Preface	xi
Preface to the 2nd edition	xv
Notational conventions	xvii
<b>1 Preliminary general material</b>	<b>1</b>
1.1 Functional analysis . . . . .	1
1.1.1 Normed spaces, Banach spaces, locally convex spaces . . . . .	1
1.1.2 Functions and mappings on Banach spaces, dual spaces . . . . .	3
1.1.3 Convex sets . . . . .	6
1.1.4 Compactness . . . . .	7
1.1.5 Fixed-point theorems . . . . .	8
1.2 Function spaces . . . . .	8
1.2.1 Continuous and smooth functions . . . . .	9
1.2.2 Lebesgue integrable functions . . . . .	10
1.2.3 Sobolev spaces . . . . .	14
1.3 Nemytskii mappings . . . . .	19
1.4 Green formula and some inequalities . . . . .	20
1.5 Bochner spaces . . . . .	22
1.6 Some ordinary differential equations . . . . .	25
<b>I STEADY-STATE PROBLEMS</b>	<b>29</b>
<b>2 Pseudomonotone or weakly continuous mappings</b>	<b>31</b>
2.1 Abstract theory, basic definitions, Galerkin method . . . . .	31
2.2 Some facts about pseudomonotone mappings . . . . .	35
2.3 Equations with monotone mappings . . . . .	37
2.4 Quasilinear elliptic equations . . . . .	42
2.4.1 Boundary-value problems for 2nd-order equations . . . . .	43
2.4.2 Weak formulation . . . . .	44
2.4.3 Pseudomonotonicity, coercivity, existence of solutions . . . . .	48

2.4.4	Higher-order equations . . . . .	56
2.5	Weakly continuous mappings, semilinear equations . . . . .	61
2.6	Examples and exercises . . . . .	64
2.6.1	General tools . . . . .	64
2.6.2	Semilinear heat equation of type $-\operatorname{div}(\mathbb{A}(x, u)\nabla u) = g$ . . . . .	68
2.6.3	Quasilinear equations of type $-\operatorname{div}( \nabla u ^{p-2}\nabla u) + c(u, \nabla u) = g$ . . . . .	75
2.7	Excursion to regularity for semilinear equations . . . . .	85
2.8	Bibliographical remarks . . . . .	92
<b>3</b>	<b>Accretive mappings</b>	<b>95</b>
3.1	Abstract theory . . . . .	95
3.2	Applications to boundary-value problems . . . . .	99
3.2.1	Duality mappings in Lebesgue and Sobolev spaces . . . . .	99
3.2.2	Accretivity of monotone quasilinear mappings . . . . .	101
3.2.3	Accretivity of heat equation . . . . .	105
3.2.4	Accretivity of some other boundary-value problems . . . . .	108
3.2.5	Excursion to equations with measures in right-hand sides .	109
3.3	Exercises . . . . .	112
3.4	Bibliographical remarks . . . . .	114
<b>4</b>	<b>Potential problems: smooth case</b>	<b>115</b>
4.1	Abstract theory . . . . .	115
4.2	Application to boundary-value problems . . . . .	120
4.3	Examples and exercises . . . . .	126
4.4	Bibliographical remarks . . . . .	130
<b>5</b>	<b>Nonsmooth problems; variational inequalities</b>	<b>133</b>
5.1	Abstract inclusions with a potential . . . . .	133
5.2	Application to elliptic variational inequalities . . . . .	137
5.3	Some abstract non-potential inclusions . . . . .	145
5.4	Excursion to quasivariational inequalities . . . . .	154
5.5	Exercises . . . . .	157
5.6	Some applications to free-boundary problems . . . . .	163
5.6.1	Porous media flow: a potential variational inequality .	163
5.6.2	Continuous casting: a non-potential variational inequality .	166
5.7	Bibliographical remarks . . . . .	169
<b>6</b>	<b>Systems of equations: particular examples</b>	<b>171</b>
6.1	Minimization-type variational method: polyconvex functionals .	171
6.2	Buoyancy-driven viscous flow . . . . .	178
6.3	Reaction-diffusion system . . . . .	186
6.4	Thermistor . . . . .	188
6.5	Semiconductors . . . . .	192

<b>II EVOLUTION PROBLEMS</b>	<b>199</b>
<b>7 Special auxiliary tools</b>	<b>201</b>
7.1 Sobolev-Bochner space $W^{1,p,q}(I; V_1, V_2)$ . . . . .	201
7.2 Gelfand triple, embedding $W^{1,p,p'}(I; V, V^*) \subset C(I; H)$ . . . . .	204
7.3 Aubin-Lions lemma . . . . .	207
<b>8 Evolution by pseudomonotone or weakly continuous mappings</b>	<b>213</b>
8.1 Abstract initial-value problems . . . . .	213
8.2 Rothe method . . . . .	215
8.3 Further estimates . . . . .	230
8.4 Galerkin method . . . . .	240
8.5 Uniqueness and continuous dependence on data . . . . .	247
8.6 Application to quasilinear parabolic equations . . . . .	251
8.7 Application to semilinear parabolic equations . . . . .	261
8.8 Examples and exercises . . . . .	264
8.8.1 General tools . . . . .	264
8.8.2 Parabolic equation of type $\frac{\partial}{\partial t}u - \operatorname{div}( \nabla u ^{p-2}\nabla u) + c(u) = g$ . . . . .	266
8.8.3 Semilinear heat equation $c(u)\frac{\partial}{\partial t}u - \operatorname{div}(\kappa(u)\nabla u) = g$ . . . . .	277
8.8.4 Navier-Stokes equation $\frac{\partial}{\partial t}u + (u \cdot \nabla)u - \Delta u + \nabla \pi = g$ , $\operatorname{div} u = 0$ . . . . .	279
8.8.5 Some more exercises . . . . .	282
8.9 Global monotonicity approach, periodic problems . . . . .	288
8.10 Problems with a convex potential: direct method . . . . .	294
8.11 Bibliographical remarks . . . . .	300
<b>9 Evolution governed by accretive mappings</b>	<b>303</b>
9.1 Strong solutions . . . . .	303
9.2 Integral solutions . . . . .	308
9.3 Excursion to nonlinear semigroups . . . . .	314
9.4 Applications to initial-boundary-value problems . . . . .	319
9.5 Applications to some systems . . . . .	326
9.6 Bibliographical remarks . . . . .	332
<b>10 Evolution governed by certain set-valued mappings</b>	<b>335</b>
10.1 Abstract problems: strong solutions . . . . .	335
10.2 Abstract problems: weak solutions . . . . .	339
10.3 Examples of unilateral parabolic problems . . . . .	343
10.4 Bibliographical remarks . . . . .	349
<b>11 Doubly-nonlinear problems</b>	<b>351</b>
11.1 Inclusions of the type $\partial\Psi(\frac{d}{dt}u) + \partial\Phi(u) \ni f$ . . . . .	351
11.1.1 Potential $\Psi$ valued in $\mathbb{R} \cup \{+\infty\}$ . . . . .	351
11.1.2 Potential $\Phi$ valued in $\mathbb{R} \cup \{+\infty\}$ . . . . .	358
11.1.3 Uniqueness and continuous dependence on data . . . . .	366

11.2 Inclusions of the type $\frac{d}{dt}E(u) + \partial\Phi(u) \ni f$ . . . . .	367
11.2.1 The case $E := \partial\Psi$ . . . . .	368
11.2.2 The case $E$ non-potential . . . . .	372
11.2.3 Uniqueness . . . . .	375
11.3 2nd-order equations . . . . .	377
11.4 Exercises . . . . .	385
11.5 Bibliographical remarks . . . . .	390
<b>12 Systems of equations: particular examples</b>	<b>393</b>
12.1 Thermo-visco-elasticity . . . . .	393
12.2 Buoyancy-driven viscous flow . . . . .	405
12.3 Predator-prey system . . . . .	408
12.4 Semiconductors . . . . .	412
12.5 Phase-field model . . . . .	416
12.6 Navier-Stokes-Nernst-Planck-Poisson-type system . . . . .	420
12.7 Thermistor with eddy currents . . . . .	426
12.8 Thermodynamics of magnetic materials . . . . .	432
12.9 Thermo-visco-elasticity: fully nonlinear theory . . . . .	438
<b>Bibliography</b>	<b>449</b>
<b>Index</b>	<b>469</b>
