Contents

Preface **ix**

How to use this book **xvii**

1 Preliminaries **1**
1.1 Sets and Functions 2
1.2 Matrices 6
1.3 Linear Algebra 9
Exercises 16
1.4 Euclidean and Unitary spaces 18
Exercises 25
1.5 Eigenvalues and Semisimple Matrices 28

2 Linear Spaces: New Spaces for Old **37**
2.1 Duality 39
Exercises 47
2.2 Multilinear Functions 51
2.3 More about tensor products 61
Exercises 66

3 Normed Linear Spaces, Metric Spaces **68**
3.1 Convergence and Continuity 69
Exercises 90
3.2 Open sets and Compact sets 93
Exercises 103
3.3 Norms on Spaces of Linear Maps 106
Exercises 116
3.4 Infinite Series 118
Exercises 124
3.5 Connectedness and Density 124
Exercises 131

4 Calculus **134**
4.1 Differentiation and Derivatives 136
Primitives and Integrals 156
Exercises 162
4.2 The Mean-Value Theorem 167
Exercises 176
4.3 Higher Derivatives 179
Exercises 191
4.4 Tangent Vectors and all that 191
Generalized coordinates 203

5 Existence Theorems **209**
5.1 The Contraction Mapping Principle 210
Exercises 212
5.2 Ordinary Differential Equations 212
5.3 The Inverse Function Theorem 223
The Fundamental Theorem of Algebra 227
5.4 The Implicit Function Theorem 230

6 Applications: Stationary values **239**
6.1 Lagrange's Theorem 240
6.1.1 Applications of Lagrange's Theorem 248
Exercises 251
6.2 The Calculus of Variations 252
6.2.1 Applications of the Euler–Lagrange equations . . . 257
Isoperimetric Problems 264
Exercises 266

Appendix: Green's Theorem **268**

References **273**

Index **275**
