About the author *xv*
Notation *xvi*
Preface *xviii*

PART I
Background 1

1 Calculus background 3

Overview 3
1.1 Limits 3
1.2 Continuity 6
1.3 Differentiation 6
1.4 Rules for differentiation 8
1.5 Higher-order derivatives 10
1.6 Partial derivatives 11
1.7 Higher-order partial derivatives 12
1.8 Total differential 13
1.9 Geometric series 15
1.10 Taylor expansion 16
1.11 Variation 17
1.12 Integration 19
1.13 The fundamental theorem of calculus 20
1.14 Rules of integration 21
1.15 Double integrals 26
1.16 Solving first-order differential equations 30
1.17 Summary 33
Further reading 33
Notes 34

2 Statistical background 35

Overview 35
2.1 Discrete random variables 35
2.2 Continuous random variables 37
2.3 Moments of random variables 37
2.4 Multivariate distributions 38
2.5 Conditional probability 40
2.6 Examples of probability distributions 42
2.6.1 Binomial distribution 42
2.6.2 Poisson distribution 43
2.6.3 Uniform distribution 43
2.6.4 Normal distribution 44
2.7 Moment-generating functions 47
2.8 Convergence of random variables 50
2.9 Summary 53
Further reading 53
Notes 53

3 Introduction to derivative securities 55

Overview 55
3.1 Terminology 55
3.2 Factors affecting equity option prices 57
3.2.1 Current share price, S_t 58
3.2.2 Strike price, K 58
3.2.3 Expiration date, T 58
3.2.4 Volatility, σ 58
3.2.5 Risk-free rate, r 58
3.2.6 Dividend rate, q 59
3.3 Pricing European options 59
3.4 Efficient markets 62
3.5 Arbitrage 63
3.6 Pricing forward contracts 64
3.7 Put-call parity 68
3.8 Early exercise of non-dividend paying American call 70
3.9 Summary 70
Key things to remember 71
Further reading 71
Notes 71
Questions 72

PART II
Stochastic calculus 79

4 Standard Brownian motion 81

Introduction 81
4.1 Definition 81
4.2 Non-differentiability of standard Brownian motion 85
4.3 Filtrations 87
4.4 The martingale property 88
4.5 Simulation 93
4.6 Summary 94
Key things to remember 94
Further reading 94
Notes 95
Questions 96

5 Itô formula 104

Introduction 104
5.1 Itô's formula for Brownian motion 104
5.2 Formula for Itô processes 106
5.3 Itô formula in two variables 108
5.4 Summary 112
Key things to remember 112
Further reading 112
Notes 113
Questions 114

6 Stochastic integrals 120

Introduction 120
6.1 Stochastic integral 120
6.2 Basic rules for stochastic integration 122
6.3 Variation 122
6.4 Itô formula in integral form 126
6.5 Integral form of Itô processes 128
6.6 Statistical properties of the solution 131

6.6.1 Statistical properties of Itô integral 132
6.6.2 Statistical properties of solutions to Itô processes 135
6.6.3 Statistical properties without finding solution 136
6.6.4 Differential form and the martingale property 139
6.7 Simulation 141
6.7.1 Arithmetic Brownian motion 141
6.7.2 Geometric Brownian motion 143
6.7.3 Ornstein-Uhlenbeck process 145
6.8 Summary 146
Key things to remember 147
Further reading 147
Notes 147
Questions 148

PART III
Pricing derivatives 163

7 Geometric Brownian motion 165

Introduction 165
7.1 Working with the lognormal model 165
7.2 Statistical properties 167
7.3 Parameter estimation and simulation 170
7.4 Limitations of geometric Brownian motion 173
7.4.1 Normal returns 173
7.4.2 Independent returns 174
7.4.3 Time-invariant parameters 175
7.5 Summary 177
Key things to remember 177
Further reading 177
Notes 177
Questions 178

8 The binomial model 186

Introduction 186
8.1 Basic model 186
8.2 Two-period binomial model 191
8.3 n-period binomial model 194
8.4 Recombining binomial trees 195
8.5 Calibrating binomial models 196
8.6 Radon-Nikodým derivative 198

8.7 Summary 200
Key things to remember 201
Further reading 201
8.8 Coding in R 201
Questions 204
Appendix 212
A.1 Continuous-time limit of binomial model 212

9 Black–Scholes equation 214

Introduction 214
9.1 Self-financing portfolios 215
9.2 Black–Scholes equation 216
9.3 Extensions of the Black–Scholes equation 220
9.3.1 Continuous dividend stream 220
9.3.2 Storage costs 221
9.4 Solving the Black–Scholes equation 222
9.5 The Black–Scholes formula 223
9.6 Summary 224
Key things to remember 225
Further reading 225
Notes 225
Questions 226

10 Option pricing in continuous time 233

Introduction 233
10.1 Martingale representation theorem 234
10.2 Change of probability measure 235
10.3 The theorem of Girsanov 237
10.4 Risk-neutral derivative pricing formula 242
10.5 Applying the risk-neutral pricing formula 244
10.6 European call and put options 246
10.7 Extensions of the risk-neutral derivative pricing formula 248
10.8 Summary 251
Key things to remember 252
Further reading 253
Notes 253
Questions 254

11 Option Greeks 262

Overview 262
Introduction 262
11.1 Delta hedging 263
11.2 Gamma hedging 265
11.3 Time effects 267
11.3.1 Interest 268
11.3.2 Theta 271
11.4 Vega 272
11.5 Greeks for European calls and puts 273
11.6 Summary 276
Key things to remember 276
Further reading 276
Questions 278

PART IV
Interest rate derivatives 287

12 Fixed-income instruments 289

Introduction 289
12.1 Zero-coupon bonds 289
12.2 Definitions 290
12.3 Coupon bonds 292
12.4 Reference rates 293
12.5 Interest rate swaps 294
12.5.1 Mechanics of swaps 294
12.5.2 Calculating the swap rate 296
12.6 Term structure 297
12.6.1 Yield curve shapes 298
12.6.2 Yield curve changes 299
12.7 Summary 302
Key things to remember 302
Further reading 302
Notes 302
Questions 303

13 Black's model 310

Introduction 310
13.1 Black's model 310
13.2 Bond options 311
13.3 Interest rate caps and floors 313
13.4 Swaptions 315
13.5 Intuition behind Black's model 318
13.5.1 Option on a bond 319
13.5.2 Caplet 320
13.5.3 Swaption 321
13.6 Inconsistency of Black's model 322
13.7 Black's model and implied volatilities 323
13.8 Summary 324
Key things to remember 324
Further reading 325
Note 325
Questions 326
Appendix 331
A.1 Lognormal result 331

14 Short-rate models 332

Introduction 332
14.1 Pricing a zero-coupon bond 332
14.2 Vasicek model 336
14.2.1 Zero-coupon bond price 337
14.2.2 Yield curve 338
14.2.3 Volatility 339
14.3 Affine term-structure models 340
14.4 Cox–Ingersoll–Ross model 340
14.5 Estimating parameters 343
14.5.1 Real-world estimates: Euler–Maruyama discretization 343
14.5.2 Real-world estimates: Maximum Likelihood 345
14.5.3 Risk neutral estimates 347
14.6 Hull-White model 350
14.7 Duration and convexity 353
14.8 Option on a zero-coupon bond 353

14.9 Option on a coupon bond 356
14.10 Caps/floors and swaptions 357
14.11 Multi-factor models 358
14.12 Summary 359
Key things to remember 360
Further reading 360
Notes 360
Questions 361
Appendix 386
A.1 Calculus result 386
A.2 Derivation of CIR zero-coupon bond price 386
A.3 Calibration in Hull-White model 388
A.4 $P_{t,T}$ lognormally distributed under the T-forward measure 390

15 Heath–Jarrow–Morton model 391

Introduction 391
15.1 Heath, Jarrow and Morton model 391
15.2 Brace, Gatarek and Musiela (BGM) model 397
15.2.1 From Heath – Jarrow—Morton to the Brace—Gatarek—Musiela model 398
15.2.2 Pricing power call options 402
15.2.3 Calibrating forward rate volatilities 404
15.2.4 Monte Carlo simulation 405
15.3 Summary 408
Key things to remember 409
Further reading 409
Notes 409
Questions 410
