Papers

| | |
|---|----|
| O. Bábek, K. Hron, T. M. Grygar, M. Faméra, T. Nováková, J. Sedláček and K. Fačevicová <i>Logratio approach to geochemical background definition in moderately polluted river sediments: River Morava, Czech Republic</i> | 14 |
| S. Bělašková and E. Fišerová <i>The unemployment study in terms of survival analysis</i> | 17 |
| K. G. van den Boogaart and R. Tolosana-Delgado <i>The challenges of regional geochemistry to compositional data analysis from a methodological viewpoint</i> | 20 |
| A. Buccianti, B. Nisi and B. Raco <i>Compositional background for groundwater chemistry: the experience of the Geobasi project, Tuscany region (central Italy)</i> | 22 |
| E. F. J. de Mulder and A. Obdam <i>Why should geoscientists apply Compositional Data Analysis?</i> | 27 |
| J. J. Egozcue, V. Pawlowsky-Glahn, R. A. Olea and E. Pardo-Igúzquiza <i>Consistency issues in mapping compositional data in original units</i> | 31 |

| | |
|--|----|
| K. J. Ellefsen and D. B. Smith <i>Quantifying uncertainty in maps of element concentrations</i> | 35 |
| K. Fačevicová and P. Kynčlová <i>Time series of compositional tables</i> | 37 |
| E. C. Grunsky <i>The use of geochemical survey data for predictive geologic mapping at regional and continental scales</i> | 40 |
| J. A. Hodgson, K. Knights, S. Carey and R. Scanlon <i>The application of geochemical analysis technique's to regional geophysical radiometric data and its comparison with equivalent regional geochemistry data</i> | 44 |
| K. Hrůzová, K. Hron and V. Todorov <i>Classical and robust regression among parts of compositional data</i> | 46 |
| A. Jones, E. Carraway, C. Marion and M. Scott <i>Metals concentrations in South Carolina, United States streams: statewide, ecoregion, and ecobasin relationships to land cover</i> | 49 |
| A. Kalivodová, K. Hron, M. Templ and P. Filzmoser <i>Replacement of rounded zeros in high-dimensional compositional data with application to metabolomics</i> | 52 |
| V. Kopačková, L. Koucká and J. Jelének <i>Mineral mapping using QUANTools: Image spectroscopy approach</i> | 55 |
| P. Kynčlová, P. Filzmoser and K. Hron <i>Compositional biplots with external non-compositional variables</i> | 58 |
| J. McKinley, U. Ofterdinger and S. Palmer <i>Investigating potentially harmful trace elements in soils and their bioaccessibility: a compositional data analysis approach</i> | 62 |

| | |
|---|----|
| D. Mlčůchová | |
| <i>Using the beta regression for modelling the percentage of damage of woods</i> | 66 |
| C. Reimann, P. Filzmoser and K. Hron | |
| <i>Geochemical mapping and CoDa: Problems and Possibilities</i> | 69 |
| H. Reitner, P. Filzmoser and H. Pirkl | |
| <i>Subject to Change: A log-ratio approach to the geochemistry of stream sediment samples</i> | 72 |
| M. Rypka | |
| <i>Composition of export</i> | 75 |
| B. Walczak | |
| <i>Can CODA conquer analytical chemistry?</i> | 78 |
| Z. Ziembik, A. Dolhańczuk-Śródka and G. Kusza | |
| <i>Subject to Change: A log-ratio approach to the geochemistry of stream sediment samples</i> | 79 |
| R. Zůvala and E. Fišerová | |
| <i>Modeling landslide in Halenkovice using the kriging method</i> | 84 |
