

CONTENT

Introduction	3
Literature	5
Semicontinuous and continuous biosynthesis of antibiotics	5
Comparison of batch and continuous cultivation from the economical standpoint	10
Methods	13
A. Production strain and its maintenance	13
B. Nutrient media	14
C. Fermentation equipment	15
D. Analytical methods	19
E. Symbols used	20
Experimental results	21
Growth of <i>Streptomyces aureofaciens</i> in continuous culture in the synthetic medium	21
Growth in batch culture	21
Growth in continuous culture	23
The biosynthesis of chlortetracycline and pigments in continuous culture of <i>Streptomyces aureofaciens</i>	29
Elimination of direct influence of low sucrose concentration or of the influence of some inhibiting substance	30
Verification of a genetic change in population	31
Study of pigment production	33
Continuous biosynthesis of chlortetracycline on media used in industrial production	35
Batch experiments	36
Continuous fermentation experiments	37
Discussion	47
Comparison of behaviour of filamentous with non-filamentous organisms in continuous culture	47
Production of chlortetracycline and pigments in continuous culture of <i>Streptomyces aureofaciens</i>	49
Continuous biosynthesis of chlortetracycline on media used in industrial production	51
Conclusion	55
