

CONTENTS

<i>Preface</i>	v
H. ANTIL <i>Control of free boundary problems with surface tension effect</i>	1
M. BULÍČEK <i>Analysis of strain-limiting models in solid mechanics</i>	2
V. CIML, T. HORÁKOVÁ <i>SlidesLive – Be part of the modern Bibliotheca Alexandrina</i>	3
M. ČAPEK <i>Blood clot modelling</i>	4
L. DIENING, L. C. BERSELLI, D. BREIT, S. SCHWARZACHER <i>Finite elements for electrorheological fluids</i>	5
W. DREYER, C. GUHLKE <i>Modelling of the nonlocal and nonlinear material behavior of many-particle electrodes</i>	6
H. ELMAN, V. FORSTALL, Q. LIAO <i>Efficient solution of parameterized partial differential equations using reduced-order models</i>	7
M. GANDER <i>From Lagrangian mechanics to optimal control and PDE constraints</i>	8
T. GERGELITS, Z. STRAKOŠ <i>On the properties of Krylov subspaces in finite precision CG computations</i>	9
G. GRÜN, S. METZGER, H. GARCKE <i>On micro-macro-models for two-phase flow with dilute polymeric solutions – modeling and analysis</i>	10
F. GUILLEN-GONZALEZ <i>Splitting in time schemes: from fluids to phase-field models</i>	11
P. GWIAZDA <i>Regular Lagrangian flow and size-structure equations</i>	12
R. HERZOG, J. C. DE LOS REYES, C. MEYER <i>Optimal control of static elastoplasticity in primal and dual formulations</i>	13
H. ITOU <i>On convergent series expansions of solutions of Navier's equation near singular points</i>	14
A. JANEČKA <i>Beam theory for implicitly constituted elastic material</i>	15
Y. KAGEI <i>On asymptotic behavior of solutions to the compressible Navier-Stokes equation in a periodic layer</i>	16

M. KALOUSEK	
<i>Homogenization of a non-Newtonian flow through a porous medium</i>	17
T. KARPER	
<i>Convergent numerical methods for the compressible Navier-Stokes equations</i> . .	18
V. KULVAIT	
<i>Numerical computations of Anti-plane stress state of the plate with strain limiting response in the V-shaped domain in FeniCS package</i>	19
M. LANZENDÖRFER	
<i>Piezo-viscous fluids flows in lubrication</i>	20
C. LIU	
<i>Energetic variational approaches in elastic complex fluids</i>	21
Y. LU, E. FEIREISL, J. MÁLEK	
<i>Limit problems for compressible Navier-Stokes equations with singular pressure</i>	22
S. METZGER, G. GRÜN, F. GUILLÉN-GONZÁLEZ, F. KLINGBEIL	
<i>On convergent fully decoupled time-splitting schemes for diffuse interface models for two-phase flow of incompressible fluids with general mass densities</i> . . .	23
G. MEURANT	
<i>The computation of bivariate orthogonal polynomials</i>	24
M. MICHÁLEK	
<i>Compressible Navier-Stokes equations with transport of entropy</i>	25
P. MINAKOWSKI, J. HRON, J. KRATOCHVÍL, M. KRUŽÍK, J. MÁLEK	
<i>Plastic deformation treated as material flow through adjustable crystal lattice, modeling analysis and simulations</i>	26
B. MÜLLER, G. STARKE, J. SCHRÖDER, A. SCHWARZ	
<i>Mixed least squares finite element methods based on inverse stress-strain relations in hyperelasticity</i>	27
V. ORAVA, O. SOUČEK, P. ČENDULA	
<i>Modelling of reactive multiphase flow and heat transfer in fluidized bed reactor</i>	28
J. PAPEŽ, Z. STRAKOŠ, M. TANI	
<i>Interpretation of the algebraic error and algebraic preconditioning as the transformation of the discretization basis</i>	29
H. A. PEKER	
<i>Dtm-Pade technique for computing the nonlinear PDEs</i>	30
M. PRANIC, S. POZZA, Z. STRAKOŠ	
<i>Complex Gauss quadrature</i>	31
D. PRAŽÁK, T. BÁRTA, V. JANEČEK	
<i>Heat conduction problem of an evaporating liquid wedge</i>	32
V. PRŮŠA, T. PERLÁCOVÁ	
<i>Tensorial implicit constitutive relations in mechanics of incompressible non-Newtonian fluids</i>	33

I. PULTAROVÁ	
<i>CBS constants for stochastic Galerkin method</i>	34
K. RAJAGOPAL	
<i>On implicit constitutive theories</i>	35
R. RANNACHER	
<i>FE approximation of degenerated parabolic initial-boundary-value problems with non-Lipschitzian nonlinearities</i>	36
T. RICHTER	
<i>Temporal discretization of Eulerian fluid-structure interactions</i>	37
E. ROHAN	
<i>Homogenization and nonlinearity in deforming heterogeneous media</i>	38
M. ŘEHOŘ	
<i>Numerical issues in mathematical modelling of float glass process</i>	39
S. SCHWARZACHER, D. BREIT, L. DIENING, A. CIANCHI	
<i>Pointwise estimates for energy solutions</i>	40
D. SILVESTER, A. BESPALOV, C. POWELL	
<i>Implicit solvers for incompressible flow problems</i>	41
O. SOUČEK, M. HEIDA, J. MÁLEK	
<i>On the derivation of thermodynamically consistent boundary conditions for Korteweg type fluids</i>	42
G. STARKE, B. MÜLLER	
<i>Accuracy of momentum balance and surface forces for finite element computations in elasticity</i>	43
E. SÜLI, J. W. BARRETT	
<i>Existence of global weak solutions to compressible isentropic finitely extensible nonlinear bead-spring chain models for dilute polymers</i>	44
A. ŚWIERCZEWSKA-GWIAZDA, M. BULÍČEK, P. GWIAZDA, E. SÜLI	
<i>Polymeric fluids</i>	45
H. ŠVIHLOVÁ	
<i>Determination of energy dissipation and pressure drop across cardiac stenoses</i>	46
G. TIERRA, G. N. GATICA, R. RUIZ-BAIER	
<i>A mixed finite element method for Darcy's equations with pressure dependent porosity</i>	47
K. TŮMA, J. HRON, J. MÁLEK, K. R. RAJAGOPAL	
<i>Thermodynamically compatible viscoelastic model suitable for modeling geomaterials</i>	48
J. VYBÍRAL	
<i>Ways to measure compactness</i>	49
A. WATHEN, E. McDONALD	
<i>A simple proposal for parallel implicit time evolution</i>	50

M. WEISER	
<i>Adaptive spectral deferred correction methods for cardiac simulation</i>	51
E. WIEDEMANN, G. CRIPPA, N. GUSEV, S. SPIRITO	
<i>Renormalization defects for continuity equations</i>	52
J. ŽABENSKÝ	
<i>On generalized Stokes' and Brinkman's equations with pressure- and shear- dependent viscosity and drag coefficient</i>	53
