Contents

1 Brief Review of Fundamental Concepts of General and Organic Chemistry 1
1.1 Acidity—Basicity ↔ Electrophilicity—Nucleophilicity 1
1.2 Resonance and Tautomerism 2
1.3 Aromaticity and Heterocycles 4
1.4 Configuration—Conformation 6
1.5 Appendix 8
1.6 Questions 8
References 9

Part I Organic Chemical Methods Commonly Used in Biological Research

2 Chemical Properties of "Biomolecules"—A Summary 13
2.1 Amino Acids, Peptides, Proteins 13
2.2 Carbohydrates 17
2.3 Nucleic Acids 20
2.4 Lipids 22
2.5 Heterocyclic Natural Products 24
2.6 Questions 27
References 27

3 Methods for the Synthesis and Analysis of Peptides and Proteins 29
3.1 Synthesis of Peptides 29
3.1.1 Protecting Groups in Peptide Synthesis 30
3.1.2 Formation of the Peptide Bond ("Coupling") 35
3.1.3 Strategies for the Synthesis of Longer Peptides 39
3.1.4 Cleavage of Protecting Groups and Purification 47
3.1.5 Multiple Peptide Syntheses and Production of "Peptide Libraries" 48
3.2 Analysis of Peptides and Proteins 54
3.2.1 Methods for Checking Homogeneity (Purity) 54

3.2.2 Mass Spectrometric Methods 56
3.2.3 Amino Acid Analysis (AAA) 58
3.2.4 Peptide Sequencing by Edman Degradation 60
3.2.5 Analysis of the Structure of Peptides and Proteins 64
3.3 An Illustrative Application Example for SPPS and Edman Degradation 65
3.4 Synthetic Peptides—Current Significance for Medicine and Materials Science 67
3.4.1 Peptides in Drug Research and Production (peptide drugs) 67
3.4.2 Polypeptides in Materials Science 68
3.5 Questions 69
References 69

4 Oligosaccharides (Carbohydrates) 79
4.1 Properties and Significance 79
4.2 Oligosaccharide Syntheses 80
4.2.1 Protecting Groups for the Hydroxyl Functions of Aldoses and Ketoses 81
4.2.2 Formation of the Glycosidic Bond 81
4.2.3 Automated Oligosaccharide Syntheses 84
4.2.4 Appendix 86
4.3 Analysis of Oligosaccharides 86
4.3.1 Composition of Carbohydrates (glycosyl composition) 86
4.3.2 Linkage Analysis 88
4.3.3 Chromatographic and Electrophoretic Methods in Carbohydrate Analysis 89
4.3.4 Mass Spectrometry (MS) 89
4.3.5 NMR Spectroscopy 89
4.3.6 Examples of Other Methods 90
4.3.7 Structural Analysis of Oligosaccharide Chains 90
4.4 Mono-, Oligo- and Polysaccharides 91
4.5 Questions 93
References 93

5 Glycoconjugates, Glycoproteins 99
5.1 Glycolipids 99
5.2 Glycopeptides and Glycoproteins 102
5.2.1 Analysis of Glycoproteins 102
5.2.2 Types of Glycoproteins 103
5.2.3 Synthesis of Glycopeptides and Glycoproteins 104
5.2.4 Biosynthesis of *N*-Glycoproteins 106

5.3 Questions . . . 106
References . . . 108

6 Oligonucleotides and Nucleic Acids . . . 111
6.1 DNA Sequencing . . . 111
6.1.1 Maxam-Gilbert DNA Sequencing . . . 111
6.1.2 Sanger Method . . . 115
6.1.3 Sequencing of Oligonucleotides Newer Sequencing Methods (next-generation sequencing NGS) . . . 115
6.2 Oligonucleotide Syntheses . . . 119
6.2.1 Temporary and Permanent Protecting Groups in Oligonucleotide Synthesis . . . 120
6.2.2 The Phosphoramidite Method . . . 121
6.2.3 The H-Phosphonate Method . . . 125
6.2.4 Synthesis of Cyclic Oligonucleotides . . . 126
6.3 Modified Nucleic Acids . . . 128
6.3.1 Modifications to the Carbohydrate Moiety . . . 128
6.3.2 Peptide Nucleic Acids (PNA) . . . 130
6.3.3 Modifications to the Nucleobases . . . 132
6.3.4 Unnatural Nucleic Acids (XNA) . . . 132
6.4 Questions . . . 133
References . . . 133

7 Preparation of Conjugates . . . 139
7.1 Derivatization of Amino Groups . . . 140
7.1.1 Amide Formation via Activated Esters . . . 140
7.1.2 Thiourea Linkage with Isothiocyanates . . . 142
7.1.3 Other Methods . . . 142
7.2 Derivatization of Thiol Functions (e.g., Cysteine) . . . 142
7.2.1 Preparation of Stable Thioethers . . . 142
7.2.2 Reversible Linkage as Disulfides . . . 144
7.3 Derivatization of Alcohols and Carbonyl Compounds . . . 145
7.3.1 Labeling of Alcohols—Directly or After Transformation . . . 145
7.3.2 Labeling of Aldehydes and Ketones . . . 146
7.4 Selective Coupling of Azides with Terminal Alkynes ("Click" Reaction) . . . 147
7.5 Conjugate Formation via Staudinger Reaction . . . 148
7.6 Conjugation via Activation by UV or Visible Light . . . 150
7.6.1 Photoaffinity Labeling . . . 150
7.6.2 Photochemical Conjugation to Solid Surfaces . . . 153
7.7 Bifunctional Conjugation Reagents . . . 154
7.7.1 Synthetic Applications . . . 154
7.7.2 Analytical Applications (in MS) . . . 157

7.8 Biotin–Avidin (or –Streptavidin), an inseparable pair 157
7.9 Examples and Summary 161
7.9.1 Labeling of Oligosaccharides at Neuraminic Acid (Sialic Acid) 161
7.9.2 Enzymatic Introduction of the Amino Acid Formylglycine (FGly) and Its Possibilities for Conjugate Formation 162
7.9.3 Two examples of Conjugation of Biomolecules to Ligands for Transition Metal Ions 163
7.9.4 Labeling with Fluorocarbon Chains (***Fluorous Tags***) 164
7.9.5 Summary of the Methods 164
7.10 Questions 165
References 165

8 Ligation Methods for the Chemical Synthesis or Semisynthesis of Proteins 169
8.1 Ligation Methods for Protein Synthesis 170
8.1.1 Ligation via Sulfur or Selenium Compounds 170
8.1.2 Ligation to Serine or Threonine as N-terminal Amino Acid 172
8.1.3 Ligation Using Inteins for Protein Semisynthesis 173
8.2 Examples of Synthesized Proteins 173
8.2.1 Synthesis of Alpha-Synuclein 173
8.2.2 Chemoenzymatic Synthesis of Glycoproteins 174
8.3 Questions 177
References 177

Part II Selected Examples of the Application of Organic-Chemical Methods to Biologically Significant Questions

9 Synthesis of Lipopeptides and Protein Conjugates for the Function of the N-Ras Protein 183
9.1 Synthesis of Lipopeptides of the N-Ras Protein 184
9.2 Semisynthesis of Fluorescently Labeled N-Ras Proteins 189
9.3 Pepticinnamin E: A Natural Inhibitor of Ras Farnesyltransferase 192
9.4 Questions 194
References 195

10 Development of Synthetic Peptide-based Vaccines 199
10.1 Brief Immunological Introduction 199
10.2 Malaria 200
10.2.1 Plasmodium Falciparum—The Causative Agent of Malaria 200

10.2.2 Synthetic Peptide-Based Vaccines 202
10.3 Vaccines Against the Circumsporozoite Protein (CSP) 202
10.3.1 A Fully Synthetic Vaccine Based on Dendrimers 202
10.3.2 Approved CSP-Based Vaccines 205
10.4 Peptide-based Vaccines Against Merozoites 206
10.4.1 Merozoite Proteins and Their Function 206
10.4.2 Mechanisms of Immune Evasion by Merozoites 207
10.4.3 The Attempt to Make Conserved Essential Regions of Merozoite Proteins Immunogenic 207
10.5 Methods for Determining the Immunoreactivity of Antisera and Antibodies 209
10.6 Therapeutics against Malaria 212
10.7 Questions 214
References 214

11 Applications of Modified Oligonucleotides 217
11.1 Targeted Modifications of Nucleobases for a Better Understanding of the DNA Double Helix According to the Watson and Crick Model 218
11.2 Detection of RNA (and DNA) Using Specially Modified Oligonucleotides (*Molecular Beacons* and Others) 222
11.2.1 Hybridization with Fluorescent Reagents 222
11.2.2 Template-Guided Reaction Activates Fluorophore 224
11.2.3 Template-Guided De Novo Fluorophore Synthesis as a Method for DNA Detection [16] 229
11.3 Modified Oligonucleotides for Studying Radicals in DNA 231
11.4 Questions 234
References 235

12 Methods for the Modification of Proteins—Introduction of Non-natural Amino Acids 239
12.1 Incorporation of Unnatural Amino Acids via an In Vitro Protein Biosynthesis System 240
12.1.1 Principle of the Method 240
12.1.2 An Early Application Example: Modification of a Ras Protein 241
12.1.3 Further Examples of In Vitro Expression of Modified Proteins 243
12.2 Targeted Incorporation of Non-Natural Amino Acids Into Proteins by In Vivo-Expression 245
12.2.1 Principle of the Method 245
12.2.2 Incorporation of an Amino Acid for Targeted Photochemical Crosslinking (*Photo-Crosslinking*) 246

12.2.3 Incorporation of a Serine Analogue With Reversibly Blocked Hydroxyl Function to Control Protein Phosphorylation 249
12.2.4 Specific Introduction of Posttranslational Modifications at Lysine 250
12.3 Further Developments in Expression of Specifically Modified Proteins 251
12.4 Questions 252
References 252

13 Optimization of Structure-activity Relationships (SAR): Development of Inhibitors and Agonists 255
13.1 From Peptide to Peptidomimetic: Aliskiren, the First Approved Renin Inhibitor 256
13.1.1 Antihypertensive Agents 256
13.1.2 Development of an Inhibitor 256
13.1.3 Structure-Based Design of the First Renin Inhibitor 260
13.1.4 Clinical Experience with the Renin Inhibitor 260
13.1.5 On the Synthesis of Aliskiren 261
13.2 Sweet Taste and Sweeteners—The Receptor and Its Agonists 266
13.2.1 Taste—One of the Five Senses in Humans and Animals 266
13.2.2 Structures of Sweet-Tasting Substances—A Bewildering Diversity 267
13.2.3 Structural Theories for Sweeteners 269
13.2.4 Bitter or Sweet—Often Just a Matter of (S)- or (R)-Configuration 270
13.2.5 Discovery and Function of the Receptors 272
13.2.6 Sweeteners as a Remedy Against a Looming Increase in Obesity? 275
13.3 Questions 275
References 276

14 Fluorescent Compounds 281
14.1 Fluorophores and Fluorescence 281
14.1.1 Fluorescence—Some Important Terms 282
14.1.2 Fluorophore Types: Photophysical Properties, Synthesis Notes, and Applications 284
14.1.3 Natural Fluorescent Proteins 288
References 291

15 Solutions 297
15.1 Solutions Chap. 1 297
15.2 Solutions Chap. 2 298
15.3 Solutions Chap. 3 298
15.4 Solutions Chap. 4 300
15.5 Solutions Chap. 5 301
15.6 Solutions Chap. 6 301
15.7 Solutions Chap. 7 302
15.8 Solutions Chap. 8 303
15.9 Solutions Chap. 9 304
15.10 Solutions Chap. 10 305
15.11 Solutions Chap. 11 306
15.12 Solutions Chap. 12 307
15.13 Solutions Chap. 13 308
