

**PART – I: Introduction –
Aspects of material science**

Chapter 1	Nonisothermal kinetic models building and identification <i>Jiří Militký</i>	19
Chapter 2	Mathematical modeling, thermodynamic approach, information effect and society connotation: featured thoughts <i>Jaroslav Šesták</i>	29
Chapter 3	Some aspects of vitrification, amorphisation and idiosyncratic wet synthesis when considering the degree of nano-crystallinity <i>Jaroslav Šesták, Carlos A. Queiroz and Bronislav Foller</i>	53

PART – II: Textile fibers

Chapter 4	Fiber cross sectional shape indices <i>Jiří Militký, Dana Křemenáková and Jitka Nováková</i>	78
Chapter 5	Cotton fiber quality characterization by complex indices <i>Jiří Militký and Dana Křemenáková</i>	92
Chapter 6	Thermal and mechanical properties of PET/PEN copolymeric fibers <i>Jiří Militký, Mirka Znojilová and Arun Pal Aneja</i>	105
Chapter 7	Mechanical properties of basalt fibers <i>Jiří Militký and Vladimír Kovačič</i>	117

Chapter 8	Influence of comonomers on dyeing characteristics of modified PET fibers <i>Jiří Militký</i>	127
Chapter 9	Prediction of polyester fibers substitution by PLA fibers <i>Jiří Militký, Arun Pal Aneja and Dana Křemenáková</i>	137
Chapter 10	Pretreated flax fibers bundling tendency <i>Jiří Militký, Dana Křemenáková and Viktor Antonov</i>	145
Chapter 11	Industrial polyester monofilaments thermal shrinkage <i>Jiří Militký, Dana Křemenáková and Marie Košťátková-Hušková</i>	157
Chapter 12	Characterization of side emitting plastic optical fibers light intensity loss <i>Dana Křemenáková, Jiří Militký, Barbora Meryová and Vít Lédl</i>	167

PART – III: Textile yarns

Chapter 13	Components analysis in blended yarns <i>Dana Křemenáková and Jiří Militký</i>	178
Chapter 14	Critical mixing ratio for blended yarn strength <i>Dana Křemenáková and Jiří Militký</i>	188
Chapter 15	Influence of cotton fiber and yarn structure on the properties of rotor yarns <i>Jiří Militký, Dana Křemenáková, Gabriela Krupincová, and Sayed Ibrahim</i>	195
Chapter 16	Prediction of cotton yarn strength <i>Dana Křemenáková and Jiří Militký</i>	211
Chapter 17	Prediction of polypropylene yarn geometry and strength <i>Dana Křemenáková, Jiří Militký, Jitka Sedláčková and Jana Špánková</i>	221

Chapter 18	Strength prediction of staple yarns based on the acoustic and initial modulus <i>Dana Křemenáková, Jiří Militký, Dana Pivoňková and Jana Špánková</i>	231
Chapter 19	Characterization of yarn diameter variation <i>Jiří Militký, Sayed Ibrahim and Dana Křemenáková</i>	238
Chapter 20	Complex characterization of yarn mass unevenness <i>Jiří Militký and Sayed Ibrahim</i>	252
Chapter 21	The compact yarn hairiness <i>Jiří Militký and Sayed Ibrahim</i>	282
Chapter 22	Influence of production technology on the cotton yarn and fabric properties <i>Dana Křemenáková, Jiří Militký, Gabriela Krupincová and Iva Mertová</i>	290

PART – IV: Textile fabrics

Chapter 23	Complex criterion for computer aided textiles design <i>Jiří Militký and Dana Křemenáková</i>	302
Chapter 24	Fabric drape prediction <i>Jiří Militký, Dana Křemenáková and Zdeněk Kůs</i>	311
Chapter 25	Textile fabrics cut resistance <i>Jiří Militký and Chantelle Becker</i>	328
Chapter 26	Air permeability of woollen fabrics <i>Jiří Militký, Michal Vik, Martina Víková and Dana Křemenáková</i>	338
Chapter 27	Spatial statistics and surface uniformity of nonwovens <i>Jiří Militký and Václav Klička</i>	352

Chapter 28	Thermal conductivity prediction of textile materials <i>Jiří Militký and Dana Křemenáková</i>	368
Chapter 29	Electromagnetic shielding of hybrid fabrics <i>Veronika Šafářová and Jiří Militký</i>	376
Chapter 30	Modeling of 3D orthogonal fabrics <i>Rajesh Mishra, Jiří Militký and Bijoy Kumar Behera</i>	387
Chapter 31	Functional characterization of 3D woven nanocomposites <i>Rajesh Mishra, Richa Tiwari, Jiří Militký and Bijoy Kumar Behera</i>	395
