
10.7 Vapour pressure 168
10.8 Critical temperature and pressure 171
10.9 Phase diagrams 172
10.10 Supercritical fluids 173
Revision questions 176

11 Solutions and Solubility 177

11.1 Solubility 177
11.2 Making drugs more soluble 181
11.3 Dynamic nature of dissolution 183
11.4 Solubility of ionic compounds: the common ion effect 183
11.5 Distribution of a solute between two solvents 184
11.6 Solubility of gases in water 185
11.7 Osmosis 189
11.8 Colloids 190
Revision questions 192

12 Chemical Families 193

12.1 Periodic Table 193
12.2 Group 1 elements 194
12.3 Group 2 elements 197
12.4 Group 14 elements 199
12.5 Group 17 elements 203
12.6 Group 18 elements 204
12.7 Elements of the first transition series 205
12.8 Variation of properties of elements within groups and periods 211
Revision questions 214

13 Energy Changes in Chemical Reactions 216

13.1 Enthalpy and enthalpy changes 216
13.2 Use of Hess's law in calculations 222
13.3 Special kinds of standard enthalpy change 224
13.4 Nutrition 228
13.5 Lattice enthalpy 230
13.6 Bond energetics 233
13.7 Exothermic reactions 236
Revision questions 237

14 Speed of Chemical Reactions 238

14.1 Reaction rate 238
14.2 Factors affecting reaction rate 242
14.3 Reaction rate expressions 246
14.4 Examples of rate expressions found by experiment 248
14.5 Calculations using rate expressions 249
14.6 More about first-order reactions 253
14.7 Reaction mechanisms 256
14.8 Catalysis 258
14.9 Why we do not burst into flames 260
Revision questions 261

15 Chemical Equilibria 263

15.1 Introduction 263
15.2 Equilibrium law and equilibrium constant 265
15.3 Meaning of equilibrium constants 267
15.4 Effects of changing concentration, pressure and temperature upon equilibria 270
15.5 Production of ammonia by the Haber–Bosch process 278
15.6 Heterogeneous equilibria 280
Revision questions 280

16 Gibbs Energy Changes 282

16.1 Spontaneous processes 282
16.2 Entropy 283
16.3 The Gibbs energy change, ΔG 286
16.4 ΔG and spontaneous change 287
16.5 The standard Gibbs energy change of a reaction $\Delta G^{\ominus}$ 289
16.6 $\Delta G^{\ominus}$ as an indicator of spontaneity 290
16.7 $\Delta G^{\ominus}$ and equilibrium constant K 290

16.8 Gibbs energy and stability 295
16.9 Standard electrode potentials, $\Delta G^{\ominus}$ and K 295
16.10 Thermodynamically and kinetically controlled reactions 295
Revision questions 297

17 Acid–Base Equilibria 299

17.1 Ionic equilibria in water 299
17.2 Acids and bases in aqueous solution 303
17.3 Hydrolysis of salts 309
17.4 Buffer solutions 310
17.5 Acid–base indicators 314
17.6 Variation of pH during an acid–base titration 315
17.7 Buffering action of carbon dioxide in water 317
Revision questions 318

18 Organic Chemistry: Hydrocarbons 320

18.1 Alkanes 320
18.2 Alkenes 330
18.3 Alkynes 336
18.4 Aromatic hydrocarbons 337
Revision questions 342

19 Common Classes of Organic Compounds 344

19.1 Halogenoalkanes (or alkyl halides) 345
19.2 Alcohols 345
19.3 Carbonyl compounds 348
19.4 Carboxylic acids 352
19.5 Amines and nitriles 355
19.6 Optical isomerism 357
19.7 Amino acids and proteins 359
19.8 Substituted benzene derivatives 361
Revision questions 364

20 Organic Mechanisms 366

20.1 Mechanisms and types of organic reactions 366
20.2 Key factors in reaction mechanisms 367
20.3 Mechanism of the chlorination of methane 368
20.4 Addition reactions of alkenes 368
20.5 The stability of carbocations 369
20.6 Substitution reactions of benzene 370
20.7 Aromatics 373
20.8 Nucleophilic substitution reactions 374
20.9 Strange molecules in outer space 375
Revision questions 376

21 Separating Mixtures 378

21.1 Separating a solid from a liquid 378
21.2 Separating two liquids 381
21.3 Separating solids 383
21.4 Steam distillation 383
21.5 Ion exchange 384
21.6 Solvent extraction 384
21.7 Chromatography 387
Revision questions 392

22 Spectroscopy 393

22.1 Electromagnetic spectrum 393
22.2 Energy levels of atoms and molecules 396
22.3 Spectrometers 397
22.4 Absorbance and transmittance of a sample 398
22.5 More about ultraviolet and visible spectra 400
22.6 Absorption spectra and colour 404
22.7 Infrared spectroscopy 406
22.8 Beer–Lambert law 412
22.9 Photosynthesis 414
22.10 Nuclear magnetic resonance: ^{1}H-NMR spectroscopy 415
22.11 ^{13}C-NMR spectroscopy 421
Revision questions 424

SPECIAL TOPICS

23 Nuclear and Radiochemistry 427

23.1 Radioactivity 427
23.2 Radionuclides and radioisotopes 429
23.3 More about nuclear radiation 430
23.4 Mathematics of radioactive decay 432
Revision questions 436

24 The Chemistry of Pollution 437

24.1 Pollutants 437
24.2 The depletion of ozone in the stratosphere 438
24.3 Air pollution 439
24.4 Water pollution 443
Revision questions 446

25 Forensic Chemistry 448

25.1 Prerequisites 448
25.2 The scope of forensic chemistry 448
25.3 Variation of the concentration of a poison with time 450
25.4 Calculations using first-order kinetics 450
25.5 The zeroth-order kinetics of ethanol decay 451
25.6 Drinking and driving 452
25.7 Analysis of drugs in hair 453
Revision questions 455

26 Medicinal Chemistry 458

26.1 Medicinal chemistry 458
26.2 Analgesics (painkillers) 460
26.3 Sulfa drugs and antibiotics 461

26.4 Drugs used to treat mental health disorders 464
26.5 Antihypertensives and cholesterol reducing statins 464
26.6 Reducing acidity in the stomach 465
26.7 Chemotherapeutic drugs (anti-cancer drugs) 465
Revision questions 467

27 Fire and Flame 469

27.1 Fire 469
27.2 Flame 470
27.3 The chimney effect 472
27.4 Mechanism of combustion 473
27.5 Energy changes during combustion 475
27.6 Autoignition temperature and flammability limits 475
27.7 The burning of wood 477
27.8 The Davy lamp 479
27.9 The Trench Effect and the King's Cross fire 479
27.10 The toxic twins 480
Revision questions 482

28 Climate change and decarbonization 484

28.1 Introduction 484
28.2 The greenhouse effect 485
28.3 Net zero and decarbonization 488
28.4 Hydrogen as an energy carrier for cars 490
28.5 Decarbonizing industrial processes 490
28.6 Carbon capture and storage 492
Revision questions 493

29 Nanochemistry 494

29.1 What are nanoparticles? 494
29.2 Gold nanoparticles (AuNPs) 496
29.3 Nanoparticles based on carbon 498
29.4 Quantum dots 499
29.5 Biological nanoparticles 500
29.6 Nanoparticles in medicine 500
29.7 Are nanoparticles safe? 502
Revision questions 502

Electronic Structures 503
Answers to Exercises and Revision Questions 505
Glossary 528
Index 535
Valencies of Common Ions 540
