

CONTENTS

I. Objective of methodology	4
II. Description of methodology	4
1. Introduction	4
2. Writing programs for matrix algebra and files in The SAS.....	5
Matrix operations	6
Work with files	6
Manipulation with files and matrices	7
3. Linear model with fixed effects	8
4. Linears models with random (animal) effect	11
BLUP – Animal Model.....	11
Regression coefficients of loci by RRBLUP and calculation of DGV.	19
GBLUP.....	23
ssGBLUP	26
5. BLUPF90-family programs	31
6. DMU programs.....	43
III. Novelty of approaches	53
IV. Description of application	54
V. Economic standpoints	54
VI. References	54
VII. Own publications preceding this methodology.....	55

EXAMPLES

Own calculation in The SAS

1. Simple average	9
2. Two herds	9
3. Herds and regression	10
4. More cross-classified effects	10
5. ST animal model	12
6. ST animal model, related animals	12
7. BLUP from external files	13
8. BLUP with direct calculation of inversion of relationship	16
9. Regression coefficients of loci	20
10. Genomic relationship in BLUP	24
11. Single step GEBV	26

BLUPF90

12. Single-trait BLUP	32
13. Multi-trait for variance components	32
14. GEBV with ssGBLUP	33
15. RR-TDM for milk	35
16. EBV for direct and maternal genetic effects	38
17. ssGBLUP for RR-TDM with three lactations	40

DMU

18. ST animal model	45
19. Variance components for MT	46
20. GEBV with ssGBLUP method	47
21. RR-TDM for milk	47
22. EBV for direct and maternal genetic effects	48
23. GEBV for RR-TDM with three lactations	49
