|---------------------------------------------------------------------|----------------|
| <i>Preface</i>                                                      | <i>page xi</i> |
| <i>Acknowledgements</i>                                             | <i>xii</i>     |
| <i>About the author</i>                                             | <i>xiii</i>    |
| <br>                                                                |                |
| 1 The world of machine communications                               | 1              |
| 1.1 What defines a machine?                                         | 1              |
| 1.2 Range: short or long?                                           | 2              |
| 1.3 Possible applications                                           | 3              |
| 1.4 Key requirements                                                | 4              |
| 1.5 Market size                                                     | 6              |
| 1.6 How machine communications could change our world               | 8              |
| <br>                                                                |                |
| 2 The need for a new standard                                       | 10             |
| 2.1 Machine communications does not yet have the necessary standard | 10             |
| 2.2 Barriers to delivering a machine communications network         | 11             |
| 2.3 White space as a key enabler                                    | 12             |
| 2.4 Design rules for a machine communication solution               | 14             |
| 2.5 The Weightless Special Interest Group                           | 16             |
| 2.6 Summary                                                         | 19             |
| <br>                                                                |                |
| 3 Working in white space spectrum                                   | 20             |
| 3.1 Defining white space                                            | 20             |
| 3.2 Determining where the white space is                            | 21             |
| 3.3 The 'greyness' of white space                                   | 25             |
| 3.4 Design rules for white space                                    | 27             |

|       |                                           |    |
|-------|-------------------------------------------|----|
| 3.5   | The US regulation                         | 28 |
| 3.6   | The UK regulation                         | 29 |
| 3.7   | Other countries                           | 34 |
| 3.8   | Determining how much white space there is | 34 |
| 3.9   | Regulation in other countries             | 42 |
| 3.10  | Other spectrum                            | 44 |
| 3.11  | Conclusions                               | 46 |
| 4     | Weightless in overview                    | 48 |
| 4.1   | The key requirements                      | 48 |
| 4.2   | Immediate design implications             | 49 |
| 4.3   | Subsequent design thinking                | 51 |
| 4.4   | System overview                           | 54 |
| 5     | The network                               | 57 |
| 5.1   | Introduction                              | 57 |
| 5.2   | Functional elements                       | 58 |
| 5.2.1 | <i>Billing system</i>                     | 59 |
| 5.2.2 | <i>Authentication and encryption</i>      | 59 |
| 5.2.3 | <i>Location register</i>                  | 60 |
| 5.2.4 | <i>Broadcast register</i>                 | 60 |
| 5.2.5 | <i>Base station controller</i>            | 61 |
| 5.3   | Frequency assignment                      | 61 |
| 5.4   | Code assignment                           | 65 |
| 5.5   | Scheduling                                | 66 |
| 5.5.1 | <i>Traffic prioritisation</i>             | 66 |
| 5.5.2 | <i>Normalising power levels</i>           | 67 |
| 5.5.3 | <i>Avoiding antenna nulls</i>             | 67 |
| 5.5.4 | <i>Minimising interference</i>            | 68 |
| 5.5.5 | <i>Overall</i>                            | 69 |
| 5.6   | Calibration mode                          | 69 |
| 5.7   | Load balancing                            | 70 |
| 5.7.1 | <i>Load imbalance</i>                     | 70 |
| 5.7.2 | <i>New cell</i>                           | 72 |
| 5.8   | The network to base station interface     | 72 |
| 5.9   | Summary                                   | 73 |

|        |                                               |     |
