

CONTENTS

1.	INTRODUCTION	7
2.	PHYSICO-GEOGRAPHICAL DESCRIPTION	11
2.1	Setting	11
2.2	Geology	11
2.3	Orography	11
2.4	Climate	11
2.5	Hydrology	12
2.6	Hydrobiology	12
2.7	Pedology	13
2.8	Biogeography	13
2.8.1	Fauna	13
2.8.2	Vegetation	14
3.	EMISSIONS	16
3.1	Introduction	16
3.2	Emissions at the Site	17
3.3	Conclusion	19
4.	MEASUREMENTS CARRIED OUT AT THE KOŠETICE OBSERVATORY	20
4.1.	Site coding	20
4.1.1	Meteorology, air and precipitation quality	20
4.1.2	Vegetation	20
4.1.3	Surface water	20
4.1.4	Soil and biotic components	20
4.1.5	Basin as a whole	20
4.2	Frequency of measurements	20
4.3	Coding of monitoring network	21
4.3.1	International programmes	21
4.3.2	National networks	21
4.4	Methodological instructions	21
4.5	Overview of measurements at the Košetice Observatory	21
4.5.1	Meteorological and climate measurements	21
4.5.2	Solar radiation	22
4.5.3	Air duality	22
4.5.3.1	Sulphur and nitrogen compounds	22
4.5.3.2	Heavy metals in total suspended particulates	23
4.5.3.3	Greenhouse gases and their precursors	23
4.5.3.4	Aldehydes and ketones	23
4.5.4	Precipitation quality	24
4.5.4.1	All-round analysis of daily precipitation – bulk deposition	24

4.5.4.2	All-round analysis of weekly precipitation – bulk deposition	24
4.5.4.3	All-round analysis of weekly precipitation – wet-only deposition	24
4.5.4.4	All-round analysis of monthly precipitation – bulk deposition	24
4.5.4.5	All-round analysis of monthly precipitation – wet-only deposition	24
4.5.4.6	All-round analysis of monthly precipitation – throughfall	25
4.5.4.7	All-round analysis of daily precipitation – wet-only deposition	25
4.5.5	Surface water	25
4.5.5.1	Hydrological characteristics	25
4.5.5.2	All-round analysis of surface water	25
4.5.6	Biological monitoring	26
4.5.7	Soil	26
4.5.8	Persistent organic compounds	26
4.5.9	Campaigns	27
5.	RESULTS OF MONITORING AT KOŠETICE OBSERVATORY	28
5.1	Climatological characteristics	28
5.2	Solar radiation	33
5.2.1	Total radiation	33
5.2.2	UV–B radiation	34
5.3	Air quality	34
5.3.1	Sulphur compounds	34
5.3.2	Nitrogen compounds	37
5.3.3	Surface ozone	39
5.3.4	Carbon monoxide	41
5.3.5	Methane	41
5.3.6	Volatile Organic Compounds (VOCs)	43
5.3.7	Particulate matters	44
5.3.8	Persistent organic compounds	45
5.3.9	Mercury	45
5.4	Deposition	45
5.5	Surface water	49
5.5.1	Hydrological characteristics	49
5.5.2	Runoff of substances from the basin	49
5.5.3	Hydrobiology	51
5.6	Soil	53
5.6.1	Characteristics of experimental fields	53
5.6.2	Soil sampling	53
5.6.3	Analytical methods	54
6.	LIST OF REFERENCES	58
6.1	References concerning Košetice Observatory	58
6.2	Other references	70
6.3	Overview of methodological guidelines	71

7.	SELECTED ANALYSIS.	73
7.1	Surface Ozone trends at the Czech Regional stations 1992–2006.	75
7.1.1	Introduction	75
7.1.2	Trends	75
7.1.3	Critical levels	77
7.1.4	Conclusions	79
7.1.5	References	80
7.2	PM trends in the Czech Republic	81
7.2.1	Introduction	81
7.2.2	Monitoring network and measurement methods	81
7.2.3	Emissions	83
7.2.4	PM trends in the Czech Republic	83
7.2.5	Critical levels	87
7.2.6	Meteorological aspects	89
7.2.7	Chemical composition	91
7.2.8	Comparison of measured data with model results	91
7.2.9	Conclusions	94
7.2.10	References	96
7.3	Long-term monitoring of VOCs at Košetice Observatory 1993–2005	97
7.3.1	Introduction	97
7.3.2	Emission	97
7.3.3	Methods	98
7.3.4	Data Quality Management	98
7.3.5	Results of VOC Monitoring at Košetice Observatory 1993–2005.	98
7.3.6	Conclusions	107
7.3.7	References	107
7.4	Regional integrated background monitoring of persistent organic pollutants (POPs) – the Central European trends and background levels based on the results of the long-term monitoring in Kosectice observatory, Czech Republic. 1988–2005	109
7.4.1	Introduction	109
7.4.2	Environmental fate of persistent organic pollutants.	111
7.4.3	Methods and materials	112
7.4.3.1	Monitoring approach	112
7.4.3.2	Selection of compounds and matrices	114
7.4.3.3	Sampling techniques and procedures	114
7.4.3.4	Chemical analysis.	114
7.4.3.5	Quality assurance, quality control.	115
7.4.3.6	Data processing and statistical methods	115
7.4.4	Results and discussion	115
7.4.5	Distribution	125
7.4.6	Time related trends	131
7.4.7	Conclusions	131
7.4.8	Acknowledgements	134
7.4.9	Reference	134

7.5	Development of sulphur, nitrogen and ozone deposition in a mountainous area and a rural area in the Czech Republic using model velocities of dry deposition (1994–2006). . .	136
7.6	Monitoring of atmospheric $^{14}\text{CO}_2$ in the Czech Republic.	144
7.6.1	Introduction	144
7.6.2	Sample processing	147
7.6.3	Results and discussion	147
7.6.4	Conclusion	150
7.6.5	References	150
