*Acknowledgements* xv

*Introduction* xvii

## 1. The origins of the Metre Convention, 1851 to 1869 3

Why? 3

The need for international agreement on measurement standards 4

The Great Exhibition of 1851 in London 6

The 1855 Paris Universal Exhibition and Statistical Congress 8

The 1867 Paris Universal Exhibition: A time of political tension  
in Europe 10

The unit of length for geodesy and the original definition of the metre 12

The International Conferences on Geodesy, Berlin, 1864 and 1867 14

Reactions from France: The Bureau des Longitudes 18

Academy of Science of Saint Petersburg 20

Reaction from the Académie des sciences 20

## 2. The creation of the International Metre Commission, 1869 26

Creation of the Metre Commission 26

The members of the French Section of the Metre Commission 29

The first meetings of the French Section 31

Once again: What should the origin of the new international metre be?	34
The first meeting of the Metre Commission, August 1870	37
<b>3. The International Metre Commission: meetings of 1872 and 1873</b>	<b>45</b>
The order of things from 1869 to 1875	45
The Committee for Preparatory Research, April 1872	46
The International Metre Commission, September–October 1872	49
<b>4. The casting of 1874 and the first of the new metre bars</b>	<b>62</b>
Great Britain decides not to join	62
The problem of melting and casting platinum	64
Preparations for the Conservatoire casting	65
The casting of 250 kilograms of platinum-iridium on 13 May, 1874	67
Approval of the Permanent Committee	68
First indications that the alloy of the Conservatoire was contaminated	70
To proceed regardless	72
<b>5. The Diplomatic Conference of the Metre, 1875</b>	<b>74</b>
The first sessions of the Conference	74
The Special Commission	76
First drafts of the Convention	78
Attempts at a compromise proposal	82
The opinion of the French Government	82
The first vote on the proposals	84
The 12 and 15 April sessions of the Diplomatic Conference	85
The signing of the Metre Convention on 20 May, 1875	86
<b>6. The creation of the BIPM and the new metric prototypes take shape</b>	<b>88</b>
The first meeting of the International Committee for Weights and Measures	88
The founding members of the International Committee	90
Choosing the site for the International Bureau: The Pavillon de Breteuil	94
Decisions on the main instruments for the new institute	97

Progress between April 1875 and April 1876: Design for laboratory building	100
Difficult relations between the International Committee and the French Section	103
The International Committee refuses the 1874 alloy	106
A new railway line and improved relations with the French Section	108
<b>7. The first decade of scientific work at the BIPM, 1879 to 1889</b>	<b>111</b>
Progress with metres and instruments	111
Publications, official and scientific, and the library	112
Elections to the International Committee	113
Construction of the new prototypes, the metres	114
Construction of the new prototypes, the kilograms	117
More on the metres	120
Good relations with the French Section	121
The measurement of temperature, the 1887 hydrogen scale	125
A first unsuccessful step towards electrical standards at the BIPM	127
<b>8. New Member States and the First General Conference on Weights and Measures, 1889</b>	<b>133</b>
New States join, including Great Britain	133
Time to call a General Conference?	135
Final acts of the French Section	136
The first General Conference on Weights and Measures, September 1889	138
The formal adoption of the new metric prototypes	142
The distribution of national prototypes	144
In the end, who was right about the alloy of the Conservatoire?	146
<b>9. Scientific work at the BIPM and the General Conferences of 1895 and 1901</b>	<b>148</b>
More new scientific work	148
Thermometry	149

The density of water	151
The length of the metre in terms of the wavelength of light	153
Calibrations	156
Staff health problems and building repairs	158
Members of the International Committee	159
The <i>toise</i> and the Imperial Standard Yard	162
The Second General Conference and the BIPM pension scheme and reserve fund	164
The Third General Conference: Was the BIPM too small and fragile?	167
<b>10. The creation of the Grands Laboratoires</b>	<b>173</b>
The Physikalisch-Technische Reichsanstalt	174
The National Physical Laboratory	175
The National Bureau of Standards	177
A French national standards laboratory?	178
<b>11. The story of invar and the Convention of 1921</b>	<b>180</b>
The origins of the discovery of invar	180
Thermal and mechanical properties of invar	182
Proposals to modify the Convention and its Regulations, the meaning of "by common accord"	184
Scientific staff of the Bureau	187
The Fifth General Conference and proposals for a new temperature scale	189
Legal and practical metrology	191
The International Bureau, 1914 to 1918	191
The meeting of the International Committee in 1920 and the resignation of Foerster	194
Plans to broaden the range of the Bureau's work	198
The opening of the Sixth General Conference, 27 September, 1921	200
Objections to the new role for the International Bureau	202
Final conclusions of the Conference: A new Convention and a broader role for the International Bureau	204

<b>12. The Seventh and Eighth General Conferences, 1927 and 1933, practical metrology and the Bureau during the Second World War</b>	<b>208</b>
The financial situation of the Bureau in the 1920s	208
Results of the first verification of national prototypes of the metre	210
What should the standard temperature for length metrology be?	212
Quartz reference standards for length and proposals for a new definition of the metre	214
Electrical standards at the Bureau and the creation of the Consultative Committee for Electricity	216
The International Temperature Scale of 1927	218
The beginning of electrical work at the International Bureau	220
The move to absolute electrical units	221
A Consultative Committee for Photometry and a new standard of light	223
The International Committee takes an important decision related to practical metrology	226
Other activities of the International Committee and International Bureau in the 1930s	230
The International Bureau during the Second World War	233
Scientific work during the war	236
<b>13. The SI, absolute electrical units, and the ionizing radiation section</b>	<b>240</b>
The call for an International System of Units	240
The substitution of absolute electrical units for the 1908 International Units	241
Objections on the part of the PTR	244
A date for implementation of the absolute system and interruption caused by the war	245
The need to act quickly	246
Final decisions of the International Committee	247
Final discussions on practical metrology	248
New science, new prospects for units	252
The International Committee after the war	252

The International Bureau and its staff after the war:	
The Accord de Siège	255
The creation of the Ionizing Radiation Section at the Bureau	259
<b>14. The Eleventh General Conference, 1960: Many decisions to be made</b>	<b>263</b>
The International System of Units (SI)	263
Preparations to revise the Metre Convention	266
Discussions at the Eleventh General Conference	267
The change in definition of the metre: Arguments for and against	269
Which radiation to choose?	271
The new definition of the metre and the International Bureau	273
Financial matters and problems of the Cold War	275
The definition of the second	277
The International Committee decides	279
Problems with the new definition of the second	280
The second redefined again in 1967	281
The development of the scientific work of the International Bureau up to 1975	282
The influence on the Bureau of national standards laboratories	284
Laser wavelength standards at the Bureau	285
Staff development at the Bureau	286
Calibrations: An evolving activity at the Bureau	287
The new journal, <i>Metrologia</i>	288
<b>15. The mole, the speed of light, and more about the Metre Convention</b>	<b>290</b>
The mole and chemistry	290
The first attempt to bring chemistry into the affairs of the Bureau	292
The 13 <sup>th</sup> CGPM and its refusal to adopt the notation	295
The Centenary of the Metre Convention in 1975	297
Redefinition of the metre in terms of the speed of light	299
New proposals to modify the Metre Convention	301
The direction and supervision of the International Bureau from 1975 to 2003	305

The financial situation of the BIPM from 1975 to 2003	306
The Pavillon du Mail, some difficulties with building permission	308
<b>16. New science at the BIPM and mutual recognition of national measurement standards</b>	<b>311</b>
The BIPM staff in the last quarter of the 20th century	311
Developments in photometry and radiometry and a new definition of the candela	313
International Atomic Time and Coordinated Universal Time	315
Other new science at the Bureau	318
The new quantum electrical standards	319
The mechanical workshop of the BIPM	320
Chemistry at last comes to the CIPM and BIPM	321
Traceability in laboratory medicine	325
The International Organization for Legal Metrology	326
The CIPM Mutual Recognition Arrangement for National Measurement Standards: Early discussions	328
First moves towards an MRA	330
Regional metrology organizations	332
Other pressures on national laboratories and looking to the BIPM	333
First meeting of Directors of national metrology institutes and first draft of an MRA	335
Quality systems and key comparison reference values	336
Final agreement reached	338
<b>17. The redefinition of the kilogram and the move towards the new SI</b>	<b>341</b>
The kilogram from 1889 to the present day	341
Advances in science that at last make absolute units possible	346
The watt balance	348
To determine the mass of an atom by x-ray crystal density of silicon	351
Comparing the results from the watt balance and the silicon crystal density experiments	353
How and when to proceed to an actual redefinition of the kilogram	355

What does it mean to fix the numerical value of a fundamental constant and how do we use it to define a unit?	357
The arguments against a new definition	359
Redefining the ampere, kelvin, and mole	360
How to formulate the new definitions	363
The CIPM proposes an absolute system of units based on the fundamental constants of physics	365
<b>18. Epilogue: The new SI and the future role of the BIPM</b>	<b>368</b>
Looking back	368
The new SI and the BIPM	369
The central role of key comparisons	369
The BIPM as an international and neutral scientific institution	371
Coordination of world metrology	372
<i>Bibliography</i>	373
<i>Appendix I: The Metre Convention</i>	387
<i>Appendix II: Presidents and Secretaries of the CIPM and Directors of the BIPM</i>	397
<i>Index</i>	399
