Foreword	ix
Preface	xi
About the Authors	xv
Acknowledgments	xvii
1 An Introduction to Cloud Computing	1
1.1 The background of Cloud computing	1
1.2 Cloud computing is an integration of other advanced technologies	3
1.3 The driving forces of Cloud computing	8
1.4 The development status and trends of Cloud computing	8
1.5 The classification of Cloud computing applications	10
1.6 The different roles in the Cloud computing industry chain	12
1.7 The main features and technical challenges of Cloud computing	13
Summary	15
References	15
2 Big Data Technologies and Cloud Computing	17
2.1 The background and definition of big data	17
2.2 Big data problems	20
2.3 The dialectical relationship between Cloud computing and big data	26
2.4 Big data technologies	28
Summary	46
Acknowledgments	46
References	47
3 Resource Modeling and Definitions for Cloud Data Centers	51
3.1 Resource models in Cloud data centers	51
3.2 Data center resources	51
3.3 Categories of Cloud data center resources	54
3.4 Constraints and dependencies among resources	69
3.5 Data modeling of resources in a Cloud data center	70
3.6 Conclusion	75
Appendix 1: The UML Relationship of Resources	76
References	77

4	Cloud Resource Scheduling Strategies	79
4.1	Key technologies of resource scheduling	79
4.2	Comparative analysis of scheduling strategies	80
4.3	Classification of main scheduling strategies	85
4.4	Some constraints of scheduling strategies	90
4.5	Scheduling task execution time and trigger conditions	90
	Summary	91
	Appendix: Some elementary terms	91
	References	92
5	Load Balance Scheduling for Cloud Data Centers	95
5.1	Introduction	95
5.2	Related work	96
5.3	Problem formulation and description	96
5.4	OLRSA algorithm	101
5.5	LIF algorithm	106
5.6	Discussion and conclusion	113
	References	113
6	Energy-efficient Allocation of Real-time Virtual Machines in Cloud Data Centers using Interval-packing Techniques	115
6.1	Introduction	115
6.2	GreenCloud architecture	117
6.3	Energy-efficient real-time scheduling	120
6.4	Performance evaluation	127
6.5	Related work	132
6.6	Conclusions	132
	References	132
7	Energy Efficiency by Minimizing Total Busy Time of Offline Parallel Scheduling in Cloud Computing	135
7.1	Introduction	135
7.2	Approximation algorithm and its approximation ratio bound	140
7.3	Application to energy efficiency in Cloud computing	146
7.4	Performance evaluation	149
7.5	Conclusions	155
	References	156
8	Comparative Study of Energy-efficient Scheduling in Cloud Data Centers	159
8.1	Introduction	159
8.2	Related research	161
8.3	Comparative study of offline scheduling algorithms	162

8.4	Online algorithms	167
8.5	Summary	177
	References	177
9	Energy Efficiency Scheduling in Hadoop	179
9.1	Overview	179
9.2	Scheduling algorithms	182
9.3	Energy control	186
9.4	Energy-efficient scheduling for multiple users	188
9.5	Performance evaluation	195
9.6	Summary	202
	Questions	203
	References	203
10	Maximizing Total Weights in Virtual Machines Allocation	205
10.1	Introduction	205
10.2	Problem formulation: WISWCS	206
10.3	WISWCS	209
10.4	An exact SAWISWCS	211
10.5	Applications of WISWCS	213
10.6	Related work	215
10.7	Conclusions	215
	References	215
11	A Toolkit for Modeling and Simulation of Real-time Virtual Machine Allocation in a Cloud Data Center	217
11.1	Introduction of the cloud data center	217
11.2	The architecture and main features of CloudSched	220
11.3	Performance metrics for different scheduling algorithms	225
11.4	Design and implementation of CloudSched	229
11.5	Performance evaluation	234
11.6	Conclusions	240
	References	242
12	Toward Running Scientific Workflows in the Cloud	245
12.1	Introduction	245
12.2	Related work	247
12.3	Integration	248
12.4	Experiment	254
12.5	Experiment on Amazon EC2	259
12.6	Conclusions	264
	References	265
