

INDEX

1 DESCRIPTION OF HUB AND SPOKE TECHNOLOGY	9
2 TARGET OF DISSERTATION WORK	10
3 SURVEY OF THE MAIN RESOLUTION STATE OF THE PROBLEMS	10
4 MATHEMATICAL MODELS FOR OPTIMAL ARCHITECTURE OF HUB AND SPOKE TECHNOLOGY SYSTEM DESIGNED FOR AND TWO-WAYS FLOWS OF GOODS	12
4.1 Mathematical model for one-way flow of goods without fleet selection	12
4.2 Mathematical model for two-ways flow of goods without fleet selection	15
4.3 Mathematical model for one-way flow of goods for vehicle fleet selection (regarding vehicles capacity)	19
4.4 Mathematical model for two-ways flow of goods for vehicle fleet selection	22
4.5 Mathematical model for two-ways flow of goods for fleet selection for optimizing the total cost	26
5 SOFTWARE XPRESS-IVE	27
6 NUMERICAL EXPERIMENTS WITH THE PROPOSED MODELS	29
6.1 Conclusions resulting from experiments with simple testing problems	30
6.2 Conclusions resulting from experiments with bigger quantity entry data	30
7 BENEFITS OF THIS DISSERTATION THESIS	37
7.1 Benefits for the science and practise	37
7.2 Possibilities to continue in the future on basis of this dissertation thesis	38
8 CONCLUSION.	39
BIBLIOGRAPHY	41
LIST OF THE PUBLICATION DONE BY THE STUDENT AND FURTHER ACTIVITIES IN THE FIELD OF THE DOCTORAL STUDIES	44
CURRICULUM VITAE	46
CURRICULUM VITAE	47
