

Table of contents

1	The Thermal radiation as an effective source of heat to achieve thermal comfort	8
1.1	INTRODUCTION	8
1.2	Thermal comfort	8
1.2.1	Importance of thermal comfort	8
1.2.2	Factors determining thermal comfort	9
1.2.3	Thermal sensitivity of individuals	9
1.2.4	Gender differences	9
1.2.5	Models of thermal comfort	10
1.3	The measurement	10
1.4	CONCLUSION	13
2	Magnetic Heating of billets	14
2.1	INTRODUCTION	14
2.2	History and advantages of magnetic heating	14
2.3	Conventional induction heating (AC heating)	15
2.4	DC Magnetic heating	15
2.5	Magnetic heating advantages	16
2.5.1	Low frequencies	16
2.5.2	Wide material range	16
2.5.3	Temperature tapers	16
2.5.4	Low maintenance requirements	17
2.5.5	Reliability	17
2.6	Experience from westerlau	17
2.7	CONCLUSION	18
3	Perspective generator circuit breaker	19
3.1	INTRODUCTION	19
3.2	Generator circuit breaker	20

3.2.1	Generator circuit breaker performance capabilities.....	21
3.2.2	Generator circuit breaker performance capabilities – current conditions	21
3.2.3	Generator circuit breaker performance capabilities – voltage conditions	22
3.2.4	Generator circuit breaker performance capabilities – reliability	23
3.3	CONCLUSIONS	24
4	Influence of electrode setting to main insulation $\text{tg}\delta$ measurement of turbogenerator bars.....	25
4.1	INTRODUCTION.....	25
4.2	Power loss factor $\text{tg}\delta$ and its measuring	25
4.3	influence of measuring electrode on the power loss factor level.....	27
4.4	CONCLUSIONS	29
5	Optimalization of connection the secondary winding of the auxiliary normal transformer in the nuclear power plant.....	30
5.1	INTRODUCTION.....	30
5.2	Description of the auxiliary normal and standby transformers in the ETE1,2.....	30
5.3	The Proposed solution	32
5.4	CONCLUSIONS	33
6	AMR/AMI – automatic meter reading & advanced metering infrastructure ...	34
6.1	INTRODUCTION.....	34
6.2	The principle of the AMR	35
6.3	AMI and system synergy.....	36
6.3.1	IEEE 802.15.4 and ZigBee	36
6.3.2	Development in Europe.....	37
6.3.3	Smart Utility Network (SUN)	37
6.4	CONCLUSIONS	38
7	Stability algorithms for Newton-Raphson method in load flow analysis.....	39
7.1	INTRODUCTION.....	39

7.2	Numerical instability of the Newton-Raphson method	40
7.3	Stability algorithms for Newton-Raphson method	41
7.3.1	Start Point Estimation Methods	41
7.3.2	State Update Methods	41
7.4	Numerical results	43
7.5	CONCLUSIONS	45
8	Influences of an Overhead Power Line on Buried Linear Equipment	46
8.1	INTRODUCTION	46
8.2	The Model and the Area of Computation	46
8.3	Mathematical Model and its Numerical Solution	48
8.4	Illustrative Example – Buried cable	49
8.5	Illustrative Example – Buried Pipeline	52
8.6	CONCLUSION	56
9	Research of some method used for preparing of nanomaterial powders	57
9.1	INTRODUCTION	57
9.2	Composite hydroxide melt	58
9.3	Preparation of titanates	58
9.4	Conclusion	60
10	Electricity price FORECASTING by USING Self-organizing Maps (SOM) and FEED-forward neural network	62
10.1	Introduction	62
10.2	explanation of the model core and basic mathematical equations	64
10.3	neural network (back propagation)	67
10.3.1	Artificial simulation of the matching process	68
10.3.2	New price and settlement	68
10.4	Self-organizing Maps (SOM)	69
10.5	model Calibration	70
10.6	RESULTS	70
10.7	Conclusions	74

11	Assessment of Voltage Dips - Case of Study	75
11.1	INTRODUCTION	75
11.2	Case of study	76
11.2.1	Description of investigated 110-kV network.....	76
11.2.2	Method of Fault Positions	77
11.2.3	Failure Rate of Lines	78
11.3	Calculation of Number and Severity of Voltage Dips.....	78
11.3.1	Theoretical Background	78
11.3.2	Simplifying Assumptions of Calculation	80
11.3.3	Exposed Areas and Exposed Lengths of Lines	80
	Number of Voltage Dips	82
11.4	Comparison of Voltage Dip Monitoring with Voltage Dip Frequency Calculation	83
11.5	Conclusion.....	84
12	LIST OF LITERATURE.....	85
13	LIST OF AUTHORS.....	91
14	REGISTER.....	93
