Contents

1 Introduction 1
1.1 Objectives 1
1.2 Upstream Processes 4
1.3 Energy Density of On-Board Energy Carriers 9
1.4 Pathways to Better Fuel Economy 11

2 Vehicle Energy and Fuel Consumption – Basic Concepts ... 13
2.1 Vehicle Energy Losses and Performance Analysis 13
2.1.1 Energy Losses 13
2.1.2 Performance and Drivability 18
2.1.3 Vehicle Operating Modes 20
2.2 Energy Demand in Driving Cycles 21
2.2.1 Test Cycles 21
2.2.2 Mechanical Energy Demand 22
2.2.3 Some Remarks on the Energy Consumption 27
2.3 Methods and Tools 31
2.3.1 Average Operating Point Approach 31
2.3.2 Quasistatic Approach 32
2.3.3 Dynamic Approach 36
2.3.4 Optimization Problems 37
2.3.5 Software Tools 38

3 IC-Engine-Based Propulsion Systems 41
3.1 IC Engine Models 41
3.1.1 Introduction 41
3.1.2 Normalized Engine Variables 42
3.1.3 Engine Efficiency Representation 43
3.2 Gear-Box Models 45
3.2.1 Introduction 45
3.2.2 Selection of Gear Ratios 45
3.2.3 Gear-Box Efficiency 47
3.2.4 Losses in Friction Clutches and Torque Converters 49

3.3 Fuel Consumption of IC Engine Power Trains 52
3.3.1 Introduction 52
3.3.2 Average Operating Point Method 52
3.3.3 Quasistatic Method 54

4 Models of Electric and Hybrid-Electric Propulsion Systems 57
4.1 Electric Propulsion Systems 57
4.2 Hybrid-Electric Propulsion Systems 58
4.2.1 System Configurations 59
4.2.2 Power Flow 62
4.2.3 Concepts Realized 67
4.2.4 Modeling of Hybrid Vehicles 67
4.3 Electric Motors 68
4.3.1 Quasistatic Modeling of Electric Motors 72
4.3.2 Dynamic Modeling of Electric Motors 87
4.4 Modeling of Generators 89
4.5 Batteries 89
4.5.1 Quasistatic Modeling of Batteries 92
4.5.2 Dynamic Modeling of Batteries 101
4.6 Supercapacitors 105
4.6.1 Quasistatic Modeling of Supercapacitors 106
4.6.2 Dynamic Modeling of Supercapacitors 109
4.7 Electric Power Links 110
4.7.1 Quasistatic Modeling of Electric Power Links 111
4.7.2 Dynamic Modeling of Electric Power Links 112
4.8 Torque Couplers 113
4.8.1 Quasistatic Modeling of Torque Couplers 114
4.8.2 Dynamic Modeling of Torque Couplers 115
4.9 Planetary Gear Sets 116
4.9.1 Quasistatic Modeling of Planetary Gear Sets 116
4.9.2 Dynamic Modeling of Planetary Gear Sets 119

5 Models of Hybrid-Inertial and Hybrid-Hydraulic Propulsion Systems 121
5.1 Short-Term Storage Systems 121
5.2 Flywheels 124
5.2.1 Quasistatic Modeling of Flywheel Accumulators 127
5.2.2 Dynamic Modeling of Flywheel Accumulators 130
5.3 Continuously Variable Transmissions 130
5.3.1 Quasistatic Modeling of CVTs 131
5.3.2 Dynamic Modeling of CVTs 134
5.4 Hydraulic Accumulators 135
5.4.1 Quasistatic Modeling of Hydraulic Accumulators 136
5.4.2 Dynamic Modeling of Hydraulic Accumulators 142

5.5 Hydraulic Pumps/Motors 143
5.5.1 Quasistatic Modeling of Hydraulic Pumps/Motors 144
5.5.2 Dynamic Modeling of Hydraulic Pumps/Motors 146

6 Models of Fuel-Cell Propulsion Systems 147
6.1 Fuel-Cell Electric Vehicles and Fuel-Cell Hybrid Vehicles 147
6.1.1 Concepts Realized 149
6.2 Fuel Cells 149
6.2.1 Quasistatic Modeling of Fuel Cells 161
6.2.2 Dynamic Modeling of Fuel Cells 175
6.3 Reformers 180
6.3.1 Quasistatic Modeling of Fuel Reformers 183
6.3.2 Dynamic Modeling of Fuel Reformers 187

7 Supervisory Control Algorithms 189
7.1 Introduction 189
7.2 Heuristic Control Strategies 190
7.3 Optimal Control Strategies 192
7.4 Sub-Optimal Control Strategies 196
7.4.1 Equivalence Factors 197
7.4.2 Equivalent Consumption Minimization Strategy 199
7.4.3 T-ECMS 201

8 Appendix I – Case Studies 205
8.1 Case Study 1: Gear Ratio Optimization 205
8.1.1 Introduction 205
8.1.2 Software Structure 205
8.1.3 Results 207
8.2 Case Study 2: IC Engine and Flywheel Powertrain 209
8.2.1 Introduction 209
8.2.2 Modeling and Experimental Validation 211
8.2.3 Numerical Optimization 212
8.2.4 Results 214
8.3 Case Study 3: Supervisory Control Strategies for a Parallel HEV 216
8.3.1 Introduction 216
8.3.2 Modeling and Experimental Validation 216
8.3.3 Control Strategies 217
8.3.4 Results 219
8.4 Case Study 4: Optimal Rendez-Vous Maneuvers 225
8.4.1 Modeling and Problem Formulation 226
8.4.2 Optimal Control for the Case of a Specified Final Distance 228
8.4.3 Optimal Control for the Case of an Unspecified Final Distance 232

8.5 Case Study 5: Fuel Optimal Trajectories of a Racing FCEV . . . 236
8.5.1 Modeling . . . 237
8.5.2 Optimal Control . . . 241
8.5.3 Results . . . 243
8.6 Case Study 6: Nonpredictive Optimal Control of a Series Hybrid Bus . . . 246
8.6.1 Modeling and Validation . . . 246
8.6.2 Optimal Control . . . 249
8.6.3 Results . . . 253

9 Appendix II – Optimal Control Theory . . . 257
9.1 Parameter Optimization Problems . . . 257
9.1.1 Problems Without Constraints . . . 257
9.1.2 Numerical Solution . . . 259
9.1.3 Minimization with Equality Constraints . . . 261
9.1.4 Minimization with Inequality Constraints . . . 264
9.2 Optimal Control . . . 266
9.2.1 Introduction . . . 266
9.2.2 Optimal Control for the Basic Problem . . . 266
9.2.3 First Integral of the Hamiltonian . . . 270
9.2.4 Optimal Control with Specified Final State . . . 272
9.2.5 Optimal Control with Unspecified Final Time . . . 273
9.2.6 Optimal Control with Restrictions of the Control Variable . . . 273

References . . . 279
