Contents

1 Basic Bayesian Probabilities 1
1.1 A Historical Perspective 1
1.2 Probabilities 6
1.3 Representing a Probability Space in R 15
1.4 Independent Events and Bayes' Formula 33
1.5 Representation of Product Spaces 36
1.6 Random Variables 48
1.7 The Exponential Family 63
Classical Discrete Distributions of the Exponential Family 65
Classical Continuous Distributions 66
1.8 Distributions That Are Not in the Exponential Family 69
1.9 Random Vectors 71
1.10 Independent Random Variables 99
1.11 Central Limit and Levy's Theorem 104
1.12 Exchangeability 107
1.13 Stochastic Processes 124
References 127

2 Beliefs 133
2.1 Beliefs 133
2.2 Working with Beliefs in R 139
2.3 Commonality 149
2.4 Retrieving Mass Functions from Other Representations 151
2.5 Couples, Product Frames, and Marginality 156
2.6 Contour Functions 174
2.7 Combination of Beliefs 180
2.8 Conditional Beliefs, Plausibilities, and Frames 191
2.9 Connections Between Probabilities and Beliefs 196
References 198

3 Information and Entropy 203
3.1 Entropy 204
3.2 Joint and Conditional Entropy 228
3.3 Mutual Information and Relative Entropy 236
3.4 Surprise Quantification 250
References 259

4 Maximum Entropy 265
4.1 The Principle of Maximum Entropy 265
4.2 Karhunen-Loève Expansions for the Numerical Generation of Stochastic Processes 282
4.3 Numerical Construction of Karhunen-Loève Expansions 291
References 313

5 Bayesian Inference 321
5.1 Bayesian Estimation 321
5.2 Jeffreys' Priors 331
5.3 Using UQ in Bayesian Estimation 340
5.4 Bayesian Regression 366
5.5 Model Selection and Hypothesis Testing 375
5.6 The Expectation-Maximization Algorithm 391
References 402

6 Sequential Bayesian Estimation 413
6.1 Monte-Carlo Approach 414
6.2 Metropolis-Hastings Algorithm 422
6.3 Kalman Filtering 429
6.4 Particle Filtering 441
6.5 Determination of the Distribution of the Noise 447
6.6 Bayesian Optimization 459
References 468
