Contents

Preface — V

Chapter 1
Overview and introduction — 1
1.1 Introduction and history: the roots of materials science — **1**
1.2 New materials as the periodic table was formed — **2**
1.3 The materials chemistry explosion, post-Second World War — **5**
1.4 Recycling — **6**
References — **9**

Chapter 2
Basic principles of materials chemistry — 12
2.1 Solid-state materials — **12**
2.1.1 Metals and alloys — **12**
2.1.2 Ceramics and glasses — **14**
2.1.3 Plastics — **16**
2.2 Nonsolid phases of matter — **17**
2.2.1 Ionic liquids — **17**
2.2.2 Ferrofluids — **18**
2.2.3 Novel gases – and their uses — **18**
2.3 Recycling or downcycling — **20**
References — **22**

Chapter 3
Synthetic chemistry — 23
3.1 The search for novel materials — **23**
3.2 Organic synthesis — **24**
3.2.1 Polymers — **25**
3.2.2 Organic synthesis and the carbon–halide bond — **27**
3.2.3 Organic synthesis and the double bond — **28**
3.3 Inorganic syntheses — **29**
3.3.1 Metals — **29**
3.3.2 Ceramics — **32**
3.4 Hard materials – the need by NASA — **34**
3.4.1 Materials critical to the space aerospace industry — **34**
3.4.2 Diamond — **35**
3.4.3 Nitrides and carbides — **36**
References — **36**

Chapter 4
Chemical bonding — 37
4.1 Ionic and molecular bonding — **37**
4.1.1 Ionic nature — **39**
4.1.2 Covalent nature — **39**
4.1.3 The dative bond or coordinate covalent bond — **41**
4.2 Metallic bonding — **42**
4.3 Secondary bonding, intermolecular forces — **46**
4.3.1 Hydrogen bonding — **46**
4.3.2 Dipole interactions — **48**
4.3.3 London forces — **49**
References — **51**

Chapter 5
Structure of matter — 52
5.1 Crystalline solids — **52**
5.2 Unit cells and crystals — **53**
5.3 Packing of particles — **54**
5.4 Holes in crystal structures — **57**
5.5 Amorphous materials — **58**
5.6 Semisolids — **58**
5.7 Crystalline or noncrystalline metallic solids — **59**
5.7.1 Mercury and gallium — **60**
5.7.2 Tin scream — **60**
5.7.3 Metal foams — **60**
5.8 Recycling — **61**
References — **62**

Chapter 6
Molecules — 63
6.1 Introduction — **63**
6.2 Organic molecular materials — **63**
6.2.1 Fully covalent molecules — **63**
6.2.2 The organic–inorganic matter borderline — **65**
6.2.3 Waxes — **66**
6.2.4 Polymers — **67**
6.3 Carbon dioxide — **68**
6.4 Inorganic molecules and compounds — **70**
6.4.1 Sulfur and sulfur crowns — **70**
6.4.2 Sulfuric acid production — **71**
6.4.3 Iodine, I_2 — **72**
6.4.4 Chlorine — **72**

6.4.5 Interhalogen compounds — **73**
6.4.6 Allotropes of phosphorus — **73**
6.4.7 UF_6 — **74**
6.4.8 SF_6 — **74**
6.5 Hybrids, metal-organic frameworks — **75**
6.6 Recycling possibilities — **76**
References — **76**

Chapter 7
Polymers — 78
7.1 Introduction and history — **78**
7.1.1 Nylon – as a replacement for silk — **79**
7.1.2 Synthetic rubber – starting with 1,3-butadiene — **79**
7.1.3 Naugahyde – PVC-coated knit fiber, as artificial leather — **80**
7.1.4 Polytetrafluoroethylene (PTFE) – generally called Teflon — **80**
7.2 Petroleum-based polymers — **81**
7.2.1 Other petroleum-based polymers — **84**
7.2.2 Plasticizers — **85**
7.2.3 Recycling of petroleum-based polymers — **86**
7.3 Renewable and nonpetroleum-based polymers — **87**
7.3.1 Polylactic acid (PLA) — **87**
7.3.2 Polyhydroxyalkanoates (PHAs) — **88**
7.3.3 Silicones — **89**
7.3.4 Recycling, silicon-based polymers — **90**
7.4 Polymer composites — **91**
7.5 Thermoset polymers — **91**
7.6 Thermoplastic polymers — **93**
7.7 Recycling — **93**
References — **94**

Chapter 8
Metals and metallurgy — 96
8.1 Introduction — **96**
8.2 Elemental metals — **96**
8.2.1 Metals from antiquity — **96**
8.2.2 Iron — **98**
8.2.3 Silver — **105**
8.2.4 Gold — **107**
8.2.5 Copper — **114**
8.2.6 Aluminum – Hall–Heroult process — **119**
8.2.7 Titanium – Kroll process — **123**
8.2.8 Platinum group metals or precious metals — **126**

8.3 High-performance element and alloys — **132**
8.3.1 Titanium — **132**
8.3.2 Tungsten — **133**
8.3.3 Magnesium — **133**
8.3.4 Aluminum — **137**
8.4 The discoveries of the 1700s and 1800s — **137**
8.4.1 Lanthanides — **138**
8.5 Ferrous-based alloys — **144**
8.6 Other metal alloys — **144**
8.6.1 Low melting alloys — **145**
8.6.2 Lanthanide-containing alloys and others — **147**
8.7 Novel metal architectures (e.g., foams) — **148**
8.8 Magnetic materials — **148**
8.9 ASTM standards for metals — **150**
8.10 Recycling — **150**
References — **150**

Chapter 9
Defect structures — 154
9.1 Introduction — **154**
9.2 Intrinsic point defects — **155**
9.2.1 Frenkel defects – aka, interstitial defects — **155**
9.2.2 Schottky defects – aka, vacancy defects — **156**
9.3 Extrinsic point defects — **157**
9.4 Extended defects — **159**
References — **160**

Chapter 10
Conductors — 161
10.1 Introduction of metal-based conductors — **161**
10.2 Nonmetal elements and conductivity — **162**
10.3 Organic conductors — **162**
10.3.1 Doped polyacetylene — **164**
10.3.2 Poly(*p*-phenylene vinylene) — **164**
10.3.3 Conductive metal-organic frameworks (MOFs) — **164**
References — **165**

Chapter 11
Semiconductors — 167
11.1 Introduction — **167**
11.2 Silicon — **169**
11.3 Germanium — **170**

11.4 Gallium arsenide — **171**
11.5 Other non-silicon-based semiconductors — **172**
11.5.1 Metal oxide semiconductors — **172**
11.5.2 Semiconducting polymers — **174**
11.6 Recycling — **175**
References — **176**

Chapter 12
Superconductors — 177
12.1 Introduction — **177**
12.2 Known elemental superconductors — **177**
12.3 Temperature correlations — **180**
12.4 Potential superconductors — **182**
12.5 Goals for superconducting materials — **183**
References — **183**

Chapter 13
Biomaterials — 184
13.1 Introduction — **184**
13.2 Materials for medical use — **184**
13.2.1 Bone mimics — **185**
13.2.2 Contact lenses — **185**
13.2.3 Body parts — **186**
13.2.4 Hernia mesh — **187**
13.2.5 Skin grafting and repair — **189**
13.2.6 Silk — **190**
13.3 Mycelium-based end-user items — **191**
13.4 Biofuels — **192**
13.5 Bioplastics — **192**
13.5.1 Polylactic acid — **193**
13.5.2 Polyethylene — **194**
13.5.3 Polyhydroxybutyrate — **194**
13.5.4 Cellulose — **195**
13.5.5 Polycaprolactone — **195**
13.6 Biomaterials for nonmedical applications — **196**
References — **196**

Chapter 14
Ceramics — 197
14.1 Introduction, history, basic compositions — **197**
14.2 Ceramic production and properties — **199**
14.3 Major uses of ceramics — **202**

14.3.1 Roofing tile — **202**
14.3.2 Floor tile — **202**
14.3.3 Wall tiling and facing, brick work — **204**
14.3.4 Tableware and cookware — **204**
14.3.5 Kiln and oven linings — **205**
14.3.6 Ballistic body armor inserts — **206**
14.3.7 Armored vehicle plating and reinforcement — **207**
References — **207**

Chapter 15
Glasses — 208
15.1 Introduction and history — **208**
15.2 Basic compositions — **210**
15.3 Glass blowing and the Pilkington process — **212**
15.4 Optical cabling — **213**
15.5 Bullet-proof glass — **214**
15.6 Additives and optical properties — **215**
15.7 Uses of types of glass — **217**
15.8 Glass recycling — **218**
References — **218**

Chapter 16
Cement and concrete — 220
16.1 Introduction and history — **220**
16.2 Geographic sources — **220**
16.3 Cement formulation chemistry — **222**
16.3.1 Hydraulic cement: reaction chemistry — **222**
16.3.2 Chemistry: nonhydraulic cements — **223**
16.3.3 Cement: other types — **224**
16.4 Cement and concrete: major uses — **226**
16.5 Cement recycling — **226**
References — **227**

Chapter 17
Lightweight materials — 229
17.1 Introduction — **229**
17.2 Basic classifications — **229**
17.2.1 Metal materials — **231**
17.2.2 Ceramic materials — **232**
17.3 Polymers and plastics — **233**
17.4 Recycling — **234**
References — **234**

Chapter 18
Hard materials — 236
18.1 Introduction — **236**
18.2 Basic classifications — **238**
18.2.1 Natural diamond — **239**
18.2.2 Diamond and silicon carbide — **240**
18.2.3 Ceramic materials — **242**
18.2.4 Metal materials, carbides — **242**
18.2.5 Boron nitrides — **242**
18.2.6 Metal borides — **243**
18.3 Recycling — **244**
References — **245**

Index — 247
