

Table of contents

1	The Application of the MATLAB and COMSOL Programs for the Computation of a 3D Non-stationary Electric Field.....	8
1.1	INTRODUCTION.....	8
1.2	Continuous mathematical model	9
1.3	Illustrative example	9
1.4	Results obtained from program MATLAB	12
1.5	Results obtained from program COMSOL version 3.4.....	14
1.6	CONCLUSION	16
2	Possibilities of black-start with using renewable energy resources.....	17
2.1	INTRODUCTION.....	17
2.2	Modeled system.....	18
2.2.1	Wind speed course.....	18
2.2.2	Self-consumption model.....	19
2.3	Simulation calculations	20
2.4	Preconditions of a Successful Black-Start.....	23
2.4.1	Black-start	24
2.4.2	Maintaining constant frequency and power balance	24
2.5	CONCLUSION	24
3	Negative influences on shielding effectiveness.....	25
3.1	INTRODUCTION.....	25
3.2	Shielding effectiveness (SE).....	25
3.3	Measuring of shielding effectiveness	26
3.3.1	Measuring with ETS-Lindgren antenna set.....	26
3.3.2	Measuring with immunity test system.....	27
3.4	Negative influences on shielding effectiveness.....	28
3.4.1	Apertures	28
3.4.2	Cavity resonance	30

3.5	CONCLUSIONS	30
4	The electrical radiant panels and Radiant Floor Heating	32
4.1	INTRODUCTION	32
4.1.1	Radiant Heating	32
4.1.2	Radiant Panels	33
4.1.3	Radiant Floor Heating	34
4.2	Types of Radiant Floor Heat	35
4.2.1	Air-Heated Radiant Floors	35
4.2.2	Ceramic tile, wood and other floor coverings	36
4.2.3	Electric radiant floors	36
4.3	CONCLUSIONS.....	36
5	Example of use of dynast program – Simulation of electrical lines with distributed parameters	37
5.1	INTRODUCTION.....	37
5.2	Simulation of line in the dynast program	38
5.2.1	Structure model of line	38
5.2.2	Models of electrical lines in the Dynast program.....	38
5.2.3	The line with the lumped parameters	40
5.2.4	Line with the distributed parameters	41
5.3	<i>Impulse phenomenon on the lines</i>	43
5.4	CONCLUSIONS	45
6	Fire of photovoltaic panels mounted on buildings and roofs	46
6.1	INTRODUCTION.....	46
6.2	Dangers for acting fire units	47
6.3	Fire rating and fire performance.....	47
6.4	Ways of extinguishing.....	48
6.5	Secondary hazards of photovoltaic system.....	48
6.6	Progress of fire in building with PV system.....	49
6.7	CONCLUSIONS	50

7	Research of thin films used in pv cells 2 nd and 3 rd generation.....	51
7.1	INTRODUCTION to thin-film photovoltaic.....	51
7.2	Experimental methods.....	52
7.2.1	X-Ray Diffraction.....	53
7.3	Results	54
7.4	CONCLUSIONS	56
8	Possibilities of the connection of photovoltaic power plants in the low-voltage network	57
8.1	INTRODUCTION.....	57
8.2	Facts and technical description.....	57
8.2.1	Problem definition.....	58
8.2.2	Tested model	60
8.2.3	Simulation results	60
8.3	CONCLUSIONS	62
9	Induction Crucible Furnace With Supplementary Construction Element – simulation in rillfem 2D software.....	63
9.1	INTRODUCTION.....	63
9.2	Computer simulation of the electromagnetic field distribution around the crucible induction furnace	63
9.2.1	Problem definition.....	63
9.2.2	Basic theory of the induction heating problem.....	65
9.2.3	Simulation results	66
9.3	CONCLUSIONS	68
10	Simulation of Voltage Control of Distribution Networks with Photovoltaic Power plants	69
10.1	INTRODUCTION.....	69
10.2	Modelling of LTC transformers in the Gauss-seidel method.....	70
10.3	Modelling of Photovoltaic Power plants	71
10.4	Case study - preparing the input data	77
10.5	Case study - Simulations and Results.....	81

10.6	CONCLUSIONS.....	89
11	LIST OF LITERATURE.....	90
12	LIST OF AUTHORS.....	93
13	REGISTER.....	95
