1	Introduction and Overview of Security Games	1
	<i>Milind Tambe and Manish Jain</i>	
1.1	Introduction	1
1.2	Motivation: Security Games	3
1.3	Overview of Part II: Applications of Security Games	9
1.4	Overview of Part III: Algorithmic Advances to Achieve Scale-up in Security Games	11
1.5	Part IV: Toward the Future	17
1.6	Summary	23

PART I: SECURITY EXPERTS' PERSPECTIVES

2	LAX – Terror Target: The History, the Reason, the Countermeasure	27
	<i>Erroll G. Southers</i>	
2.1	Introduction	27
2.2	A Brief History of Significant Events	27
2.3	Terrorism and the Economic Significance of the Aviation Domain	34
2.4	Aviation Security	36
2.5	LAX Terror History	37
2.6	RAND Study	39
2.7	Los Angeles World Airports Police	41
2.8	Terrorist Operational Planning Cycle	44
2.9	CREATE Pilot Project	45
2.10	Summary	49

3	Maritime Transportation System Security and the Use of Game Theory: A Perfect Match to Address Operational and Tactical Concerns	51
	<i>Dr. Joe DiRenzo III, Lieutenant Commander Ben Maule, Lieutenant Commander Erik Jensen, and Lieutenant Fred S. Bertsch IV</i>	
PART II: DEPLOYED APPLICATIONS		
4	Deployed ARMOR Protection: The Application of a Game-Theoretic Model for Security at the Los Angeles International Airport	67
	<i>James Pita, Manish Jain, Janusz Marecki, Fernando Ordóñez, Christopher Portway, Milind Tambe, Craig Western, Praveen Paruchuri, and Sarit Kraus</i>	
4.1	Introduction	67
4.2	Related Work	69
4.3	Security Domain Description	70
4.4	Approach	72
4.5	System Architecture	76
4.6	Design Challenges	80
4.7	Experimental Results	81
4.8	Summary	86
5	IRIS – A Tool for Strategic Security Allocation in Transportation Networks	88
	<i>Jason Tsai, Shyamsunder Rathi, Christopher Kiekintveld, Fernando Ordóñez, and Milind Tambe</i>	
5.1	Introduction	88
5.2	Federal Air Marshal Service	91
5.3	Background	92
5.4	System Architecture	96
5.5	Major Challenges	98
5.6	Organizational Acceptance	100
5.7	Experimental Results	102
5.8	Summary	104
6	GUARDS: Game-Theoretic Security Allocation on a National Scale	107
	<i>James Pita, Milind Tambe, Christopher Kiekintveld, Shane Cullen, and Erin Steigerwald</i>	

6.1	Introduction	107
6.2	Background	109
6.3	National Deployment Challenges	111
6.4	System Architecture	118
6.5	Evaluation	119
6.6	Lessons in Transitioning Research into Practice	124
6.7	Related Work and Summary	125
PART III: EFFICIENT ALGORITHMS FOR MASSIVE SECURITY GAMES		
7	Coordinating Randomized Policies for Increasing the Security of Agent Systems	131
	<i>Praveen Paruchuri, Jonathan P. Pearce, Janusz Marecki, Milind Tambe, Fernando Ordóñez, and Sarit Kraus</i>	
7.1	Introduction	131
7.2	Related Work	134
7.3	Randomization with No Adversary Model	135
7.4	Randomization Using a Partial Adversary Model	140
7.5	Experimental Results	147
7.6	Conclusions and Policy Implications	153
8	Computing Optimal Randomized Resource Allocations for Massive Security Games	156
	<i>Christopher Kiekintveld, Manish Jain, Jason Tsai, James Pita, Fernando Ordóñez, and Milind Tambe</i>	
8.1	Introduction	156
8.2	Game-Theoretic Modeling of Security Games	157
8.3	Motivating Domains	159
8.4	A Compact Representation for Multiple Resources	161
8.5	Exploiting Payoff Structure	165
8.6	Scheduling and Resource Constraints	169
8.7	Experimental Evaluation	171
8.8	Conclusion	175
9	Security Games with Arbitrary Schedules: A Branch-and-Price Approach	177
	<i>Manish Jain, Erim Kardeş, Christopher Kiekintveld, Milind Tambe, and Fernando Ordóñez</i>	
9.1	Introduction	177
9.2	SPARS	178

9.3	ASPEN Solution Approach and Related Work	180
9.4	ASPEN Column Generation	181
9.5	Improving Branching and Bounds	184
9.6	Experimental Results	186
9.7	Conclusion	189
PART IV: FUTURE RESEARCH		
10	Effective Solutions for Real-World Stackelberg Games: When Agents Must Deal with Human Uncertainties	193
	<i>James Pita, Manish Jain, Fernando Ordóñez, Milind Tambe, Sarit Kraus, and Reuma Magori-Cohen</i>	
10.1	Introduction	193
10.2	Background	195
10.3	Robust Algorithms	198
10.4	Experiments	204
10.5	Summary and Related Work	211
11	Approximation Methods for Infinite Bayesian Stackelberg Games: Modeling Distributional Payoff Uncertainty	213
	<i>Christopher Kiekintveld, Janusz Marecki, and Milind Tambe</i>	
11.1	Introduction	213
11.2	Related Work	214
11.3	Bayesian Security Games	215
11.4	Solution Methods	219
11.5	Experimental Evaluation	224
11.6	Conclusion	231
12	Stackelberg versus Nash in Security Games: Interchangeability, Equivalence, and Uniqueness	233
	<i>Zhengyu Yin, Dmytro Korzhuk, Christopher Kiekintveld, Vincent Conitzer, and Milind Tambe</i>	
12.1	Introduction	233
12.2	Motivating Domains	235
12.3	Definitions and Notation	235
12.4	Equilibria in Security Games	238
12.5	Multiple Attacker Resources	248
12.6	Experimental Results	250
12.7	Summary and Related Work	252

13	Evaluating Deployed Decision-Support Systems for Security: Challenges, Analysis, and Approaches	254
	<i>Matthew E. Taylor, Christopher Kiekintveld, and Milind Tambe</i>	
13.1	Introduction	254
13.2	Background: ARMOR and IRIS	255
13.3	Formulating the Problem	257
13.4	Evaluating Case Studies	261
13.5	Goals for Security Decision-Support Systems	272
13.6	Types of Evaluation	274
13.7	Related Work	278
13.8	Conclusions	281
