

# CONTENTS

I.	INTRODUCTION .....	6
II.	DOMAIN ANALYSIS OF CONTROL SYSTEMS.....	7
II.1	Frequency responses.....	7
II.1.1	Frequency-domain specifications.....	15
II.1.2	Frequency response plots.....	15
II.1.3	Polar plots of system with pure time delay.....	26
II.1.4	Logarithmic amplitude and phase characteristic - Bode plot .....	29
II.2	Nyquist stability criterion .....	43
II.2.1	Nyquist stability condition .....	43
II.2.2	Checking of stability condition for a given system ...	47
II.2.3	Stability of linear control systems with the time delay	62
II.2.4	Relative stability .....	67
III.	DESIGN OF CONTROL SYSTEMS.....	72
III.1	Closed-loop control of feedback control configurations	73
III.2	Steady-state error in feedback system. ....	78
III.3	Design of controller according integral performance index.....	82
III.3.1	Design of PID controller by minimize the ISE performance index .....	85
III.3.2	Design of PID controller by minimization of the IE performance .....	101
III.4	Design of control system by given performance specification .....	113
III.4.1	Design of controller parameters according the optimum modul .....	113
III.4.2	Design of controller parameters according the minimum of absolute damping .....	121
III.5	Frequency-response approach to control system design	125
III.5.1	Performance measures on the bode plot of $R(s)F_u(s)$ ...	125
III.5.2	Phase-lead, phase-lag, filters .....	128
III.5.3	Series compensation .....	132
III.5.4	Design with the PI controller .....	135
III.5.5	Design with the PD controller .....	147
III.5.6	Design with PID controller .....	150
III.5.7	Design with the phase-lead controller .....	155

III.5.8	Design with the phase-lag controller .....	162
III.6	Design of control system with pure time delay .....	167

IV.	MULTILOOP CONTROL SYSTEMS.....	170
IV.1	Feedforward control .....	170
IV.2	Series feedback compensation .....	173
IV.3	Control system with objective ( help ) variable .....	177
V.	MULTIVARIABLE SYSTEMS .....	184
V.1	Transfer function of multivariable systems .....	185
V.2	Block diagrams of multivariable systems .....	191
V.3	Feed forward control for measurable disturbances .....	194
V.4	Autonomous control - design of the diagonal transfer matrix .....	199

VI.	NONLINEAR SYSTEMS .....	212
VI.1	Common physical nonlinearities.....	213
VI.2	Analysis of nonlinear systems .....	219
VI.2.1	Stability concepts of nonlinear systems .....	219
VI.2.2	Phase-plane method .....	221
VI.2.3	Construction of phase-trajectories .....	223
VI.2.3.1	Isocline method .....	224
VI.2.3.2	Analytical method .....	229
VI.2.3.3	Numerical methods .....	231
VI.2.4	Singular points and stability at a equilibrium points	232
VI.2.5	Phase portraits of singular points .....	236
VI.2.6	Ljapunov's stability criterion .....	248
VI.2.6.1	Basic stability theorems .....	248
VI.2.6.2	Method of constructing liapunov function .....	257
VI.2.7	Popov's stability criterion .....	267

## APPENDIXS

A1	Complex variable concept .....	274
A2	Laplace transformation .....	296
A3	Method for finding inverse Laplace transform .....	323
A4	Summar of matrix theory .....	334
A5	Minimization method using Lagrange multipliers .....	344
	Bibliography .....	345
