Contents

1 **Introduction** 1
Satoshi Murata

2 **From Molecular Robotics to Molecular Cybernetics** 5
Akinori Kuzuya

Part I Molecular Devices to Control Molecular Systems

3 **Functional Expansion of DNA Molecule: Stimulus-Responsive Nucleic Acids** 11
Keiji Murayama, Keiichi Imato, and Yusuke Takezawa

4 **Boosters for DNA Reactions** 23
Naohiko Shimada and Atsushi Maruyama

5 **Design and Application of DNA Origami Actuators** 31
Yuki Suzuki

6 **Expansion of Molecular Systems Function with the Use of Artificial Nucleic Acids** 39
Ken Komiya

Part II Importance of Artificial Membrane Devices in Molecular Robotics

7 **What Are Artificial Membrane Devices in Molecular Robotics?** ... 49
Shin-ichiro M. Nomura

8 **Synthetic DNA Nanopore** 61
En Kawakubo, Towa Higashiho, and Yusuke Sato

9 **Artificial Ion Channel Peptides** 77
Junichi Taira

10 **Probe-Type Artificial Cell Membrane System** 85
Hiroki Koiwa, Hiromu Akai, Shun Okada, and Kan Shoji

11 **Fully Synthetic Transmembrane Channels** 97
Kohei Sato

12 **Protein and Peptide Nanopores** 105
Zugui Peng, Jiajue Ji, Tao Ren, Shoko Fujita, Shoji Iwabuchi, and Ryuji Kawano

Part III Cellular Compartments for Cell-Mimetic Molecular Robots: Giant Vesicles

13 **Nonequilibrium State of Giant Vesicles in a Microfluidic Environment** 119
Taro Toyota, Haruto Obuchi, Yiting Zhang, and Hironori Sugiyama

14 **Preparation of Monodisperse GUVs Using a Microfluidic Device** 125
Mamiko Tsugane and Hiroaki Suzuki

15 **Evaluating Mechanical Properties of Liposomes** 135
Kaoru Uesugi

16 **Microhand and Technology for Manipulating and Measuring Micro-objects** 151
Masaru Kojima

17 **Synthetic Polymers for the Modulation of Membrane Structures and Functions** 161
Kazuma Yasuhara

18 **Membrane Deformation and Transport by Self-Assembling Peptides** 169
Kazunori Matsuura

19 **Transforming Molecular Robots Learned from Living Cells** 177
Masahito Hayashi and Kingo Takiguchi

20 **Control of Topological Defect Generation for Deformation of Molecular Robots** 187
Hiroki Miyazako

21 **Emergent Digital Technologies for Evaluating Giant Vesicles** 195
Taro Toyota, Soichiro Hiroi, Shogo Hamada, Keita Abe, and Akihiko Konagaya

Part IV Intelligent Molecular Computation Systems

22 **DNA Circuits with Memory and Learning Capabilities** 205
Takashi Nakakuki

23 **Development of Artificial Reaction–Diffusion System Toward Chemical Computation for Molecular Cybernetics from Theoretical and Experimental Aspects** 217
Ibuki Kawamata and Keita Abe

24 **Control Theory for Diffusion-Based Molecular Communication Systems** 231
Taishi Kotsuka and Yutaka Hori

25 **Networks of Classical Conditioning Gates** 241
Shun-ichi Azuma

26 **Computation by Collective Behavior of Distributed Elements** 249
Teijiro Isokawa

27 **The Critical Role of Resource Competition in Designing Synthetic Genetic Circuits** 265
Naosato Takagi and Daisuke Kiga

Part V Journalist-in-Residence for Collaborative Engagement Between Journalists and Scientists

28 **Beyond Merely Reporting Science: A Reflection of the Journalist-in-Residence Approach in the "Molecular Cybernetics" Project** 275
Kanako Takae and Mikihito Tanaka

29 **Discussing Emerging Science and Technology Through Science Fiction** 289
Shingo Fujisaki

30 **Applying LARP to Explore ELSI in an Emerging Field of Science, Its Challenges, and Opportunities** 301
Akihiko Mori

31 **A Perspective from the Science Newsroom** 317
Ryoma Komiyama
